David ,First of all let me clear the air. You and I got off on the wrong foot, for that I apologize. You are an experienced and well read person. In regards to Drake, true he did not have any Texas Stations, but his influence was felt here, sometimes that's all it takes. KONO in San Antonio in the 60's borrowed heavily from Drake ("boss radio comes to mind") and "some" ideas from McClendon. KONO and KTSA had a great battle in the 60's ,and KONO was never beaten by McClendon. Finally KTSA did beat KONO in 1971, but KTSA was no longer a McClendon Station. Yes McClendon did make plenty of errors,but more than made up for it in correct decisions. His promotions were fantastic,and did provoke great ratings. His Dj's had wit, creativity, and truly gave a damn about the station they worked for. I agree David that when the 70's hit McClendon was losing his enthusiasm. KLUV under the direction of his son Bart, did ok but not great. The station that came up and took them was KVIL with Ron Chapman (a McClendon protege') and he beat "the old Scotsman" at his own game. He did it with a stable of the old KLIF McClendon Dj's,, and promotions heavily borrowed from the height of the McClendon era. I know the solid true McClendon style could not work on radio today. You must adapt. You can adapt by using some of the old ideas from McClendon - Drake,and modify a "tad' to please today's listeners. One thing as you said , the talent is for the most part, no talent at all today. All I hear are warm bodies reading liners, or subscribing to "bathroom literature vol.1" for their comedy material, instead of having an old fashion "bull session" in writing truly funny, and dare I say ORIGINAL material!
The idea of McClendon was fresh ideas , great talent, like Charlie van Dyke, Russ "the weird beard"Knight, Ricci Ware, Bruce Hathaway,Mike Selden, Charlie & Harrigan, Hudson & Harrigan. Not "Booby Bondage" as one woman announcer called herself. The book you mentioned about McClendon was a thesis done at Texas Tech in Lubbock, Texas. I had the pleasure of working at KLIF in Dallas but it was own by Fairchild at the time in the 70's. Charlie van Dyke was there along with Randy Robbins, the spirit of McClendon was alive,and the station was fun to listen to and work at. The ratings showed it. One last note I visited the McClendon ranch outside Lewisville, Texas then , "Celo Vista" it was built as studio to make movies,and a few notable ones were shot there, with McClendon as producer. He was a kind and stern fellow, and I was honored to see the history of the McClendon broadcast empire , including the old Liberty broadcast network. That network was used for Baseball broadcasts,that were "recreations' sound effects and all, that McClendon also pioneered.
Yes we need the enthusiasm of the McClendon era,to provide competition to satellites.

Who pays for the ratings services? (this is a question, not an
answer!)

Obviously, the stations and the advertisers both do, but is one side
pulling the majority of the weight?

If it's the stations, shouldn't they have been pushing the services to
make changes so that diarykeepers and the general audience are closer to
the same group?

Either way, doesn't adjusting radio to serve a subset of the total
public reduce the overall value of the medium? (by creating ears which
cannot be reached by any station)

I doubt it highly. RadioWorks is a Sioux City, Iowa based company owned by Cy Chesterman who also happens to be one of the largest CocaCola bottlers in the country as well. I don't remember hearing anything about him owning any out of state properties but it's NOT impossible, again though, unlikely. I'm just waiting for the demise of these stations because of the lack of creativity by Clear Channel. They're down here in Atlanta stepping on their tool as I'm sure they're doing in many US cities, like a tone deaf gorilla with a checkbook. KSEZ was just becoming a great free-form AOR/Hard Rock FM with a great sound and now it's probably going to the scrap heap. Hopefully CC is too busy with all the other acquisitions to pay any attention to it for a few years. I don't fault Cy Chesterman for selling, he probably turned 10 mil or less in initial investment into probably 25 mil.

NMS Radio Program wrote:

> I was just wondering if the MPEG's that radio stations play from there
> computer are they same as mp3 files ?

Not exactly...MPEG is a format/standard. The ones usually referred to audio playback are
Layer II and Layer III, the latter now commonly referred to as MP3. Layer II is used by a lot of broadcast HD systems (ENCO, Scott) and also for data transmission in Codecs (Musicam USA formerly CCS), satellite transmission (Comstream and others). It usually is best at Higher bit rates (128K +for mono, 256+ for stereo). Musicam USA modifes their encoder for better sound. MP3 is a much more sophisticated algorithm for lower bit rates (ie <128K). Primary use has been ISDN codecs (Telos Zephyr) and gives really nice stereo at 128K, using the German modification to the algorithm. Generic MP3 does not sound as good. 64K and up for mono, 128K for stereo. A lot of the MP3's on the web, especially at lower bit rates are pretty bad...My biggest pet peeve is the CD ripped to MP3 and then exploded back to Wav. Nasty! With disc space pretty cheap, Wav or MP2 is the way to go. We use MP3 for HD ONLY for emergencies, ie getting a blown feed from a producer, indy bands that may not have a CD, etc. In addition, with NPR's satellite being MP2, we can go directly into the HD system with the encoded MP2. In addition, there is likely to be a software issue that you may have to deal with in the near future with MP3, similar to BMI/ASCAP licensing type arrangements, so you might want to consider this.

>can...which leads me to my other point.

No, but the time the typical person spends with a particular
technology *can* decrease.

Before radio, everybody read newspapers. Before TV, everybody spent
many hours listening to the radio. These days, newspaper readership
as a fraction of the general public, is way down from what it was just
two decades ago. And my opinion is that terrestrial radio services
are "peaking."

No, radio isn't likely to be displaced. However, expecting solid
growth at even single digit rates isn't a sure thing either.

>Jerry hit it right over the head (thank you, Jerry!), and this is why the

>billing is higher than ever, etc., etc. Terrestrial/over-the-air radio might
>have had its chance if it had 'stuck to the knitting', and stayed "local and
>live".

True, but we can't go back to such regular broadcasts of "local and
live" any more than we can go back to doing regular live radio show
broadcasts as there used to be in the 1930's. It's too labor
intensive and the market is too small.

The pie of public attention is being split by yet another new media.
You can count on only so many hours of a person's time before they do
little else but listen/watch/read stuff made by others. Yes, new
media open opportunities for a person's time in places where it may
not have been practical before. But a person has to go and live a
life somewhere in that equation too.

When XM satellite radio happens, we'll have short circuited that
content source which local radio stations used to have all to
themselves. If they don't go to locally generated content, they'll
lose listeners. If they go to locally generated content, it's going
to cost more. I predict that many financially weak local stations are
going to lose, just as the number of newspapers in major cities began
shrinking as other media took hold.

Frankly I think the market is over-due for a shake out. It will be
about as enjoyable as watching a wreck on the side of a road as you
slowly drive by. You know it's going to be ugly, but you can't help

looking at the carnage.

Once a diary is in a persons hand, their behavour is altered. And the fact
is, no matter what the methodology, stations quickly figure out what
increases survey mentions and sue survey techniques in programming. There is
nothing else tht radio can ask of Arbitron at this time that would improve
survey transparency that would not increase costs, which are high as it is.
>
> Either way, doesn't adjusting radio to serve a subset of the total

As long as advertisers believe the numbers, there is no discussion of
different behaviours by keepers and non keepers. The issue is tracking the
money. And it comes form advertisers. If Arbitron has credibility, then we
follow Arbitron. Both Hooper and Pulse died due to lack of advertiser
acceptance as Arbitron made its way into the agency mindset. Burke,
Accuratings, Birch and others failed not due to bad surveys but to low or
nonexistent advertiser acceptance.

Even in "small-town" radio. Ten years ago, there were four AM radio
stations owned by different entities and two daily newspapers serving
the Lawrence-Haverhill area. Today, there are still four AM radio
stations. Three of them are now owned by a partnership involving the
one surviving newspaper.

It is very easy to increase billing when the rules have changed to allow
you to be the only player in town, but that's a different matter
entirely.

Same thing happens in my industry (computers). Management uses the BS
line "we can't find talent" and goes "offshore" (translation: India) to
find "contract programmers" (translation : indentured servants who work
for peanuts) . In the meantime, there are thousands of junior college
graduates and university graduates who cannot break into the industry.

Hey, how would you like to live in a city of 50,000, with two licensed
radio stations, and not be able to hear any local news? I do. WCCM in
Lawrence tries, but they don't have a full time reporter here in
Haverhill.

Let's keep things in perspective: less than 25% of listening time is spent
nationally in cars. In big commute markets like LA, the figure is only a
percentage or two higher. XM and Sirius are basically mobile services. Won't
work as of now where there is a roof (although wireless LAN technology is
being explored to distribute the signals inside buildings). Terrestrial
radio currently gets about 3 hours a day of per person listening. Oddly,
that is the same as it got in the late 40's before "TV killed radio."

In most cases, terrestrial radio will still be the preferred source for
non-video entertainment. It is simple, cheap and accessable and satisfies
most listener's needs quite well. It's interesting that Sirius and XM are
both targeting 18-34 men as their targets because this is the one area where
there is (and always has been) a degree of dissatisfaction with radio (and
everything else) that can be capitalized on.

It all depends. I don't look for full service from a lite A/C station. I use
different stations for different purposes and don't expect local service

elements on all of them. Some, I just want a nice familar blend of music.
> >
> > Instead, you have station after station playing the same thing town to
town,

So? Sienfeld seems to have worked form town to town. And so did Survivor,
etc. SOme concepts are national, some take on local flavoring. Most don't.

I'd hate to own any of them. The paper has to be congratulated for at least
keeping them alive, given the hardships the press is having (which ar eboht
reader and, mostly, cost related). AMs with puny coverage in this day of FMs
have a hard time.
>
> It is very easy to increase billing when the rules have changed to allow

Actually, consolidation does not per se increase individual staiton
revenues. OK, if the lowballers are bought out, average rates do increase.
But there is a finite value for each listener in each market. It takes sales
skills to overperform, noth just consolidation. In many cases, consolidation
produces clients who say, "I laready bought one of your stations. Why should
I buy any more?"

Oh, just like TV and the Internet? Since when is mere distance an
indication of lack of relevance? Especially in the USA?

The real issue is when the mass-distribution system carries bad programs.
They will fial, and be weeded out.
>

As a kid, I hated the news breaks on the top 40 station. The first thing I vowed to do when I owned a station was to not put news on it if it were Top 40. I did and the numbers showed it (I had a different station for news and talk). The difference now is that there are stations for news, stations for music. Take your pick. OK, some are rip and read but that has always been so.

I'm not Metro's biggest fan, but stations that succeed know that they can have Metro provide the service they want. If they don't want giggles, they say, "no giggles." If they want 90% local news, they say that. And the local PD can train the Metro people assign to him or her. A bad metro service is the station's fault as much as it is Metro's. Metro will work with he stations, and you can get a good product from them plus a deal that allows many stations to have more local news than before! It can be a very good thing if supervised. Again, all about talent.

Now, how about talking about the dearth of engineering talent caused by much higher pay in telecom jobs and other non-radio endeavors? Radio just ahs a lot of new job competition today, and is suffering in several key areas. But it will work out. Hey, wanna buy some Internet radio stocks... cheap???

4048. Re: Radio Will Die

Newsgroup: rec.radio.broadcasting
Date: 2000-09-11 15:38:51 UTC
From: "Cooperstown.Net" <jjslote@mvip.net>
Message-ID: <003f01c01c06$5f6c79e0$3e43210c@default>
Source record: 17554

Responding to David Eduardo

CN> It's to be commercial free, personality hosted, music radio.
DE> No. 50 of the channels will be commercial free, the rest will
be commercial.
DE> Fairly similar to the XM model.

Nowhere did I suggest that Sirius would not offer
commercially supported information programming. That misleading
implication was made by you, in these words:

DE>Sirius, by all reports, is going to be an all-music service
not
DE>unlike the stuff you get on cable.

Now if "not unlike the stuff you get on cable" means
anything, it means no interruptions and no hosts. You've got
something to sell, and you're tarring Sirius as a car version of
Muzak, MusicChoice, DMX. One would never guess by reading your
pitch that Sirius is to have information channels with
commercials, and commercial-free music channels with hosts. One
would also never guess, by your "fairly similar to XM" comment,
that XM music programming is to be predominantly commercial,
reduced in load only by comparison to that ludicrous noisebath
known as FM and AM.

CN> Latin team is Gabe Romero, Mark Bejarano, Lino Igesias.
DE> Totally unknown names in my experience. Who are they?
CN> Jazz is Kenny Washington and Russ Davis.

I mentioned the Latin names not because I recognized them,
but to illustrate that Sirius's "not unlike cable" music side has
already identified some of their hosts. The names I know in
Latin music are at the Ricky, Gloria and Tito level. I do listen
to jazz, and the Sirius jazz hosts are names I do happen to know,
but I was still only illustrating the point that this is hosted
programming, not cable-style musical wallpaper.

CN> I wish XM well as a
CN> stockholder, but as a listener I find their planned lineup
markedly inferior.
DE>The Sirius effort, updated recently, is going to be mostly
DE> light-voicetracked presentations with little personality. It
will be amazingly similar DE>to cable
DE> music channels. XM promises to be somewhat more entertaining
and"different."

The presence of NPR, PRI, BBC, Kennedy Center, Playbill, and truly commercial-free hosted music programming puts Sirius decidedly upmarket. XM will be "different" indeed. I am confident that both services will put on their best face for the early adoptors, but XM is more likely to degenerate, cut price, sound more like AM and FM. Doesn't mean XM won't dominate in the dollar chase; it very well may.

Your piece today on the advantages to the listener of satellite versus traditional terrestrial radio is incredible given your posting history. A business can only give you what you want if it gives you a way to pay for it, and I'm glad you're eloquently championing that position now that you've caught on at XM. Bear in mind though that people really do know the difference between serious analysis and a "where you stand depends on where you sit" sales pitch.

Jerome

The *real* advantage of MP3 is that you actually have what appears to
be a meaningful selection of software to encode and play MP3 files, at
prices ranging from free to expensive.

With RealAudio and Micros~1 Windows Media you're limited to their
proprietary software and you have no real choice. You're stuck with a
limited selection of software, almost all of which is GUIs which are
hard to automate to any degree incase you want to build your own
software that provides any degree of automation and meets your needs
instead of those of a large software corporation.

Patent issues aside (Micros~1's ASF is also patented, but I'm not sure
about RealAudio), MP3 software for encoding and for playing is
available for just about every operating system out there. With MP3
you can use MusicMatch Jukebox and other GUI tools, but command-line
tools that lend much better to any degree of automation you could
possibly want are also available.

<URL:http://www.r3mix.net/> seems to be a good source of information
and reviews on the various MP3 encoders out there. It gives excellent
marks to LAME. In particular, the Analysis section contains frequency
response graphs of some representative sample tracks encoded with
various software.

If you're still afraid of patent issues then someday your answer may
be Ogg Vorbis, a completely open-source and patent-free audio codec
available at <URL:http://www.xiph.org/ogg/vorbis/>. Since Ogg Vorbis
is open-source I'm sure a wide choice of software will become
available.

We're in agreement. Windows Media Player 7 is slow and buggy. But its run-time encoder is a free download, and its compression is really tight, particularly important for memory management on ram portables...and for CD deep archiving. It's also rights-managed, an advantage or disadvantage depending on your position as to the sanctity of intellectual property.

With MS software, you sometimes just roll your eyes in amazement. Used WM Encoder last night to capture the audio of a Real feed...and twenty minutes in WME spontaneously cancelled the encoding, telling me the source material, which was ebbing and flowing a little like any internet feed, was not of sufficient quality. I know the intention was to stop me from putting corrupted material on a server, but I was merely time-shifting for my own use. It was like having a tape recorder turn itself off in objection to the quality of the content, and I found no option to turn off this maternalistic intervention. I had to patch to the cassette deck instead. Just mind-boggling.

I think we were talking about the music channels. Both services are going to offer information or spoken word programming and I was not addressing these. I thought that this was clear, but apparently it was not. So I rectify or clarify now.
>
> DE>Sirius, by all reports, is going to be an all-music service

The recent talk in the industry indicates that some or all of the Sirius channels will be mostly music streams and Sirius is apparently talking up the more music aspect as a selling point.

>One would never guess by reading your
> pitch that Sirius is to have information channels with

> known as FM and AM.

XM will apparently have some commercial free and some commercial music channels; I believed until you questioned it that this was the same model for Sirius. Sirius'website does little to clarify. IOW, I'm not sure but the talk is that the two will be similar in music channel approach, with far less talk and personality ont he Sirius channels.

The impression I have is that the names you listed are programmers, not hosts. Could be wrong, but 3 hosts/jox for 5 services seems light. XM has about 20 hosts for its 5 Latin music channels.

>The names I know in
> Latin music are at the Ricky, Gloria and Tito level. I do listen

Again, the names may refer to programmers, not hosts. I don't know... but 3 hosts for a bunch of channels seems unlikely.

XM follows a model that seems to be what has greater appeal. That being, of course, specialized music formats with an entertaining presentation and lots of special features.
>
> Your piece today on the advantages to the listener of
> satellite versus traditional terrestrial radio is incredible
> given your posting history.

Why? I have always said that channels of delivery will change as technology changes and matures. However, the content providers that are successful will generally be the same providers that we already know and who adopt slightly different approaches to the different appeals of the new channels. For example, either of the satellite channels have the important factor that they appeal to music intensive listeners who don't want local content and

who are what marketing calls "early adopters." It would help that they have higher than average incomes, as the services cost money.

This will be a compliment to terrestrial radio. The people listening to Sirius or XM will likely be those who were prone to listening to tapes or CDs previously, and not, to a great extent, regular radio listeners.

> A business can only give you what
> you want if it gives you a way to pay for it, and I'm glad you're
> eloquently championing that position now that you've caught on at
> XM.

I've "caught on" at XM as of over a year ago. However, that does not mean that I think that satellite will obliterate terrestrial radio. It will be an opportunity to give specific programming to people who do not find it in their own local markets... like a Tejano fan who lives in Tulsa who can not find a local outlet, and is currently buying CDs. Or Spanish rock fans who do not have a single station playing their music anywhere in the US. Or a reggae fan, or a real jazz fan... or a 50's partisan. This will fill in the holes in many markets and probably not detract form mainstream radio. It's complementary, not exclusionary.

>Bear in mind though that people really do know the
> difference between serious analysis and a "where you stand
> depends on where you sit" sales pitch.

I also believe in the possibilities of internet radio. However, if you have looked at the stock market, you will see that nearly no one believes that now is the time. This will be another complementary service, and will be substantially supported in its development by existing content providers.

Isn't it interesting that the leading hard goods internet commerce site is old brick-and-mortar J.C. Penney and not one of the glitzy new offerings? Same thing applies to net radio, satellite radio or some invention just on the horizon.

Source record: 17569

If you're going to be carrying around your laptop, I'd suggest you go with a CD-RW. An outboard unit isn't heavy, and a good, fast one can be had for around $300 (probably less if you shop around). It'll save you the step of having to PLAY the audio. Just dump the .wav file on to the CD, then dump it from the CD into your system at home. Simple.

I was faced with a similar dilemma not long ago. I looked at JAZ drives and ZIP drives. But the ZIP drives weren't always going to be big enough for some of the larger volumes of files I had to move around. JAZ is a better choice (drives hold 1 gb), but I started hearing a few scattered horror stories about JAZ, and it scared me off. Besides, both formats are proprietary, and iOmega (the company that makes both) has been on shaky financial footing in the past. If they abandon the platform, you're screwed.

In the end, I decided CD-ROM was the way to go. Some will say DVD is the preferred method, and there's no question it's the technology of the future. But right here, right now, all computers have a CD-ROM drive, and any computer can read a properly formatted CD-ROM. It's fast, efficient, reliable and you'll be able to use it for years to come. (They still have those little 1.44 mg floppy drives in computers, right? And who's still using those? So you gotta figure that CDs will be around for a while, even while the DVD advocates are singing the praises of the new technology.)

Oh yeah, one other thing...

Mini-discs are NOT the way to go. Though they're an acceptable method for capturing live audio (like a newsradio reporter would), they're extremely unreliable. I've gone through a couple of "nice" Sony MD machines in the past couple of years. Spent hours one night "mastering" some commercials I'd done, only to discover that the unit was "skipping" during the recording process. Wasted a ton of time. One of my co-workers had the same experience with another brand of machine. My company views these machines as "disposable."

DATs are fine, but as I said in my earlier post, you save yourself from having to PLAY the audio if you'll just get a CD burner.

I can't believe somebody would bad mouth mini-disc and then state that DAT was fine....please! I have had nothing but trouble from DAT and we got rid of our machine. It just quit working and even after several repairs it would still just stop working and I have heard other say the same thing about DAT and DAT can get glitches on the tape too.

Mini-disc is perfect for moving audio from your station and home. I work with several DJ that have home studios and they move audio that way all of the time. Burning a CD is not the answer either. A CD burner at one of our stations has major problems and you waste a CD and then find out the burn was bad. Plus many CD's just are compatible with other machines. I used to fight with our Harris player all of the time with CD ROMs.

Mini-disc is basically a high quality cassette-like medium. It is portable, re-recordable and the quality is excellent. My friend at WGN in Chicago uses mini-disc exclusively and even has a player in his car, and with machines getting cheaper in price (because they are in the consumer market) they are the best alternative to anything else for portable audio.

I can strongly second that motion. I use MD's for newsgathering--I
love 'em when they work. The studio machines we use (Denon) are quite
rugged and trouble-free. Our portables are neither.

Our entire news staff is equipped with MD machines, and we don't dare
get rid of the cassette machines we carry as backup.

Dear Mr. Shireman:

Thanks for the tip. I can check it out with my old 1995 Broadcast Yearbook or the FCC web site.

In 1971 I was a vacation replacement engineer for Classical music (then, not now!) KFAC AM/FM in Los Angeles and was in IBEW Hollywood Local 550 if I recall.

I lived in San Francisco many years and was past President and founder of a well known FM there. It is on the air since 1973. Sold it for a lousy $15 million! All kidding aside, I sold it for zero as it is a non-commercial FM. The part about it being well known is true. (grin!)

If you are interested in investing and/or working there, let me know.

Cordially,

Meyer Gottesman

From: Richard Crowley <rcrowley@xprt.net>
Message-ID: <FDEJILKADBILFMFBBBHHEEOLCAAA.rcrowley@xprt.net>
Source record: 17578

All the discussion of Micros~1's ASF and RealAudio aside. I thought the original question, about preserving incoming streaming data is still the open question, or have I missed the answer?

If the data is already highly compressed MP3, ASF, RM, or whatever, whats the point in expanding it out to WAV (or whatever). All the arguments about the amount of disk space it would take seem specious considering how highly compressed the original data is, (not to mention the Gb/$ costs dropping like a rock.) Why not just save the bitstream in the form that it comes in as? You can always play it back using the appropriate client software.

So, is there any software which allows saving incoming media bitstreams to disk files?

Re: Proprietary Iomega formats:

While I agree that Zip is sometimes too small and Jaz has been reported to suffer from the "click of death" and other problems (or was it the Zip?)...

A quick check of Pricewatch reveals that Fuji and Maxell also make/sell Zip disks (one or both probably were the original OEMs)

NEC and Panasonic both make/sell Zip drives.

Iomega appears to have the Jaz disk and drive market sewn up, however.

It was the Zip.

Has anyone considered using CD-R's? I use CD-R's and Adaptec's Easy CD
Creator, which is a great product. (I don't use it to record programming,
I use it to back up my data)

Easy CD Creator has a component called DirectCD which lets you write AND
ERASE AND REWRITE stuff on CD-R's. It accomplishes this by not closing the
CD session after writing.

DirectCD makes your CD-R drive look like a regular, read/write mass storage
drive. It's pretty sweet.

And CD-R's are cheaper, and are supposed to be quite a bit more reliable,
than CD-RW's.

> believe they played light classics or MOR in those days. Apparently talk
> radio now.

VERRRY LUSHHH instrumental music, I recall. In the mid-60s, a female chorus would sing a station ID to the melody of the "Sound of Music". They switched to news-talk around 1970, and I remember Bill Gordon hosting a talk show for several years.

My big thrill was seeing KSON's DJs through a storefront window at College Grove Shopping Center. You couldn't go in but I believe they piped the audio outside so you could hear what was going on. Very spartan studio!

> Not radio, but I remember also visiting KOGO, ch 10 (NBC) which was in the
> slow process of putting in color equipment. I remember that Regis Philbin
> did a saturday night local variety show (long before the days of SNL).

Good old Channel 10. Uncle Russ, Moona Lisa, the KOGO Kangaroo, Al Coupee... but I guess we're drifting OT here.

Jim

I'm originally from there and get back every now and then. I was around Labor Day weekend and the station was smoking with loads of great metal and hard rock. Sounds like the jocks had free reign and put an extra shovel of coal in the cooker. I heard great stuff on Z98 that the only rock station in Atlanta wouldn't dare to play because they're pretty gutless. Tap some of that CC money and put the Z live on the web, it'd beat anything we have in Atlanta. Sounds like Cy let the radio people do their jobs, hope your new owners do the same.

This thread keeps coming up. It all depends on what your audio is for, going to become, and how much time you have. If you are going to archive it, go down generations, transmit it or compress it with compression schemes, and especially if the recording is of a critical or there is a question of quality, DAT really is the way to start your recording. MD does use a compression algorithim, that falls apart quickly in multiple passes to MD or if you transfer it via MPEG. I look at MD two ways...it can be a cassette recording in the field, or as the "cart" . Neither are archiving or high quality media. Our archives used to go to reel or the quality material was recorded on reel tape. Today, DAT, CD are long term, and we use HD for day to day stuff. MD is another blade in the audio swiss army knife, and it has good uses. Would I record music on it for later editing and rebroadcasting, ie a concert, classical or pop....Likely Never. Would I use it for a soundbite or RENG application, yes. The rule is to not compress when you can, as you do not know what the end result of your audio product may be down the road.

software.

I don't know the true technical answer, but I can tell you
the seat-of-the-pants common sense answer. If you want the true
bit-perfect source file you can try to FTP it. But you're likely
to find that it contains multiple quality streams, index
information, and instructions to the server as to how to respond
to changes in net condition. On the inbound side, by the time
your audio starts to sound, there's likely a raft of preamble
information already in the buffer. Capturing to WMA or MP3
creates a coherent, properly structured local file, whereas
capturing a segment of the data stream would probably be no more
useful than capturing a segment of the data stream that, properly
and completely assembled, eventually forms an HTML screen.

Besides, I think the original question pertained to capturing
audio, which I think suggests a line or mike level analog signal,
not a digital data stream.

I've been experimenting with audio archiving over the past few
days, and have some new results to report. RealJukebox, which
you can download free with RealPlayer 8.0, has the capability to
capture to a number of formats, with appropriate codecs,
including MP3, RM, and WMA. It has a slider to control CPU
usage, and the capture tended to break up unless I ramped the
slider up. MP3 seemed the most reliable as well as the most
desireable; but RJ failed my encoder stress test; I set it to
record line audio last night, and it went into an audio loop
about thirty minutes in.

Windows Media Encoder 7.0 has proven bloated and finicky. I
think I'm doing much better with WME 4.1, which comes as part of
a download called "Windows Media Tools." It has capabilities
that have been removed from WME 7, including the ability to limit
your capture by time or file size. It has a much more attractive
and understandable UI than 7. It saves to ASF files that appear
to be almost as compact as the WMA's. And it does something else
essential that I was not able to accomplish in RealJukebox; it
captures the output of your WAV generator, as well as line input,
CD and mike. Which means you can use WME4 to capture the audio
from a Real presentation as you receive it off the web.

It doesn't save to the greatest choice of filetypes, but
WME4.1 hasn't yet failed me in operation; I'll let you know if it
does.

Around this time I worked weekends at KBAB, later KDEO, licensed to El Cajon on 910 kHz 1kw DA2. It had a low-rent transmitter shack out in Santee. (3 owers) Understand they built a high school out there later. Now has 5 kw. I was in Navy at Miramar. Played LP instrumentals from 7pm to MN with voice tracks by John Edington on his days off.

It's also interesting to note that none of the european countries do not have vanity or personal license plates too. When showing pictures of America to my German cousin one included part of my car with the personal plate showing . She was interested and did not know you could get them that way. She also noticed the plate size was square unlike the rectangular style used in europe.

From: "Steve George" <steve.george@z98rocks.com>

Cy Chesterman does own two stations in Jamestown, ND but nothing else. Just out of curiosity Jeff, if you are in Atlanta how do you know about KSEZ? The guys at the "Z" got a kick out of what you wrote.

Steve George
Chief Engineer
Radioworks/ Sioux City (Soon to be Clear Channel Sioux City)

I can only hope that CC keeps minimum control of these stations. I actually live closer to the Sioux Falls market, but listen to KSEZ more often. Their free-format has been so refreshing compared to the 50 song playlist that all the SF markets endorse.

Also, the "80's Saturday Nite" on KGLI is a program I rarely miss. To me, it's the best original programming on the dial 'round here. Give ol Kev a pat on the back for me, and let him know there are people out there who appreciate a jock that can have fun with the listener.

Drew, didn't you work for KGLI back in the mid 80's?

Doug Smith <w9wi@bellsouth.net> wrote:

"I would suggest it's mostly inertia that keeps it on the books."

That and the fact that the FCC and the public need *some* way to identify a station, other than that "it's the one people around Nashville get on channel 4." As an example, in Britain the independent TV and radio stations have officially registered names (such as Border Television or Virgin Radio) and have to get permission to change those names, so that for example Granada Media can't just change the name of London Weekend Television to "Granada London," but rather has to go to the Independent Television Commission for a name change just as an American station has to file with the FCC to change its call.

"Personally, I see absolutely no reason FM stations should be required to ID if they're transmitting their calls in their RDS stream."

They could, and TV stations could ID in XDS (or PSIP for DTV). But that would not enable the *public* to identify the station they're watching/listening to, except for people with the right decoders. (Very few people have RDS FM receivers, though a fair number of newer TVs have XDS display.)

Also, allowing FMs to do this arguably wouldn't be fair to AM stations, which would still have to ID aurally because there is no comparable data transmission system for AM (though IBOC would probably include such a thing).

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been

broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Use file numbers. For example, the new station granted today for 92.7
in Dickson, Oklahoma was assigned the file number BPH-19970819MB. That
could be its permanent handle at the Commission. Or, keep callsigns,
but don't require stations to use them on the air.

> They could, and TV stations could ID in XDS (or PSIP for DTV). But that

The way many stations bury their calls, I don't see that the legal ID
accomplishes that anyway. If it was felt important to ensure the public
could file comments about the operation of a station, maybe stations
that don't air legal IDs could be required to announce the location of
their public file, or a mailing address and/or phone number at which
comments could be filed, at regular intervals.

I suppose AM stations could be allowed to frequency-shift their carriers
to send their callsigns in Morse Code.

910 kHz 1kw DA2.
>>

Was 1 kW DA-2, then 5 kW-D, 1 kW-N DA-2, now 5 kW DA-2.

Only a little more than 100 miles from the existing unlimited time station on
910 in Oxnard.

Incredibly, a Class B (unlimited time) station was recently fitted in between
the Oxnard and the El Cajon (San Diego) stations. It's out in the "high
desert".

4100. KJFK Austin now "The Hill" KHHL

Newsgroup: rec.radio.broadcasting
Date: 2000-09-13 09:01:59 UTC
From: familiacantu@cs.com
Message-ID: <20000913050029.28941.00002187@ng-cg1.news.cs.com>
Source record: 17456

Hot talker KJFK 98.9 is now calling itself ''the Hill KHHL-- rock without the hard edge.'' It's kind of a smooth classic rock. One listener tells me they pulled the plug on the talk format in the middle of the Howard Stern Show.

KHHL is a standalone rimshotter licensed to Lampasas Texas which is about 60 miles NW of Austin. KJFK was formerly KLTD and KUTZ and was oldies and Z-Rock among others before settling on Hot Talk.

I have written a very basic playlist generator software for our radio
station. The main goal was to make it easy to use.
The programm scans a directory and all subdirectories for mp3 and wav
files, randomizes those and inserts jingles after every x files. After
that it starts winamp with this playlist.

What would kind of playlist generator do you need?

Kind regards,
Gernot.

The following was on today's "Shoptalk" broadcasting e-zine, credited to USA Today.

###BEGIN EXCERPT###

Rambling with Gambling, the longest-running radio show in America, has rambled for the last time. WOR decided not to renew the contract of John Gambling, whose grandfather originated the show 75 years ago. Although the contract does not expire until December, Gambling decided that Monday would be his last program. "I just could not see myself day after day dying a slow pathetic death," he said. Gambling continued the tradition of news, interviews and lighthearted talk started by his grandfather and continued by his father. Gambling joined his father as co-host 15 years ago and took over as the main host 10 years ago.

###END EXCERPT###

Source record: 17461

BEE Multimedia has introduced a new system, one which will broadcast radio on the net without a player or a plug in. It is in real time and not an encoded broadcast. The quality is great.

The systems also broadcast television, netcasts, etc. Stop by and have a look, there are many samples.

I think someone else was talking about using winamp to run a station a while back too. The only real difficulty I can see cropping up is that there isn't any chance for overlapping the songs (unless there's a plugin I don't know of.) How does it sound on air?

>when do they listen? what do they listen on? what is "prime time" in
>internet radio?

I doubt they've learned much that can be relied on. The number of stations included is a tiny fraction of those webcasting. Until every webcaster is included there can be no comparison of stations. Every number will have to have a disclaimer "These number do not represent the entire market. Only those stations who've chosen to participate are included in the results.

They can tell us how many streams were requested for a particular audio source and how long they listened, but can't make any market comparisons.

No one can claim to be #1 without the disclaimer "of the stations surveyed." I doubt an advertiser has any interest in the claim that "Praying Mantis 104" is #1 on the net when he's concerned about selling cars in Visalia, CA. What he needs to know is where does the station rank in Visalia.

If Yahoo Broadcast streams a large number of major stations and they don't participate in the survey, the survey means virtually nothing to anyone but the writers of puffy press releases.

Again, because of the broad reach of the Internet, and the nature of webcasting, "market share" may not be relevant. However, unlike radio or the broadcast media, webcasters can know EXACTLY how many people are listening and when.

Also, webcasters (not to be confused with broadcasters who just dump their signal on the web) are not going to have the locality of radio. Therefore, the guy selling cars in Visalia may not be concerned about the 'net. If his ad hits the web because a Visalia station has opted to puke its signal onto the web, the car dealer should be told "it's a bonus" and he shouldn't worry about it, he's getting it as an extra.

Webcasting will work - it's just that some in the radio industry are having a great deal of difficulty understanding that it isn't broadcast radio, and whatever it turns out to be, it will not follow the broadcast radio model. It's got a lot of evolution to go through.

Since virtually everything that's being webcast has the radio model as
its basis, I think it's the Webcasting industry that doesn't
understand its own model. Broadcasters on the net usually don't expect
much from the net in terms of large audiences. Right now most are
simply experimenting. Their advantage is that they have programming
with professional production values and use its promotional value
rather than its sales value (undetermined).

>does.

Turns out WME4 failed the line encoder stress test as well, going bust after about 4.5 hours.

The good news is that there's a clear winner in the encoder sweepstates. MusicMatch Jukebox 5.1. It's closest to a VCR in interface, names and manages your "tracks" for you (WME has no concept of a track; you encode to a files, which you manually rename and rename and rename every time you click "record"), and has encoded acres of line audio into MP3 flawlessly for me thusfar, even keeping what it had as a usable file after a full disk error. If you go to the web site you can check the Editors' Choice awards and reviewer raves on it, accolades with which I concur. The shareware version does the trick for line encoding; the $20 version offers improved CD encoding.

Interestingly, MJ5 line recording to MS's ASF format created chopped up, useless files. I think it uses a Microsoft OCX to do this. Line audio is tough to encode on the fly; unlike CD or Web the signal keeps coming and coming, whether you have the processing power ready or not. MP3 must demand less of it than ASF; even RealJukebox8, ultimately unsatisfactory either way, was less of a disaster encoding MP3's.

A good strategy may be to use MJ5 at its highest quality level for real-time encoding to MP3, then use WME4's batch conversion capability to create ultra-compressed ASF files that will then also work with WME's slicing, extracting and merging tools. Not to that point yet but will advise if this strategy works anything other than flawlessly.

Source record: 17474

MTSU (Middle Tennessee State University) has two stations, WMOT 89.5 FM (a jazz/NPR format) and WMTS 88.3 FM (student run free form radio). I know they had some shows that played tropicales..they still do as a matter of fact.. I was Tech Director at WMTS for four years and Production Coordinator at WMOT for 5...WMTS has had a variety of shows over the years...

Now.....810 AM WMGC (which ironically was formerly WMTS 810 AM) has Nashville based Spanish programming during the day and a simulcast of WNSR 560 'Sports 56' from Nashville at night...very strange combination ...I'd prefer it go back to being locally programmed (i.e., studios based in Murfreesboro...the city of license)....maybe mix of Spanish and English programming....this area is starting to develop a large Hispanic population.

Regards,

Matt Lane
Quad4 Productions

Go to Winamp's website (winamp.com).. There is a crossfading plug in which
can make Winamp 'segue' songs (based on audio threshold levels only,
unfortunately). I can't remember the name off hand...it does a decent job.
Make sure you have a machine that can handle it! Running this plug in on
Winamp for an extended period of time on anything lower than a 450 MHz will
cause the machine to lock up...:/

From: Bumper Morgan <bumpermorgan@mindspring.com>
Message-ID: <8pqvloejk1@nntp9.atl.mindspring.net>
Source record: 17476

Hello.

I use Cool Edit Pro to record internet radio, local AM/FM, TV audio and of course bumpers for my business www.bumperproductions.com

CEP has a timer that will stop the recording when I want. The timer also can begin recording 24/7. The set-up is real easy and it has expanded my love for the audio medium many times.

I've become a loyal listener to www.wabcradio.com I also really like the UK's Virgin Radio and CFRB, Toronto. KQV in Pittsburgh is using the old news stagers and sounds great.

I also use a product called http://www.radiowebcaster.com/cgi-bin/al/affiliates.cgi?10051001 This nifty little device broadcasts the signal from my soundcard to any FM radio within a 300 feet. So instead of just listening in spurts, I can now live with these stations on a daily basis even though I'm thousands of miles away.

Also, we just networked or computers via phone jacks using http://www.linksys.com with a DSL connection our set-up really smokes.

I hope this info helps someone out there to enjoy listening even more, very exciting times we live in.

Drop me a line.

Take Care,

The Bump!

Obviously it's still in an experimental stage. And obviously the radio biz is just using for promotion and not a vehicle in itself. No one disagrees with that.

It's just probably going to evolve along a different track than radio. It has to. As we've said before, webcasting has certain advantages over radio. On the other hand, radio has certain advantages over webcasting.

They're two different birds.

This sounds *very* inefficient and unreliable to me. For on air use it *has* to
work reliably. And locking up on anything less than 450mHz???
FYI - I've developed software that runs a station overnight that, if needed,
can work on an old '486 at 40 mHz. with overlapping sound files. Since it's
still in development it's not yet ready for the public.

Peter <peterh5322@aol.com> wrote:

"NBC could have had Ch. 4 in Chicago, but it was deleted and moved to Milwaukee and Bloomington (IN) after the merger of ABC (Ch. 7) and Paramount (Ch. 4). NBC (WMAQ-TV) had to settle for Ch. 5."

By "Paramount" I assume you're referring to United Paramount Theatres, which merged with ABC in 1953, bringing WBKB along with it; since WBKB had been founded by the Balaban & Katz theater chain, it went to UPT when that was spun off under the consent decree, while Paramount Pictures kept KTLA. It's interesting that ABC kept the WBKB call sign, not WENR-TV which had been the call on channel 7; dunno what else they kept from WBKB and what they kept from WENR-TV (staff, studio location, equipment, programming rights, etc.)

Incidentally, the capital cities of the Australian states are so far apart that they all have the same TV channels assigned, namely 2, 7, 9, 10, 28 and 31. That's why the three commercial networks there are called the Seven, Nine and Ten Networks respectively; the Australian Broadcasting Corporation is on channel 2, channel 28 is used by the Specialized Broadcasting Service (multilingual and cultural programming), and channel 31 is used for community stations that (from what I've heard) tend to operate on shoestring budgets with volunteer staff.

Hi everyone...

I am student at The University of Tennessee Martin and I am currently airing a morning show CST from 7:30 to 10:00am if anyone is interested. It is the International Music Morning with Scott and Miho and we would like to invite you to listen- click | http://www.geocities.com/scottcloar or ease your way through http://www.utm.edu to the radio station's page. I hope you can find the time to listen and tell us what you think!!

We will be waiting for you!
Scott

ps: also, of course, we are looking for jobs/internships- hint hint.

Hello,
I go to school in Tennessee and haven't heard about this- however- I don't know if they still do but on the campus of MTSU they have (or used to) have a station that played tropicales (salsa, merenque, bachata) It has been a year or more since I heard it- so I am not really sure if they are still doing that.
Also, on that note- in the mornings of Monday Wednesday and Friday- on the campus of The University of Tennessee Martin, 90.3 WUTM- we are airing an International Music show featuring music in mostly Spanish and Japanese (and more over English) and of course we have Portuguese, Italian, Mandarin, Cantonese, Korean, French, German, Dutch.....let me catch my tongue here.....and you can hear us via Real Audio on http://www.geocities.com/scottcloar or savvy your way through http://www.utm.edu to our radio station's page.
If you want to know more just ask me because I am the host of the show.
Talk to you later!
Scott

>Easy CD Creator has a component called DirectCD which lets you write AND
>ERASE AND REWRITE stuff on CD-R's. It accomplishes this by not closing the
>CD session after writing.

Not exactly true, you can write and re-write to a degree, but not erase.
DirectCD writes the table of contents on your hard drive until you close the
project. This enables you to remove the CD and come back later and add to
it. You can even change info but it doesn't erase the data. If you change
data, it just adds new data to the CD but the part that was written to does
not get overwritten or become available again. Once the sectors have been
written to, they are lost forever... those sectors are just removed from the
table of contents. If you do a lot of changing on a CD-R, it is possible
for you to have a CD-R with only one 50 mb track, and no free space.
Another problem with DirectCD is that it can only be played on the machine
it was recorded on (since the table of contents is stored on your hard drive
rather than the CR-R), therefore you can't use it as a caddy to move stuff
from home to the studio.
Of course if you buy CR-RW's then everything you say is true, but they are
more expensive.

There is another way to run a radio station: http://www.drs2006.com
It runs on a Pentium II 233, or Celeron and it overlaps songs with one
soundcard.

4129. QUESTION-Live Performers as Air Show Hosts

Newsgroup: rec.radio.broadcasting
Date: 2000-09-15 00:00:00 UTC
From: Roy Cunningham <music@harborside.com>
Message-ID: <hkmw5.8999$SN6.254063@news4.giganews.com>
Source record: 17486

--
Roy Cunningham - CatPig Studios
Everything You Need for
Commercial and Private Broadcast
Production, Presentations, Original
Music Composition

I'm trying to research a situation and would appreciate any help concerning history(ies) of live performers successfully hosting rock programmimg.

I know there are people doing this, Dave Koz, I believe is the first example that comes to mind.

I'm part of New Northwest Broadcasters in Astoria, Oregon. Currently, I'm composing custom music beds and voicing commercials for many clients. It's having a positive impact on the stations' (we have six, soon to be seven) audience response.
Many jingles are actually being quoted (sung) by listeners. Clients are happy with the results. Management is too !!!(Fortunately for an old hippie)

As management makes space for me to be on air, I'm trying to compose a document citing instances in which live performers (of note) have had a positive impact for the stations they worked with.

I actually have far more experience as a live performer. I played with quite a few of rock's "stars" in L.A. for over thirteen years. Most notably, I formed a trio with Ed Cassidy of Spirit and Larry "Fuzzy" Knight (Bonnie Raitt, Derek & Dominoes, et al).
We were quite good although nothing major came of the project. Yet, we managed to have an impact on the local scene when blond haired, beauty star rockers were in vogue.

I know quite a bit about rock music and have had experience as a jock on KBOO (90.7) community radio in Portland, OR. The show was a midnight to three AM slot and was quite well attended. I played much deeper cuts from "classic" rock bands and also featured progressive, fusion and traditional jazz and blues (modern and traditional). Frank Zappa's collection was a feature from 0200 till end of show.

My shows always featured interviews with performers. My interviewing style was very comfortable for them since we were both (or all) coming from the perhaps more intimate viewpoint of what it's like to be out in front of people playing what you feel coming from your thoughts. (I'll spare you the more esoteric "where it comes from" version here)

I had many groups up in Portland some of them were Chambers Bros.- Band from Utopia - and Mike Keneally. All the shows were successful.

SO ..... if you have information to share about similar situations that have resulted in successful rock air shows I'd apprecite your relating them.

One upper management person is a fellow named Scotty Brink. I met with him and found him to be a very cool guy. He's apparaently had experiences (musically) similar to mine. I think he'd enjoy a well thought out presentation with some of your "war stories" in there too. My local management is also quite supportive. I know they must act with that almighty dollar as topmost factor. After all, I want to get paid too.
And I'm having a lot of fun. I do love radio !!!!! (especially the old time hard rock shows).

Thanks A Lot !!!!

Roy

Here is a great example of the stupid, meaningless, and flip type of comment that has become rampant on this ng. A radio broadcasting dynasty ends after seventy-five years, and from his mean little position a barnacle beats his tiny chest and excretes this kind of comment.

Personally, I'd love to hear about this event and the Gamblings from Rich Wood... but I don't think he even checks in here anymore considering the dreck from the amateurs he's had to wade through on this newsgroup.

To answer the comment about Winamp running a station. That crossfade plugin is horrible. It sounds really bad when it does decide to work. Right now my internet station located at www.alpsonline.com/hotfm is ran by just editing the end of the songs so so as soon as the song is done there is no more file still playing. In other words tightening the song. While some of my songs might have not been tightened most of them have so you might want to give a listen.
However I just reformatted my hard drive last night because ya know Windows sucks so the station won't be on the air until Midnight tonight EST.

Two things you learn very early in any media business are that you
can't please everyone and everyone is a media critic. You try to find
a large enough niche to please enough people to make a business. The
others are going to criticize every move you make. It comes with
broadcasting like robberies go with banks.

When you respect the background and the intentions of the critic you
might look back and see if some of the comments have merit and might
find something in the advice that could improve the product. Most
often it's criticism to sell a newspaper or impress someone in a
newsgroup. None has any value to the target of the criticism.

>Personally, I'd love to hear about this event and the Gamblings from
>Rich Wood... but I don't think he even checks in here anymore
>considering the dreck from the amateurs he's had to wade through on this
>newsgroup.

The numbers weren't good. A contract was coming up for renewal and a
decision was made not to renew it. To move on. Personalities with
contracts don't get fired. They're hired for a specific length of
time, with an end date. When the contract approaches its end,
negotiations to renew it begin. Both parties have the right to
negotiate new terms or let the contract end naturally.

WOR has more tradition behind it than almost any station in the
business. Many traditions have been ended over the years to allow us
to meet the demands of the marketplace as all businesses must.

In my estimation, John Gambling is both a pro and a genuinely good
man. He's a friend. The decision was a business decision and bears no
reflection on John Gambling's professionalism or integrity. Because of
that integrity, WOR allowed John to say goodbye on the the air on the
day he chose. Since then, WOR has allowed listeners to comment on the
air, as they wish. We've allowed listeners to grieve publicly. I think
that's rare in our business where personalities usually just
disappear.

This isn't an easy situation for anyone concerned. We're trying to
handle it in a way that's humane and respectful to John and his

listeners - In a way that allows WOR to move on as it sees fit.

Hey, I listened to the middle John, albeit owing to the clock radio turning off
after Jean Shepherd, but he was okay for the day, I guess. March around the
breakfast table and all that.

On visits to NY from time to time I've found the last John unlistenable completely.
God almighty. Perhaps you had to stay tuned in from the late 60s not to notice,
like a frog being boiled.

Imus's comment, and not just recently, was that Gambling couldn't send an audition
tape anywhere in the country and get a job today. He said it as an addition
to the same comment about Francessa, not as an original attack; but he repeated
it a couple of days ago.

The thing about traditions is that you have to choose them, or they're not
traditions.

Why not let him say goodbye to his listeners even if he's a jerk?
That would seem to be the moral imperative.

What you're saying is that you were sure he wouldn't say anything
bad about you, so you let him say goodbye.

Imus invites you on the show if he replaces you,
to say goodbye; he has a firmer grasp of the right thing than
the average PD.

It's rare owing to the character of PD's, not the character of hosts.

1. You've confused him with Don McNeil.
2. Who cares about Imus?
3. Who's talking about tradition?
4. You ought to change your tagline.

WinAmp needs at least a 450 MHz CPU to do cross-fading? HA! With MPXPLAY for DOS, you can do crossfading on as little as a 75 MHz Pentium! In fact I use MPXPLAY to run my low-power AM Stereo radio station. It automatically randomizes the playlist, and with cross-fade and automatic volume control, I have over 15 hours of continuous, commercial-quality repeat-free music stored in about 800 Mb of hard drive space.

For more information on MPXPLAY, including a free download of the latest version, see: http://www.geocities.com/mpxplay

Hi,

I used to DJ at a rock station and we used to get this cool magazine called HITS. I would like to collect a few of these... I just threw them away when I worked, now I'd love to have some. Anyone out there know where I could get some?

I'll pay for 'em I guess.

Hello Everyone

May I please ask for your help. I am sorry to be a little off topic, but the other newsgroups devoted to radio seem to be a lot less popular than this group.

Could you please tell me the names of shock jocks like Howard Stern, Don Imus, Mancow Muller? It would also help if I knew the names of the radio stations they work for. Would you know of websites/newsgroups where I could find this info?

Thanks a lot, I would truly appreciate your help!!

> One time I even heard a station on *104.7* call themselves "105"!

Seems pretty silly to talk about what radio stations call themselves,
but what the hell.

A decade or two ago you'll find it wasn't that rare, at least not in
Louisville. In the 80s we had ``KJ-100'' and (IIRC) ``Magic 100'' on
99.7, and 95.7 WQMF used to call themselves ``96-QMF''.

Hell, *today* we have ``B-96'' on 96.5 and ``97 WAMZ'' on 97.5, which
seem more egregious to me.

IIRC, 1080 AM WCII in the early 80s once called themselves ``Country
11'' or some such thing, and you could call their studios at 571-1111.
Any other examples of dial-rouding on AM?

Back in the old analog tuned radio days, most receivers were calibrated
in units of 10 kHz, not 1 kHz. Thus the dials _did_ read 55, 65, 80,
100, 150 or 160 ....

WBAL in Baltimore still refers to themselves as "Radio 11." although
they're on 1090. Perhaps this is used as a connection to WBAL-TV,
Channel 11. A bit antiquated but it doesn't seem to bother anyone in
Baltimore.

I live in an area where the first Top 40 on FM at 105.7 called
themselves 106. As a result, the next developed FM (a Country station
on 106.7) chose to call themselves 107. Another station on 107.7
(also Country) then called themselves 108. This went on for years.
Finally the station on 105.7 changed format and started using their
actual digital dial position and within a year or two everyone else
had fallen into place, using their actual frequencies. Rounding off
seems kinda goofy now but when 105.7 started using 106 in 1974 nobody
had digital radios. In retrospect it made sense.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform
involves all different kinds of music, including jazz, reggae, blues,
hip-hop, country, rock, and just about everything else under the sun.

Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

Not boring at all. However, I've learned to multitask. Besides,
defeating this twit filter was a cinch.

Greetings,

The Indianapolis Broadcast Dial site has a new home on the Web:

http://members.home.net/mobilene/IBD.html

The site lists all the radio and TV stations that serve Indianapolis,
with links to FCC database info, station Web pages, and streaming audio
and video.

Peace,
jim

4170. Floydian Slip FLASH: Site redesign

Newsgroup: rec.radio.broadcasting
Date: 2000-09-20 00:00:00 UTC
From: "Craig C. Bailey" <ccb@floydianslip.com>
Message-ID: <a05001900b5ee4e1d6906@[208.13.202.154]>
Source record: 17431

Two months in the making, the "Floydian Slip"(TM) Web site has been entirely redesigned.

With more than 15,200 words of original editorial content detailing Pink Floyd's recording history, artwork scans and song lists from every Floyd and band member solo album, and close to 70 RealAudio cuts, "Floydian Slip" has grown to be one of the most popular Floyd resources on the Internet -- taking upwards of 33,000 hits a week.

If you've never visited, now's the time; if you're a regular visitor, drop by and see what's new.

History:
"Floydian Slip" v1.0 debuted in spring 1995. In September 1996, the site moved to its own domain. In late 1997, v2.0 debuted, with more editorial content, audio cuts and images. On Sept. 20, 2000, v3.0 went live, with an entirely new design and interface.

4172. Re: Gambling Stops Rambling

Newsgroup: rec.radio.broadcasting
Date: 2000-09-20 00:00:00 UTC
From: isobar@bcpl.net
Message-ID: <oV3y5.231$cv4.89032@news.abs.net>
Source record: 17433

Rich Wood commented on the end of John Gambling at WOR:

>[...]
>The numbers weren't good. A contract was coming up for renewal and a
>decision was made not to renew it.[...]

>WOR has more tradition behind it than almost any station in the
>business. Many traditions have been ended over the years to allow us
>to meet the demands of the marketplace as all businesses must.
>[...]
>
>This isn't an easy situation for anyone concerned. [...]

Rich gave a nice exposition on why and how WOR is dropping the
long running Gambling show. He didn't need to do it; most
people involved in such things get bureaucratic and keep their
heads down. So, thanks, Rich.

I'm sorry to see it happen. I used to listen to John B and his
little rinky-dink orchestra when I was a toddler, and still
tuned in when I visited the home folks in L.I. over the years.
Even listen to the strong WOR signal here in the DC area every
once in a while.

But what will WOR's tradition, which I guess translates to the
demographic they shoot for, accept to replace Gambling? Will the
same folks who listen to WOR's other shows accept a shock jock?
Do they have an Eddie Gallaher in the wings? Supermarket music?

All shows wear out - some quicker than others - and the various
Gambling incarnations surely had a good enough run. When
the numbers drop I assume the revenue does, too. What are
they going to do to bring them up again?

Similar to my experience with the old 102-WPIX in New York. Couldn't figure it out for a few minutes when using my first digital radio. Ended up sitting on 102.3 (WBAB/Babylon NY) and thinking "that doesn't sound like WPIX."

Today the station is smooth jazz CD-101.9

> $100,000...

It should be noted that agreeing to drop an application in return for a payoff is extremely illegal behavior in the new era of broadcast spectrum auctions. I think the term for this is "collusion", and can result in severe fines.

In the past, applicants could accept money from other applicants for the same channel to drop their applications so that everyone could avoid the expensive and slow comparative hearing process. This saved money for everyone -- including the FCC. Now, however, the goal of the spectrum auctions is to maximize the payoff to the government, not to other applicants, and the rules have changed substantially.

Bottom line: if you follow the advice in the message that I quoted, you could get into deep crap at the FCC, so don't do it.

I would also point out that the folks that will be hurt by the sort of strategy that the post basically encouraged are other would be small broadcasters who can't afford to get in expensive pissing contests at the FCC with applicants who are trying to use the system to extort money from people who are actually interested in starting a station.

Back in the mid-80's simulcast era, KELI (1430 AM) Tulsa and the FM
sister (I can't recall the calls) on 92.1 used the "14K and the new
92K FM" moniker...

Tulsa also had a "Love 98" at 98.5 (KCFO?), a K107 (then KAYI and now
KHTT at 106.9), and the legendary Classic Rocker KMOD used 97 1/2 for
many years...

To this day, KKIX, Fayetteville, AR uses KIX104 as a moniker, with the
assigned frequency of 103.9.

4185. Floydian Slip FLASH: New Roger Waters CD/DVD

Newsgroup: rec.radio.broadcasting
Date: 2000-09-21 00:00:00 UTC
From: "Craig C. Bailey" <ccb@floydianslip.com>
Message-ID: <a05001901b5f02a9e1b37@[208.13.202.72]>
Source record: 17441

This just in. Pardon the promotional language: This is straight from roger-waters.com, and, in an effort to get it out as quickly as possible, it's presented here word-for-word from the site:

Columbia recording artist and Pink Floyd founder Roger Waters toured the United States for the first time in 12 years in 1999-2000 with his highly-acclaimed "In The Flesh" show which presented, for the first time, a comprehensive overview of Waters' music including: early Pink Floyd material; classic compositions from his masterpieces "The Wall" and "Dark Side Of The Moon"; less well-known pieces from "Animals," "Wish You Were Here," and "The Final Cut"; songs from the solo tours de force "Amused To Death" and "The Pros and Cons of Hitch Hiking"; and the debut of a new song "Each Small Candle." The overwhelming demand for tickets made every performance of "In The Flesh" an SRO event. On November 21, Columbia Records will release the eagerly anticipated "In The Flesh," a two-CD recording of the entire live show (drawn from performances in Phoenix, Arizona, Las Vegas, Nevada, Irvine, California, and Portland, Oregon) and Waters' first full-length release since 1992's "Amused To Death." A deluxe DVD version of "In The Flesh"--featuring a Hi Definition live concert video with 5.1 Dolby Digital and LPCM Stereo music mixes, a 30-minute behind-the-scenes documentary, band biographies, still photographs, projected images, lyrics, and more--is currently in the works with a release date TBA.

"In The Flesh" is produced and mixed by longtime collaborator James Guthrie, who has worked on Waters' music since co-producing and engineering "The Wall" in 1978 and has remastered the entire Pink Floyd catalog. Guthrie recorded the concerts as a 48-track analog recording before mixing it down to high resolution digital. "I just like the sound of analog," says Guthrie. "It's much more resolute. It's more real. It breathes. It's more three-dimensional."

Appearing with Roger Waters (guitar, vocals, and bass) on "In The Flesh" is his band of top-flight musicians including Andy Fairweather-Low (guitar), Snowy White (guitar), Doyle Bramhall II (guitar and vocals), Graham Broad (drums), Jon Carin (keyboards), Andy Wallace (keyboards), Katie Kissoon (vocals), Susannah Melvoin (vocals), and PP Arnold (vocals).

"The strength of this record," Guthrie says, "is to hear Roger performing such a great cross-section of material from very early Pink Floyd, i.e. 'Set The Controls For The Heart Of The Sun,' to more contemporary Pink Floyd to Roger's solo career. It's a very dynamic performance. They are all important pieces of music."

Throughout the U.S. tour, critics praised the power of Waters' performances, the timelessness of his music, the show's intimate production values and seamless structure. The San Jose Mercury News reported that the show "was rock as art, with the kind of concern for sound rarely seen today." And the Fort Worth Star Telegram raved that "his long, luscious two-set show made up mainly of Floyd classics was on a more human scale? this show felt like a celebration." The Los Angeles Times was equally enthusiastic and wrote, "the show illustrated the extent to which Waters operatic rock has influenced generations."

Tracks on "In The Flesh" include:

1. "In The Flesh" (from "The Wall")
2. "The Happiest Days Of Our Lives" (from "The Wall")
3. "Another Brick In The Wall, Part 2" (from "The Wall")
4. "Mother" (from "The Wall")
5. "Get Your Filthy Hands Off My Desert" (from "The Final Cut")
6. "Southampton Dock" (from "The Final Cut")
7. "Pigs On The Wing, Part 1" (from "Animals")
8. "Dogs" (from "Animals")
9. "Welcome To The Machine" (from "Wish You Were Here")
10. "Wish You Were Here" (from "Wish You Were Here")
11. "Shine On You Crazy Diamond (Parts 1-8)" (from "Wish You Were Here")
12. "Set The Controls For The Heart Of The Sun" (from "Saucerful Of Secrets")
13. "Breath (In The Air)" (from "Dark Side Of The Moon")
14. "Time" (from "Dark Side Of The Moon")
15. "Money" (from "Dark Side Of The Moon")
16. "Pros and Cons of Hitch Hiking Part 11 (aka 5:06 a.m. - Every Stranger's Eyes)" (from "The Pros and Cons of Hitch Hiking")
17. "Perfect Sense (Parts I and II)" (from "Amused To Death")
18. "The Bravery Of Being Out Of Range" (from "Amused To Death")
19. "It's A Miracle" (from "Amused To Death")
20. "Amused To Death" (from "Amused To Death")
21. "Brain Damage" (from "Dark Side Of The Moon")
22. "Eclipse" (from "Dark Side Of The Moon")
23. "Comfortably Numb" (from "The Wall")
24. "Each Small Candle" (new song)

The first verse of "Each Small Candle" was written by a South American who'd been a victim of torture. An Italian journalist, active in the initiative against torture in Northern Italy, had given Waters the short poem years ago. The poem lay in a drawer in Waters' studio until, during the crisis in Kosovo, he read a piece in The London Times describing a Serbian soldier who saw an Albanian woman lying in a burned-out building. The soldier left his platoon to give aid to the woman, then rejoined his men and marched off. The image inspired Waters to set the short poem, "Each Small Candle," to music and pen additional lyrics. It is the song that closes In The Flesh.

Roger Waters co-founded Pink Floyd with Syd Barrett in 1966. When Barrett left the group, Roger went on to create such classics as

"Dark Side Of The Moon" (which spent nearly 15 years on the Billboard 200 album chart), "The Wall" (which has been certified 23x RIAA platinum), "Animals," "Wish You Were Here," and "The Final Cut." Following the release of "The Final Cut," Roger Waters left Pink Floyd.

His first solo album, "The Pros and Cons of Hitchhiking," was released in April 1984, to great critical and popular acclaim, generating his first solo tour. June 1987's "Radio K.A.O.S." continued the path of solo success, bringing Roger back to the stage. His last solo album, the darkly ironic "Amused To Death"--considered by many fans and critics alike to be an achievement comparable to "Dark Side Of The Moon" or "The Wall"--was released in August 1992.

Waters has been working on "Ca Ira" (pronounced "sa-ira"), an opera in English and French.

Source record: 17442

In addition to "dial rounding", I'd like to hear of any stations that still engage in the archaic practice of promoting their FM Stereo. 104.9 WRDR in Egg Harbor City, NJ used to ID as "Stereo 105" until they were sold a few years ago and changed formats. I've seen a bumper sticker for Princeton University's station saying "WPRB 103.3 FM Stereo", but I don't know how old it was.

And is it true that the "WGAY 99.5 STEREO" sign is still on the building in Washington DC that formerly contained 99.5 WGAY-FM's studios? Of course the station is now a Jammin' Oldies format with different call letters, although to "preserve" the "historic" WGAY call letters, they have been moved to 1260 AM, formerly WWDC. (To those unfamiliar with the station, the WGAY call letters are indeed at least 30 years old, and have never had anything to do with the station's programming or target audience demographic.)

I'll say this much: the music format is pretty tame, a tad "newer" then the
Classic Rock Z-93. Can't hurt much, but nothing new.
The serious bummer is the AM 640 signal that still carries the talk
format is woefully under powered for out side Atlanta's perimeter. I only
live about 20 mile from downtown and I lose the signa lwhen my car
accelrates- which is too bad, the morning and afternoon drive shows are
pretty entertaining. They also have to lower power at night, I think.

4191. Which way does circular polarization go on FM transmit antennas?

Newsgroup: rec.radio.broadcasting
Date: 2000-09-22 00:00:00 UTC
From: Robert Casey <wa2ise@ix.netcom.com>
Message-ID: <39CC2202.FC815863@ix.netcom.com>
Source record: 17447

I understand (?) that many FM stations transmit a horizontal polarized and at
the same time a vertical polarized wave as well. This creates circular polarization.
If I were to build a circular polarized receiving antenna, which way does the
circle turn, ie, is it left hand circular polarization or right handed. Right hand
polarization spirals like the threads on an ordinary machine screw.

Is there a standard in the industry? Or do some stations do it one way, and
others the opposite way?

Ah, I see. The money spent by the makers of Viagra, Depends, etc., isn't
the _same_ or not as _real_ as the money spent by advertisers appealing to a
younger demo. I didn't know that before you posted. Thanks.

Oh, almost forgot: Pull the plug on WOI? Do you have any idea of how much
money WOR makes??? I didn't think so. The answer: Lots and lots.

As with dimmers and touch lamps and toothbrush chargers, offer to buy the station from the owner and silence it yourself.

Alternatively, get a well shielded receiver. The Drake R8B seems pretty tight to me.

Media Network indeed is and has been a top quality media program, and
it's sad to see such a terrific program disappear !!
The english service of Radio Netherlands (contrary to the Dutch service
which is boring, oldfashioned,and imho could at best be replaced
by a direct relay of the Dutch public newschannel Radio 1) is excellent
overall. Top quality radio !!
But what I'm still wondering about is why this small country like the
Netherlands needs to broadcast international current affairs and features
to other parts of the world ?? The Peruvian political crisis around
President Fujimori has been covered by Radio Netherlands in an
excellent way, and was beamed on shortwave to all Continents , so that for
example listeners with a certain command of the english
language in Tadjikistan could, through Radio Netherlands, hear constant
updates about the political crisis in Peru !
Personally (and being Dutch and thus one of the taxpayers Radio Netherlands
is depending on) , I'd like to see the number of
english and Dutch broadcasts reduced and specially would like the english
service spend more airtime on Dutch related issues than it does now.
In addition to that, it would be wise to start Turkish, Moroccan, etc
programmes, focused towards countries where many of the
Dutch immigrants come from. Hundreds of thousands of people in these
countries assume that the Netherlands must be "the land of milk and
honey" , which it for a lot of people maybe is, but not if you happen to be
an illegal alien in this country (The Netherlands is among the most
popular destinations for illegal aliens from certain countries). And
since there are many ethnic minorities living in this country and we'll
have to live with them anyway, such services could establish stronger ties
between the several countries where these people come from
(since there are also tens of thousands of people from these countries
coming over for visits, business, etc.) . As far as english broadcasting
concerns, a good alternative would be a merger of the english services of
Radio Netherlands, Radio Sweden, Deutsche Welle and other international
public or governmental broadcasters, maintain the current level of
programming and create a European Union alternative for VOA. Anyway, I'm
happy with the quality of the Radio Netherlands programming in english
(since they're doing this anyway), but don't see a point in why Radio
Netherlands does what it does.

Other than buying the station and having it go silent (only to have its 50Kw license go up for auction again) , or moving (I too am a ham and SWL; thus, when we were buying a house in 1977, we did not buy the nice house right near the power lines), or installing some pretty good high pass filtering around your house, you are out of luck.

You have to keep in mind - why are there 50kw AM stations? To serve widespread areas, especially if they are licensed to operate at that power at night, which WQEW is.

50Kw stations generate RF. If you move to a house that is in the shadow of the transmitter, everything from your telephone to your refrigerator is going to pick up the RF. I once worked for a company that was just a few hundred yards east of the WRKO transmitter - 50Kw, directional in our direction. We had some advantages - it was the only station we could receive in the computer room because its signal was so strong it overcame the RF that the huge mainframe machines generated. We also had a free extra add-on to our phone system; when people called in and were put on hold, they heard WRKO radio while they waited.

But as a amateur radio operator - you shoulda known and investigated this stuff before you bought the house.

> night? Or, is it simply up to the FCC's discretion to renew the license?

Yes, they are _required_ to run 50 kW if they are a Class A station.
WQEW is somewhat directional at night in order to protect other stations
on the frequency, thus you may be getting more than 50 kW ERP. But
that's the way AM is.

Many years ago (before solid state consumer equipment) I used to live
across the field from WYOP, also a 50 kW station, and directional toward
me. I never had any problems with them. I could get loudspeaker volume
from a crystal set. There are big houses much closer to WTOP these
days. A cousin lives in one of them. They haven't mentioned
interference problems to me.

My ancient copy of the FCC AM broadcast rules says: "Blanketing
Interference. The licensee of each braodcast station is required to
satisfy all reasonable complaints of blanketing interference within the
1 v/m contour." I don't know if this rule still exists. The
manufacturers of your offending equipment ought to be contacted, since
the problem is largely due to them economizing on filtering. Any
equipment with a "CE" mark ought to have less trouble, because of the
European rules for interference rejection by consumer equipment. The US
doesn't have any such requirements. As a US consumer, you're largely on
your own. European AM stations often run 250 or 500 kW, or more.

The nighttime field of WQEW is about 4 V/m at about a half-mile to the
northeast of the station. That would put the 1 V/m contour at about a
mile from the station given the poor urban ground conductivity. Very
rough numbers.

I'm sure that WQEW is listed in the Manhatten phone directory - WQXR
should have the same chief engineer.

4199. Re: Getting a station's power downrated? (WQEW,1560)

Newsgroup: rec.radio.broadcasting
Date: 2000-09-23 00:00:00 UTC
From: SidS1045@aol.com
Message-ID: <40.1318df6.26fe2b70@aol.com>
Source record: 17357

>>I live near to the transmitter site in Maspeth, Queens. I am also a hamradio operator as well as an avid shortwave listener (when i can get a station). QEW's signal is so strong that it not only overloads the front end of almost all radios I own, it leaks into the IF stages. Also, it leaks into almost everything electronic with an audio amplifier unless i take extreme measures to shield and/or ground the equipment and
all connections.<<

The most likely explanation is that your equipment is not designed to work within high RF fields...and before you get defensive, nearly all radios are built that way, whether they're expensive or not.

AM stations are required to measure spurious and harmonic radiation once per year (at a maximum interval of 14 months), and do whatever is necessary to fix any out-of-band emissions. However, given the design of broadcast transmitters, you basically have to TRY to get them to emit out-of-band signals.

>>Are there any regulations under the auspices of keeping a "clear channel" that require these 50kW behemoths to be at that power day AND night? Or, is it simply up to the FCC's discretion to renew the license?<<

As has already been pointed out, Class A stations must transmit at 50 kW, per FCC rules and the terms of their station license. They are certainly not going to reduce power for one person's interference problems, nor is the FCC going to require them to. The FCC deals with this stuff all the time, and as long as the station is emitting a proper signal, there is nothing they will do for you.

>>People that suggest power line/telephone filters need not apply, this is a problem on a wholly different magnitude.<<

There are power line and telephone line filters that do a really good job, even in extremely high RF environments.

>>ps. I dont even know how to get in contact with WQEW or their engineering department, might anyone have a contact telephone or address for this station directly?<<

WQEW is owned by The New York Times Electronic Media Company. Call The Times and ask for Herb Squire. IIRC, he's the chief engineer, and I'm sure he'll be able to help you out.

As a matter of FCC regulations, AM stations are required to "satisfy all reasonable complaints of blanketing interference within the 1 V/m contour." (47 CFR § 73.88) However, this is limited to new stations beginning program tests, replacing their antenna systems, or modifying their facilites under a

construction permit, for a one-year period following such changes. Further, these requirements "specifically do not include interference complaints resulting from malfunctioning or mistuned receivers, improperly installed antenna systems, or the use of high-gain antennas or antenna booster amplifiers. Mobile receivers and non-RF devices such as tape recorders or hi-fi amplifiers (phonographs) are also excluded." (47 CFR § 73.318[b], incorporated by reference into § 73.88)

Now, having said that: Most stations, whether or not your interference must be solved according to the rules, will be willing to help you out anyhow, as a PR gesture. I'm sure your problem is not the only one near the WQEW site, nor will it be the last one, and I would bet that Herb or one of his staff has seen your type of problem before and will be willing to give you a hand.

Source record: 17358

>>I understand (?) that many FM stations transmit a horizontal polarized and at the same time a vertical polarized wave as well. This creates circular polarization.<<

Ah, er, not quite. C-pol is created by an antenna specifically designed to emit C-pol. Same with H-pol or V-pol. Combining H-pol and V-pol doesn't equal C-pol. However, most US FM stations use C-pol.

>>If I were to build a circular polarized receiving antenna, which way does the circle turn, ie, is it left hand circular polarization or right handed.<<

AFAIK, there is no standard. The FCC rules say that "clockwise or counterclockwise rotation may be used." (47 CFR § 73.316[a])

>>Is there a standard in the industry? Or do some stations do it one way, and others the opposite way?<<

To find that out, you'd have to ask the antenna manufacturers. I've been involved in a few FM antenna replacements, and I don't think it even occurred to anyone to ask whether the C-pol emission was CW or CCW. To the receiving antenna, the rotation is irrelevant.

In today's radio world, I disagree. The purpose of having high power is to penetrate dense urban areas and overcome high interference levels from dimmers, ignition, aquarium heaters, dirty insulators and the like. There is little real interest in outside the market coverage; it is not generally a revenue producer.

Two anecdotes: First, KFI in Los Angeles shows up in a variety of Arbitrons besides the LA one. It shows significantly in Oxnard, San Diego, Riverside and Santa Barbara. However, its billings (and rate card) are commensurate with the showing it makes in the LA book alone. It probably gets little or no extra revenue from covering and having numbers in these fringe markets that are not part of the LA metro. Then, WADO in New York. Recently, this station on 1280 raised day power to 50 kw from 5 kw. Why? to get farther out on Long Island? Nope. To get into apartment buildings in Brooklyn and the Queens.

One of the main reasons that stations like KFI can't sell outside their metro is that LA stations have rates in the hundreds of dollars (even in the thousands on the top ones), but the fringe markets have rates well below $100 on the average. For example, KSCA, #1 in LA, can get well over $1 thousand a spot in AMD. If they sent salespeople to San Bernardino (which they don't) they might get $75 from a local advertiser. The advertiser in San Berdoo does not care about the LA audience, and will only pay for the local market listeners at local rates. National advertisers tend to buy on a market by market basis and look at fringe coverage as a bonus, but don't pay for it and don't plan for it.

I have not run into a broadcaster in the last few decades who cares about getting a signal outside the Arbitron Metro they are sitting in. There is no revenue in it unless you are doing an all-night trucking show, and then the revenue is minimal anyway.

>>

Naaa. Been debated here before, ad nauseum. The "race card" always gets played,
thereby making clouding the issues.

WLIB isn't a bad station, it's owned by a bad, opportunistic operator, ICB.

A solution which did not involve a WOWO degrade from Class I-B (Class A) and
50,000 watts to Class II-B (Class B) and 9,800 watts was available, but ICB
apparently didn't want take advantage of that option.

WOWO has been shat upon twice, first by ICB (the aformentioned ad-nauseum
debate) and second, by Salem, which is currently paying to have WOWO further
directionalized, to eliminate any radiation towards Atlanta.

This further degrade will raise WOWO above the 10,000 watt minimum for a
"grandfathered" Class A, but I'm afraid WOWO is forever going to be a Class B
because of other considerations.

> and
> others the opposite way?

It's not exactly like "a vertical component and a horizontal component"... The vertical component actually lags the horizontal component by 90 degrees. The electrical effect of this is as though you have a half-wave, singularly polarized, dipole and physically spin it so that it rotates at a speed which results in one revolution for each "cycle", or 360 degrees, of signal.
Now, we all know that this would result in a physically impossibility because (for instance) a station on a "mid-band" frequency of 99.9 mHz. would have to "spin" their antenna at a speed of 9,900,000 times per second! Therefore, there are some better "electrically equivalent" methods of achieving this.
The generally accepted standard seems to be "right-hand" circular. In all honesty, I've never had a reason to look into whether or not "left-hand" is allowed as this would require an "un-standard" antenna.. In other words, I believe it's a case of an "unspoken rule" or the mythical "marketplace decision".
We're about to launch into a complete series of articles concerning the design and construction of FM transmission systems in order to (hopefully) educate some of the LPFM applicants. You're most welcome to drop in and look over anything and everything on the sight. There's a very small amount of FM antenna information available now but, we'll definitely be adding LOTS more as time goes by.
The address is http://www.MonsterFM.com. It doesn't look like much, to begin with but, as the web master, I can honestly say that you can easily get lost in all of the material after you really begin to dig. If there's not enough information on our site, there are almost 2,500 links to other broadcast related sites, which I'm in the middle of attempting to update so, if you notice any that are "dead", PLEASE send me an e-mail...

Take care,

The whole thread was about an AM station. Some things sould be obvious.

FM stations, as a rule, do not leave thier metros. And if they do, the
coverage of adjacent metros is limited.

Again, we were discussing 50 kw AM stations.

FMs don't have predictable skywave.

Ok, again: Read the header. We are talking about AM stations. FM's don't get
far enough out of their own metros as a rule to make this discussion totally
relevant. And, now that you bring it up, the fact that FMs have such
restricted coverage (restricted by line of sight), everything possible has
to be done to protect any infringement or we will have the AM band all over
again... as 80-90 already proved in many parts of the country.

>>
As has already been pointed out, Class A stations must transmit at 50 kW
>>

Not true.

10 kW is permissible, for "grandfathered" stations.

There is only one such station in the U.S., Bakersfield, CA's 1560.

There are several others in Canada (1550 and, formerly, 1580) and Mexico (1190 and 1550, and perhaps one or two others).

And there was one in the Bahamas (1540).

Additionally, Class As require a minimum antenna efficiency, 225 mV/m/kW at 1 mile.

Yet there are a few Class As which cannot meet that minimum.

Most of the Class I-Ns (which are presently assigned only to Alaska, and are indeed Class As) cannot even meet the minimum efficiency for a Class B, 175 mV/m/kW at 1 mile.

Most U.S. Class I-As far exceed the above-mentioned minimum.

225 mV/m/kW at 1 mile is 362.10 mV/m/kW at 1 km, and most U.S. Class I-As are closer to 400 mV/m/kW at 1 km and a few are over 410 mV/m/kW at 1 km.

This performance requires almost a 200 degree radiator, and it is no accident that more U.S. Class I-As operate with about a 195 degree radiator than any other height.

Peter.

When the heading is really "Getting a station's power downrated?
(WQEW,1560)" it seems like an AM subject to me.

I understand that you are trying to get your agenda into the discussion. Why
don't you simply start a new thread?

>
> >FMs don't have predictable skywave.
> >
>
> You're telling me that KFI and KSCA cover all of the markets you've
> mentioned 24 hours a day by *skywave*? Or, have you changed your
> argument, again?

I illustrate the adjacent market question with examples from one of the most
tightlly surrounded metros in the US, LA. However, the point remains that
the discussion began as an AM issue regarding blanketing interference form
an AM station and my point was that most stations value power in-market
rather than out of market. The subject was not "interference form other
stations" which is a different subject.

The poster wondered why WQEW needed 50 kw and several of us contributed the
thought that they need the power to get adequate local coverage. WQEW is
directional East, and it's site is East of the Metro. WQEW is on 1560,
something I would not wish on anyone. WQEW is on Long Island, and Long
Island may have the worst ground conductivity in the US. All AM issues
relevant to the reasons why WQEW needs 50 kw to even cover part of the
metro.
>
> >(rest of unfocused diatribe clipped.)
>
> Not very "unfocused" at all. It just disagrees with the way you WANT
> the world to operate.

Nope. Not an FM subject. Which does not mean we can't clarify "market"issues
by using examples form other bands or even other media. Here goes another:

Except for USA Today, the NY Times and maybe the Washington Post, name another newspaper that cares about circulation outside its defined market? The paper in Tallahassee could load tons of copies on planes every morning and distribute the rag in Montana. However, the advertisers would not care. But tell the Democrat that they have to remove some vending boxes to accommodate the alternative weekly inside Leon County, and they will scream all the way to the state senate.

Please go back to the original message. Some guy was pissed that he lived in the blanketing field of WQEW. (Having driven through that area, WQEW is the least of his problems).

You are taking this into the areas where your pet ox wants to graze. Run for cover, as your ox is being gored. AM is a prime example of how all but a few stations have been so encroached upon as to make any effort at serving rural areas or large pieces of geography futile. The clears were broken down. Night coverage calculations were played with on occasion. The result is a band that is so laden with interference of all kinds as to be relegated to serving niche markets by all but that same bunch of exceptional licenses. One of the reasons for the NRSC curve (which effectively limited any hope at AM fidelity) was the congestion on AM and the need to restrict bandwidth... see the point?

Let's not take another step at ruining FM. Especially just so that another batch of cloned religious stations can take to the air.

It is taken as one, and appreciated. I also understand where your focus is,
and try to understand.

Probably our main point of disagreement is not technical but philosophical.
I simply think that little LPFMs will do little for programming diversity.
The sort of diversity that is needed, particularly service to minorities and
specialized music and talk subject matter, will be best served by some form
of internet broadcasting. To further endanger the technical balance of the
AM and FM bands with flea power stations is not the way to go. My opinion.
thanks for respecting it.

Even I have mixed feelings about the companies with several hundred
stations. I had hoped to borrow my way into ownership in a smaller market.
But the feeding frenzy and high station prices brought on by deregulation
have made that impossible as I can't pay for a station with stock and
promises of future cash flow. On the other hand, I have a real retirement
plan and good insurance and other benefits that were seldom heard of before.

I don't know the U-Haul rates by heart anymore, either. There are trade offs, and it is easy to see what I can't have rather than what I do have.

Thanks again for showing a side of yourself I did not know. I'm humbled.

You'd be interested to hear that Bonneville's WTOP 1500 50 kW Class A (I-B) will be duplicated on Bonneville's WXTR 820 Frederick, MD, starting in December. WTOP has a deep null toward the NW (KSTP) and they don't cover much beyond where you can see the tower lights in that direction at night. WXTR's big 430 W at night does fair to middling in this null area, even though it must be 30+ miles from 'TOP. The delay in the switch in 820 programing is to allow CBS to give WFMD 930 Frederick 90 day notice of being dropped. WFMD has been with CBS since at least the early 1940s.

Bonneville came into ownership of WXTR when they bought its co-owned 103.9 Class A in hopes of improving Class B rim-shot 104.1 which is way on the other side of DC. They have been programing country on 820, but the big-coverage grandfathered FMs in the Frederick area are country with BIG ratings. Thus there was synergy to dump country and try filling WTOP's coverage gap. Loads of people commute from the Frederick area to the DC area.

So WTOP will be a trimulcast: 1500 50 kW, 107.7 Class B rimshot* well down in VA, and now 820 Frederick 4.3 kW day, 430 W night.

*107.9 Annapolis eats into 107.7's coverage in the eastern part of the DC area, and there is a 107.9 in PA that hurts around Frederick.

Yes. I just pulled the map. I guess I could have been more precise, but the main point is that the station is East of Manhattan and the Joisey suburbs, and needs every watt of the backside of the pattern to cover the metro. Suggesting that they drop power given the conductivity at the site is not a really good option. Trying to listen to 1560 in the Meadowlands is nearly impossible.

> To Which David Eduardo replied:
>Interesting comment. How about detailing the reasons why you think WLIB is
a
>bad station? Might be an interesting topic.

To which I reply:
I didn't say that I thought WLIB was a bad station. I don't know much about them or their programming. I believe they have ethnic programming of some kind but I can't say for sure.
What I do know is that they purchased WOWO, Indiana's only Class A Clear and crippled it's nighttime coverage (I live about 70 miles from their TX site and can no logger receive them at all). This was done to improve the nighttime coverage of WLIB. I may be wrong, but it doesn't look like WLIB is doing any better in the Arbitrons then they did with their previous nighttime contour, but WOWO will never be a Class A again.
As for making an interesting topic, I believe the de-rating of WOWO has been the single-most discussed topic in the 5 years I've been reading this Newsgroup.
It's a dead horse. Not much left to discuss. I really miss WOWO, but my post was basically a feeble attempt at humor.

Maybe if they get thousands of requests they might reverse the decision -
lets hope so. First Media Network is to close on radio. Who knows perhaps
next Radio Netherlands does the same & becomes internet only??

Its time for radio enthusiasts (a quiet lot usually) to make some noise!!

Please send an email media@rnw.nl

From the hcdx home page::

They have never received more response than now.
It has never been more popular.
Listening is at its peak.
Let's close the show.
So goes the reasoning of Radio Netherlands' program director Jonathan Marks.
After an almost 20 year run, he has decided to scrap his own DX stellar
program, the Media Network.
"It has been enormous fun", says Jonathan "but this seems a good point to
hang up the headphones and step back from the microphone."
The Media Network has become too specialized, too freakish.
Short wave listening obviously no longer is the thing for the Dutch short
wave service. Instead Media Network has to make it on the Internet.
"Media Network will be back in the pioneering phase again", notes Marks.
Media Networks final edition as a radio show is aired on October 26. (Hermod
Pedersen, hcdx news desk, September 21, 2000)

4222. Getting a station's power downrated? (WQEW,1560)

Newsgroup: rec.radio.broadcasting
Date: 2000-09-23 00:00:00 UTC
From: Daniel Abranko <daniel-abranko@usa.net>
Message-ID: <daniel-abranko-9EB934.01525521092000@news.earthlink.net>
Source record: 17450

Hi, I was wondering if there was any way, or specific steps that need to be taken, to get a radio station to have a high power 50kW day/night license backed down to a much lower power at night?
The station I'm wondering about is 1560 WQEW in NYC. The station has switched to satellite fed radio disney in the not so recent past and I think their coverage with this station overlaps some other markets where they have stations playing the same thing.
My beef is not really with the programming (well it does suck and has caused the total elimination of QEW from the NY Arbitrons but i digress,) of the station, but with its EXTREMELY high night power. I live near to the transmitter site in Maspeth, Queens. I am also a hamradio operator as well as an avid shortwave listener (when i can get a station). QEW's signal is so strong that it not only overloads the front end of almost all radios I own, it leaks into the IF stages. Also, it leaks into almost everything electronic with an audio amplifier unless i take extreme measures to shield and/or ground the equipment and all connections.
Are there any regulations under the auspices of keeping a "clear channel" that require these 50kW behemoths to be at that power day AND night? Or, is it simply up to the FCC's discretion to renew the license? People that suggest power line/telephone filters need not apply, this is a problem on a wholly different magnitude.

ps. I dont even know how to get in contact with WQEW or their engineering department, might anyone have a contact telephone or address for this station directly?

Thanks much,

Daniel Abranko

> choices, they will go for the sleaze every time.

It operates at many levels. I'd love to reread War and Peace or Walt
Whitman. But what do I take on the plane with me tomorrow? Tom Clancy and
"The Bear and the Dragon." In the setting of my particular life, it is less
tedious and more entertaining. 18-24 males may well have a "flip the bird to
the world" attitude, but they are not going toseek radio programs that
reflect some hiher ground.

This gets into the area of whether radio creates taste or reflects it.
Perhaps there is a little of both, but most radio I hear is reflective
rather than a catalyst.
>

There is a legitimate goal of radio to entertain. You know, people in the
50's were saying, "How can Ed Sullivan be allowed to put Elvis Presley on
the air" and innundating thelocal affiliates with letters about community
responsability. Every time I see one of these comments about "filthy radio"
or "filthy songs" it seems to come from someone who is a generation behind
yet who sees nothing wrong with the music, dress and attitudes of their
youth.
>

>

Good point. When markets had relatively few stations, and fewer ones with a
decent signal, it seemed that the same Top 40 songs were on most of them in
a time when Tip 40 meant playing only 40 songs over and over. The more

things change...

Northeast

WEXI (102.9fm, Huntington) ends its simulcast with sister Rock/WXKE (103.9fm, Fort Wayne) and flips to "alternative dance" as "Energy 102.9" IRW listened for about two hours yesterday and was quite impressed. We heard a mix of early 1990's and current dance tracks, mixed back-to-back with no jocks and very few liners. Special note for PD Dawn Sweet: IRW didn't hear a Legal ID in that two hour span.

Speaking of WXKE, longtime air personality Sharon Rossi exits.

Dean McNeil is the new co-host of SportsTalk on News-Talk/WOWO (1190am, Fort Wayne). McNeil replaces Art Saltsburg, who remains with Federated Media, as mentioned in our 29 July issue. McNeil hosts the show with Dean Pantazi, Sports Director at Granite Broadcasting's WPTA-TV (Channel 21, Fort Wayne [ABC]). Also, the show is shortened by one hour; it's now on from 6pm - 7pm. By the way, McNeil is no stranger to Maples Road; he's the Operations Manager for Country/WQHK (105.1fm, Decatur). With their shortened show, the Dolans move to 7pm - 9pm, and all 4 hours of the Michael Reagan show are on from 9pm - 1am.

Returning to the Fort Wayne airwaves is the morning duo of Dirk Rowley and Jeannette Rinard, this time at Sarkes Tarzian's AC/WAJI (95.1fm, Fort Wayne). Rowley and Rinard did mornings in the 1990's at Country/WBTU (93.3fm, Kendallville). Rowley returns to the Summit City from Country/WBYT (100.7fm, Elkhart) where he did mornings, while Rinard took some time off from radio to be a full-time Mom.

The sale of Country/WBTU (93.3fm, Kendallville) was finalized from 62nd Street Broadcasting to Artistic Media Partners, for $5 million, on 5 September. And with that comes...

J.R. Greeley exits as GM at Country/WBTU (93.3fm, Kendallville) Taking over responsibilities at "B-93" is Shel Leshner, GM at Artistic's properties in South Bend (WHLY, WJVA, WNDV-AM & FM). Leshner's new title is "AMP/Northern Indiana GM" We hear the airstaff's future, including the morning "J-Crew", is uncertain.

Weasel, PD at Urban/WJFX (107.9fm, New Haven) steps down, but will remain with "Hot 107.9" doing mornings.

Religious/WBCL (90.3fm, Fort Wayne) names Jason Craner as News Director. Craner arrives in the Summit City from Lansing, Michigan, where he was News Director & morning host at WLGH.

Newsman Lee Burdorf exits News-Talk/WOWO (1190am, Fort Wayne). Replacing Burdorf is John Perlich, from crosstown Talk/WGL (1250am, Fort Wayne).

Speaking of which...Talk/WGL-AM (1250am, Fort Wayne) picks up The Phil Hendrie show, live from 6pm - 9pm. 2 of the 3 hours were rebroadcast the next morning from 7am - 9am, but owner Frank Kovas has decided to only broadcast the show at night, after only a few weeks of this lineup. A new morning show for WGL is yet to be determined. Also at WGL, Dean Taylor is their new PD, arriving at Lower Huntington Road from Talk/WBOW (640am, Terre Haute).

On the other side of that building on Lower Huntington Road, the shakeup at Rhythmic/WCKZ (102.3fm, Auburn) continues. "Trip" exits one week after morning man Phlash Phelps departed for Washington, D.C. Promotions Director Courtney Heiser (the other 1/3 of the show) is now off-air, concentrating on her Promotions duties. IRW hears that they're actively looking for mornings. For now, VP/Programming Brian Michel is rotating interim morning duties with night guy Mike Thomas.

Northcentral

Jason White is the new news director at Elkhart Community Schools' WVPE (88.1fm, Elkhart). According to _ShopTalk_, White was last at WNDU (Channel 16, South Bend) where he was the 5pm weekday producer.

At CHR/WNDV (92.9fm, South Bend) morning stunt guy Jeremy Grey exits. Also, Production Director Tim Krueger has given their webpage a new look: http://www.u93.com/new

John Fineran exits the "WeekDay SportsBeat" at News-Talk/WSBT (960am, South Bend).

Woody departs mornings at Rock/WAOR (95.3fm, Niles, Michigan).

Northwest

What's going on with WZRK (101.7fm, Kentland)? Our Archive has little in the way of information as to format, etc. While browsing the latest FCC actions, we noticed that they granted a License to Cover for the station. Presumably, this would mean that they're on the air for the first time. However, if you believe the FCC database, it says that WZRK is silent. If you know something, please let us know.

Eastcentral

Some big changes at Brewer Broadcasting's News-Talk/WHON-AM & Country/WQLK-FM (930am, Centerville; 96.1fm, Richmond): PD & WHON morning man Russ Walker exits. Dan Mills is now OM for both WHON & WQLK. New PD for WHON is Troy Derengowski from Rodgers Broadcastings' Talk/WKBV (1490am, Richmond). At WHON, Derengowski will host an hour long morning show, an afternoon/evening sports show, take Sports Director duties, and (!) do sports reporting for both WHON and WQLK. Finally, News Director Bill O'Hara ends his lengthy radio career. Replacing O'Hara as News Director at both stations is Jeff Lane.

Central

CHR/WNOU (93.1fm, Indianapolis) names David Edgar as PD. Edgar arrives from Pittsburgh, Pennsylvania, where he was PD at WBZZ.

The vacant night gig at CHR/WZPL (99.5fm, Greenfield) is filled by Jason Burns (aka Buzz Craven). Burns heads to the Circle City from Florida, where he's worked in Orlando and Tallahassee. Burns' first day is October 2. Also, John Mills is new to overnights at WZPL. Mills was last at Rhythmic/WHHH (96.3fm, Indianapolis), where he did weekends.

WFBQ/WNDE/WRZX promotes Assistant Production Director Tim Denniston to Production Director. Also, Chris Geisen is now Creative Services Director for all three Clear Channel stations.

New to weekends at Oldies/WGLD (104.5fm, Indianapolis) is Don Riley. Riley was last at WASK & WKOA in Lafayette as OM/PD.

Condolences to the family of Richard M. Fairbanks. Fairbanks, 88, died August 11 in Key Largo, Florida. According to the obituary in the _Indianapolis Star_, he is the son of Charles W. Fairbanks, Vice President under Theodore Roosevelt. Richard Fairbanks founded Fairbanks Communications in 1948 to buy WIBC (1070am, Indianapolis). The Fairbanks family also owned the Indianapolis News (later sold to Eugene C. Pulliam also in 1948.)

Addendum: In our 25 March issue, we told you that a historical broadcasting landmark has disappeared in Anderson: The WHBU-AM Blaw-Knox tower. WHBU Chief Engineer has put some photos of the WHBU tower on this website:

http://ultimategto.com/whbu1240.htm

Westcentral

Where are they now: Former CHR/WMGI (100.7fm, Terre Haute) PD Beau Richards is now the new PD at KHFI in Austin, Texas.

Southeast

Elizabeth Hamma is the new GM at the Cox properties in Louisville, Kentucky (WMHX, WRKA, WSFR, and WVEZ). Hamma arrives from GSM duties at WDFN-AM & WWWW-FM in Detroit, Michigan.

Doug James, GSM at Clear Channel/Louisville (WAMZ, WQMF, WTFX, WYBL, and WZTR), heads across town for similar duties at the Blue Chip properties (WBLO, WDJX, WFIA, WGZB, WLRS, WMJM, and WULV)

Oldies/WINN (106.1fm, North Vernon) PD Kris Kaane exits for MD & Nights at WOMP-FM in Wheeling, West Virginia.

After dropping Bob & Tom, Classic Rock/WSFR (107.7fm, Corydon) adds syndicated morning duo Lex & Terry, from WFYV in Jacksonville, Florida.

Also in the Louisville metro, Country/WYBL (93.1fm, Clarksville) adds syndicated morning duo "John Boy & Billy" from WRFX in Charlotte, North

Carolina.

Family Worship Center Church gains approval on their revised application for 91.1fm in Madison. Calls are now W216BU-CP. The FCC dismissed their original request back in June.

Where are they now? Former Cox/Louisville, Kentucky VP/GM Brent Millar is now VP/Market Manager at Entercom's Greensboro, North Carolina stations.

Southcentral

AAA/WTTS (92.3fm, Bloomington) welcomes Jim Ziegler as PD. Ziegler was last doing nights at legendary AAA/KFOG in San Francisco, California. Also, MD Marie McCallister is promoted to Assistant Program Director.

A call letter swap between two Good Shepherd stations: The 96.9fm in Hardinsburg flips from WBRO to WKLO, while the 89.9fm in Marengo flips from WKLO to WBRO.

Southwest

Lots of changes at CHR/WSTO (96.1fm, Owensboro, Kentucky): PD/midday guy Dr. Dave Michaels shifts to mornings, alongside Diane Douglas. Douglas is new to "The New Mix 96", arriving from Oldies/WRIT (nee WZTR) in Milwaukee, Wisconsin. Michaels moves since morning man Chris Kellogg heads to mornings at WCBZ/WRHT in Greenville, North Carolina. Also, night guy Cat Michaels is upped to MD, while webhead Scott Michaels has to find his headphones, since he's coming back to WSTO for middays.

Family Worship Center Church gains approval on an application for 89.5fm in Loogootee. Calls are W208AZ-CP.

That's it for this issue. See you in two weeks!

>>
Yes. I just pulled the map. I guess I could have been more precise, but the main point is that the station is East of Manhattan and the Joisey suburbs, and needs every watt of the backside of the pattern to cover the metro. Suggesting that they drop power given the conductivity at the site is not a really good option. Trying to listen to 1560 in the Meadowlands is nearly impossible.
>>

Metro Class Is (Class As) should be allowed to operate with greater than 50 kW days, yet retain the same "notified" operations nights.

Mexico already does so.

"Jim Burgan" jim@burgan.net commented ...

>>
I didn't say that I thought WLIB was a bad station. I don't know much about
them or their programming. I believe they have ethnic programming of some kind
but I can't say for sure.
>>

The AM side serves a purpose, but the FM side was always available.

>>
What I do know is that they purchased WOWO, Indiana's only Class A Clear and
crippled it's nighttime coverage (I live about 70 miles from their TX site and
can no logger receive them at all). This was done to improve the nighttime
coverage of WLIB.
>>

This was done to allow WLIB to become a Class B station.

But Indiana's only Class A should have been allocated to Indianapolis, not to
Ft. Wayne, in the first place.

In which case it never could or would have been broken down by ICB to allow
WLIB's change to Class B, and, in fact, it might never have been broken down to
allow KEX to change from specified hours on 1180 to full-time on 1190.

>>
... but WOWO will never be a Class A again.
>>

True, unless someone wants to buy WLIB, and the 1190s in Atlanta and Kansas
City and take them dark.

>>
As for making an interesting topic, I believe the de-rating of WOWO has been
the single-most discussed topic in the 5 years I've been reading this
Newsgroup.
>>

Mainly from idiots who wanted to make it a "race card" issue, and ignore the
technical details.

>>
It's a dead horse. Not much left to discuss. I really miss WOWO, but my post
was basically a feeble attempt at humor.
>>

What's left to discuss is the steps that ICB could have taken to retain WOWO as a Class A, while also improving WLIB's own operation, which would have required that ICB negotiate with the Canadians to formally abandon the long silent operation on PEI.

As it is, ICB took a quick, cheap "out", and got a minimally performing Class B in the process.

Yes you have, and it's the very station we're talking about,
in its former incarnation. WQXR-AM was a way to offer a WQXR-FM
fix in the Hamptons and upstate, not a way to contend with NY
Metro interference.

Bernard McGuirk on Imus some time ago characterized WLIB as running
the ``kill whitey'' format. I don't know if this is the official designation.
It's probably K&W or something.

4231. US Radio Networks???

Newsgroup: rec.radio.broadcasting
Date: 2000-09-24 00:00:00 UTC
From: Richard Crowley <rcrowley@xprt.net>
Message-ID: <FDEJILKADBILFMFBBBHHMEBKCBAA.rcrowley@xprt.net>
Source record: 17387

Can anyone here summarize the current state of radio networks in the USA?

Westwood One seems to have bought up Mutual and the radio networks from CBS and NBC. I don't listen to a wide variety of stations here in Portland, Oregon, but the only network news I've heard in many a year is CBS and ABC (sort of).

The CBS product seems to be pretty much the same as it has been all my life. Real news reporters out in a few major cities of the world (with lots more stringers and BBC and CNN(?) reporters where they don't have anybody) Regular newscasts every hour on the hour around the clock and about a dozen features (like Charles Osgood).

What I've heard of ABC is some kind of newscast at :45, apparently generic, unbranded and short (1:00 or 1:30?) And ABC syndicates talk shows like Bob Brinker (the only one I am familiar with), but what else do they do?

I haven't heard anything identified as Mutual or NBC radio in many years. Westwood One still runs things like Jim Bohannon who used to be on Mutual (along with Larry King before he went to TV/CNN) Did Westwood One just kill off Mutual and NBC Radio?

I also asked this on alt.radio.networks Is that NG about commercial radio networks? It appears to be dead.

Richard

Originally - and when the 50kw was assigned - WQXR-AM was the primary station, an attempt to provide a high-fidelity classical music service. The FM came later - and I'm sure that for years, it was simply considered a perk for the few people who had FM radios. It was only well into the stations' history that WQXR-FM became the most important side of the operation.

4233. Crap signal from WQEW (then WQXR NYC)

Newsgroup: rec.radio.broadcasting
Date: 2000-09-24 00:00:00 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <20000924152244.8946.qmail@web119.yahoomail.com>
Source record: 17389

Hello:

I am a semi-retired broadcast engineer in Macon, GA. I
was born and raised in Brooklyn, NY.

As a kid I loved classical music and still do so
listened to WQXR 1560.

I recall the crap signal even with the 50 KW. I lived
in Brooklyn NY at the time. No doubt it had the worst
in-city signal for a 50 KW I have ever seen.

Interestingly, later in life I was to be CE for a 50
KW AM in Montana.

As for the listener thinking the FCC will somehow do
anything because of interference is laughable. It is
simple fundamental overload. If you want to live next
to an airport, you can't complain about the noise. If
you want to live next to a 50 KW AM, don't complain
about the field intensity!

73,
Meyer Gottesman, W6GIV/4
Macon, GA

Thanks for the opportunity to clarify: there was no implication intended that this was the *original* core function of QXR-AM. David and I were talking about the last few decades...he said he hadn't run into a station in that time that cared about getting a signal beyond their own Arbitron metro. There are more exceptions to this generally accurate rule...but QXR-AM may well have been unique, taking David one step further by blowing off the audience in its home precincts and targeting listeners 70 or more miles away. I believe it really was marketted to the effect that "you can still get WQXR, even at your vacation address." We're talking about that part of the station's simulcast era that continued after the near-universality of car FM.

QXR-AM is no more, but last I checked, QXR is on big-dish satellite today. I believe my local cable company in Cooperstown still sends a noisy feed of the satellite on cable FM.

Originally - and when the 50kw was assigned - WQXR AM was the primary station,
an attempt to provide a high-fidelity classical music service.
>>

WQXR was originally an experimental station, back in the days when the BCB went to 1500 (and 1500 was a Class IV frequency back then).

WQXR's immediate predecessor did indeed experiment with "high fidelity" (AM) radio. I cannot remember the experimental call, however.

When the BCB was expanded beyond 1500, the Class IV stations on 1500 were moved to 1490 simultaneously with the clears formerly on 1460 to 1490 being moved to 1500 to 1530.

1540 was added as a Bahama clear, first at 10 kW and now at 50 kW.

1550 was added as shared Canadian/Mexican clears, both stations being "grandfathered" at 10 kW.

1560 was added for WQXR's now permanent, non-experimental operation, and was later expanded to include a new clear in Bakersfield, California (this being "grandfathered" at 10 kW).

1570 was added as a Mexican clear, "notified" at 250 kW, but this has been operating at 10 kW for about a decade.

1580 was added as a Canadian clear, first at 10 kW and later at 50 kW, but now silent.

IIRC, this was done to ADD nighttime service. Previously, they were daytime only.
>>

I believe WLIB was not a daytimer but was grandfathered as a limited-time station, 10 kW DA-2, L-WOWO.

IOW, WLIB was permitted to operate with its night facilities whenever WOWO was not also operating nights, which was obviously only during certain nights of the week.

Which is at the root of the problem, as taking WOWO dark (or simply reducing it in class to Class B, which is what was done) would have the same effect as allowing WLIB to operate with its night facilities during all night hours.

W2XR. (easy to remember because they decided to change it as little as possible when it went from experimental to commercial service!)

There were a few other experimental "high fidelity" stations authorized in 1510-1590 before the band was expanded. Can't remember where to tell you to look for the information though. These stations were operated on 20KHz channels (1510, 1530, 1550, 1570, 1590) rather than 10KHz - 1520/1540/1560/1580/1600 were not valid channels in the experimental era.

That's definitely true, that the AM was only an adjunct in its later
years.

WHB in Kansas City was operated as "Farm Radio" for awhile, (recently)
intentionally targeting the rural audience in surrounding areas rather
than the people of Kansas City itself.

And WQXR was 10 kW until after WW2.

4240. Getting rid of "Hot Talk" format!!

Newsgroup: rec.radio.broadcasting
Date: 2000-09-24 00:00:00 UTC
From: davesproul@aol.com
Message-ID: <20000924163311.18924.00000383@ng-cb1.aol.com>
Source record: 17396

Here's just one lonely voice trying to appeal for shrewd suggestions for getting rid of the "Hot Talk" trend in radio programming. I just get so furious when I hear the lame, boorish, mean-spirited, un-creative stuff that seems to be the norm on these stations.

Recent posts were in disbelief at how far down Mancow will stoop. Here in the Washington, DC area the disease is known as Elliot on DC101. The station and show only survive by appealing to the rebellious, bird-flipping instincts of young male listeners. (I already exercise my right to avoid tuning in.) But by cultivating these instincts when there are SO many other things that need to be cultivated in young minds, the station is taking a direct role in the destruction of the community it serves. It's a disgusting show of irresponsibility.

The DC area already had Don and Mike and Stern. These guys often go too far and are pathetic role models for young men (especially Don - don't get me going!) But Elliot's brand is SO lacking in couth that I just HAVE to do something.

I know it's naive to think the FCC can ever substitute for community concern and action. Isn't there something I can do short of obsessively targeting show sponsors and burning up my own valuable free time? Isn't there a GM with a conscience who can be reminded to just say "no" on principle and a sense of debt to the community?

Do what you're doing. And if you receive a radio diary, be honest. Do
not be afraid to say that you don't listen to the gutter-mouths.

Believe it or not, there IS some quality programming left on radio - you
just have to spin the dial to find it.

The problem is, those young minds have already figured out that the
dials on their radios can be changed, just as yours has. Given
choices, they will go for the sleaze every time.

>I know it's naive to think the FCC can ever substitute for community concern
>and action. Isn't there something I can do short of obsessively targeting show
>sponsors and burning up my own valuable free time?

Yes. Just turn the offending material off, which you say you have.
If you don't hear it, you don't know it's there, and it can't bother
you, unless you have more deep-seated neuroses and obsess about
controlling the lives of others.

>Isn't there a GM with a
>conscience who can be reminded to just say "no" on principle and a sense of
>debt to the community?

Not as long as advertisers desire to reach that audience, and the GM
has competitors who would jump at it if he turns his back on it.

This is just another consequence of cramming the dial full of
stations. The common denominator is pushed ever lower in a free
market for culture. But there's no law that says you have to listen
to that which offends you. There are lots of other stations on the
dial. In fact, the market is so fragmented now, that I've been able
to totally isolate myself from contemporary pop music. 30 years ago
that would have been impossible if I used radio at all.

In 1970 (30 years ago) here in the DC/Balto area we had at least twice as many classical stations as we have today, and they played selections longer than 10 minutes. We had beautiful music/show tunes station(s). We had full-time jazz, not smooth jazz/rock. We had American Airlines "Music 'Till Dawn". We had far less talk. Yes, we had current pop music, but radio was far more diverse.

We didn't have the 7 Spanish stations, and the Korean, Chinese, and Arabic stations - but we didn't have the population they rightly serve. We didn't have C-Span radio.

Well, that too.

However, stations such as WBZ, WCBS, WOR, etc. also manage to penetrate
a much larger area in daylight than their lower-power counterparts.
They also do a better job (generally) than FM stations do of that.

I do not disagree with you that a 50Kw station has an advantage of
overcoming other man-made interference.

If you say so.... But by the beginning of 1942 the FM was W59NY ("45.9 Mc") owned by the Interstate Broadcasting Company (New York Times) and maintaining a full broadcast schedule. Interstate also owned WQXR(AM). In Jan 1942 W2XQR (43.2 Mc) was owned by John V. L. Hogan. Not knowing better, I'd guess that he got a new experimental license (W2XQR) after he sold WQXR/W2XR/W59NY to the Times. Not even I am old enough to remember first-hand.

In the early-middle 1940s many experimental FM calls had two-letter suffixes. Examples are: W3XL (became WASH) and W3XO (became WINX-FM, then WTOP-FM, now WHUR(FM))

> 20%!

I do know that in many states, including Massachusetts, the deliberate non-payment of wages due is a felony.

This means you don't have to mess around with a silly court system. You go down to the police station, swear out a complaint (you'd better be right, however, of course, you don't play games in this arena, because it's jail time for YOU if you're screwing around), and within hours the police will show up at Mr. Skinflint's door.

Ever see the boss hauled away in handcuffs in front of his whole staff? Or see an offended former employee walk into an office with a police escort demanding his money?

If you live in a state where non-payment of wages is felonious, the mere suggestion that you are thinking of taking police action will almost always work. Also in your favor is that the management of these stations usually is imported from somewhere else by the corporation. While they have a big job with big money, they often have no community connections or 'pull'.

I know that many states have heavy civil penalties for non-payment of wages as well. Here in Massachusetts, if a boss didn't pay what he owes his people, he can wind up paying triple damages, whether or not you have him hauled off to spend time in the tank or not.

I'm not convinced a longer music sweep is a good thing.

It leads to longer commercial sweeps, which means either you enjoy
listening to 5 minutes of commercials in a row, or the station basically
"goes off the air" a couple of times an hour...

Personally, I'd rather they mix the commercials evenly among the music.
The way they do it now, I know when I hear the first commercial, it's
time to change stations or turn the radio off - as it's going to be a
LONG time until I hear more music.

Yes, I do agree on "mixing" the spots up . However as I said ,Z-93 in Atlanta is far above KZPS in Dallas-Ft worth. The announcers sound more involved in their shows as oppsed to DFW. KZPS commercial blocks are "excruciatingly' longer than Z-93's. The music selection on Z-93 is more varied,not the "TOP 40" you hear on KZPS. The contests are even more original,and creative. As I said before KZPS has no competion , so there ratings will be good , but "STAGNATED".

Stop listening. Cause the ratings to dive and you'll see this stuff
disappear in no time. In my market of about 85 signals we have 2 shows
that really qualify under your definition. That means 83 stations do
not program this stuff.

>Recent posts were in disbelief at how far down Mancow will stoop.

How can you doubt how low a show that has a sidekick named Turd will
go. I think this is simple denial.

>The station and
>show only survive by appealing to the rebellious, bird-flipping instincts of

A little reality needs to peek its head through here. Getting young
male listeners to listen to Morning Edition on PBS so they can be
properly enlightened citizens has as much chance of success as
breeding pigs to fly.

>The DC area already had Don and Mike and Stern. These guys often go too far and
>are pathetic role models for young men (especially Don - don't get me going!)

They're not trying to be role models. They're trying to be
entertainers. We use to look at sports figures as role models until we
found they were taking drugs, beating up women and not calling their
mothers.

Whatever happened to parents as role models?

>I know it's naive to think the FCC can ever substitute for community concern
>and action.

What community concern? It seems most of the community is listening to
these shows, judging by the ratings.

>Isn't there something I can do short of obsessively targeting show
>sponsors and burning up my own valuable free time? Isn't there a GM with a

>conscience who can be reminded to just say "no" on principle and a sense of
>debt to the community?

If your time is too valuable to tilt at this windmill, why should
others do it for you?

If I want to increase a show's ratings the best thing I could ever ask
for is a Jerry Falwell/Jimmy Swaggart group of moral protesters
parading in front of a station. It attracts TV cameras and gives me
publicity I couldn't afford to buy.

Since mainstream advertisers already avoid those shows, your attack on
advertisers won't do much good. The advertisers on the shows want to
be there because that's where their target audience will be found.

The best solution is to be a proper parent and teach your kids not to
like this stuff. Of course, that takes valuable time. Time that could
be spent on a golf course.

Rich

It's probably the same conclusion you would have made, anyway. My
conclusion would be: he didn't win. Gettin nominated is easy. Winning
is another matter.

4259. Texas Traffic Reporters Past & Present

Newsgroup: rec.radio.broadcasting
Date: 2000-09-25 00:00:00 UTC
From: Steve Walker <steve@thisdomain.com>
Message-ID: <39CF5DA2.1C62EAA9@thisdomain.com>
Source record: 17270

I am looking for Texas traffic reporters, both past and present, to help with a story. If interested in helping me with some research, please send email with your name, geographical area and call letter history and, of course, your email address. A contact phone number would also be helpful.

If you know someone who might be able to help, please forward this message to them.

Thanks,

Steve Walker

The part about petitioning to increase their power to 50kw from 5kw
is interesting. I wonder how the locals around me on 1270, WILE
and WUCO, would view it. It would make Imus easier to pull in, though.

The copy mentioning using WFAN as a model was hopeful too, as Imus
is a big part of WFAN and seems to do well on sports stations.

i'm not sure if this station is considered quite "hot talk," but if anyone knows of Real Radio 104.1 in Orlando, I personally think it's a great talk station.. they have Stern in the morning, but I enjoy that show too 3-7 PM they tend to "keep a low profile" with the hot talk, but the rest of the day is debatable

Hey Rich - I know it makes life easier for you to be breezy and cynical, but my concern is for the ever-descending level of localized civic responsibility. I don't play golf. I HAVE instilled the right things in my daughters' minds, but I also have a responsibility to try and reduce the quantity of barbarism they face when venturing out into public.

I shudder when I ponder the odds that the guy my teenage daughter has a blind date with tonight spent several hours this morning listening to Elliot humiliate the woman ON HIS OWN BROADCAST TEAM. The guy has no integrity.

Elliot somehow coaxed one of the owners of the Washington Capitals (Ledecky) onto his show. Ledecky thought he had to act like Elliot to fit in and made profoundly stupid remarks about the women in his own life. He's probably ruined several personal relationships trying to get down to Elliot's level. How foolish and destructive of both of them! How pathetic! That's tangible damage.

Someone who posted that the real cause is the number of stations competing has it right. Only people with no integrity can conclude that the only way to be different is to be gross and then jump on in. What a sad waste of human potential. Not funny at all.

I don't listen to the show. My daughters don't listen to the show, but people we must interact with reveal all the signs of this corrosive attitude. What are YOU doing about it?

It's a descending spiral. AM, before NRSC, when heard on a good receiver
(Dymek or any 40's era tube set) had amazing fidelity. Cheaper receivers are
one end of the equation. Trying to fit more AM stations on the dial by
limiting bandwidth is another.

Makes me remember an incident while consulting a station group in Mexico. I went in one morning and found the management in an uproar. Seems the government had dropped the maximum load of commercials from 42 minutes to 38 minutes an hour.

3 five-minute stops seems downright average. Back in the often recalled (on this ng) halcyon days of Top 40 AM stations, the average load was generally the FCC max: 18 minutes an hour.

AM coverage is more dependent on ground conductivity and frequency than power. Power helps overcome high frequency and bad ground conductivity. The original posters problem is a result of the poor design of "modern" consumer gear. I grew up within a mile of two daytimers with 5KW.Had a 200 ft longwire in the trees,and all of my radios were hooked to it one time or another.The vacum tube stuff-going back to 1935 -and the good solid state rigshad no problem.Just wrapping the leadin around a cheap set was a classic case of overload.BTW the RF feild strength when measured with my VTVM was 5+volts.

I think you are being overly romantic if you think "any 40's era tube set"
equals "a good receiver". The response of a typical "40's era tube set"
is such that the NRSC II RF mask will have no effect on the fidelity of
reproduction obtainable. Yes, there was a descending spiral of receiver
fidelity, but if you read the technical literature of the 30's, you will
realize that the decent down the spiral was nearly complete by that time,
well before the post war effort to fit more AM stations on the dial took
effect.

Where is the evidence to suggest that the typical "40's era tube set" had
audio response that would be compromised by effectively limiting the
transmitted audio to 10 kHz at the high end, as the NRSC II RF mask does?
For that matter, does a 10 kHz upper limit really have that much effect on
the effective fidelity, given the effects of loud music, and/or age on
many ears.

A typical "40's era tube set" is not a "Dymek" by any stretch of the
imagination.

Regards,

John Byrns

Limited, but not eliminated. The NRSC RF mask still allows *far* better high-frequency response than most AM receivers will pass.

I just came back from visiting Atlanta. I will say this, Atlanta's classic rocker "Z-93" puts Dallas-Ft worth's Classic rocker KZPS to shame!! At least in Atlanta I hear TRUE CLASSIC ROCK, not Heart,Boston, Dire Straits,Cars 24-7 as you hear on KZPS. Z-93's sweeps are longer, cleaner,and better sounding.

As a follow-up, I went out and looked at the NAB (National Association of Broadcasters) web site, as their radio picnic just ended in San Francisco.

They give out awards called "Marconis", which are similar to Oscars, Emmys, Grammys, etc. I don't know if he won or not, but Stern was one of the nominees for "Network/syndicated personality of the year".

So if he's a nominee for one of their highest awards, well ... make your own conclusions.

Unlike TV, where clockwise (right hand) circular polarization is specified (47 CFR § 73.682[a][14]) to enable the use of CP receiving antennas. This has been in effect since the late 1970s, though I've never heard of anyone making "all-channel" CP TV antennas. (Supposedly some UHF subscription TV operations had cut-to-channel CP antennas to feed their decoders, and it's possible that some cut-to-channel antennas may also have been offered for cable or MATV headend installations.)

Elliot is lame but otherwise benign (in other words, he doesn't amount
ot much and won't cause much damage). Doofus and Mike (Don & Mike at
WJFK and syndicated via Westwoody One) on the other hand are a bunch
of morons that I've wanted gone for quite a while.

The reason any of these pathetic idiots stay on the air is ratings and
money. Doofus, being the jerk he is, actually attracts listeners. I
know it sounds strange, but you have to understand the mentality of
the average mail listener out there is probably that of an average 4th
grader. Probably the same reason that Stern does so hot in the ratings
as well, even though I find his show BORING!

But that's my 2 1/2 cents

Dave
(who also lives in the DC area)

I really wish the media had the kind of social power we're accused of
having. I recall Rush Limbaugh trying very hard to get Dubya Sr.
elected. Didn't work. 97% of the population isn't listening to the
show. It's entertainment. Once a personality has a mission, the
numbers begin to slip.

I suspect your daughter will have more influence over the guys she
dates than shock jocks will. If you've raised her right, she'll dump
any jerk that doesn't show her basic respect and consideration.

If you believe you have any chance of increasing the intelligence of
sports heroes you're a braver man than I, Gunga Din.

>Only people with no integrity can conclude that the only way to be
>different is to be gross and then jump on in. What a sad waste of human
>potential. Not funny at all.

You're awfully quick to claim people who don't agree with you lack
integrity. If you're complaining about sex talk on radio it's going to
fall on deaf ears. I find it juvenile but not particularly damaging
for kids to hear watered down versions of what they hear on the
street. If you're complaining about jocks advocating abuse of women
I'm 100% on your side. If you're complaining about Gloria Allred
advocating abuse of men I'm also 100% on your side.

>I don't listen to the show. My daughters don't listen to the show, but people
>we must interact with reveal all the signs of this corrosive attitude. What are
>YOU doing about it?

I'm not hanging around with people with corrosive attitudes.

Newsgroup: rec.radio.broadcasting
Date: 2000-09-26 00:00:00 UTC
From: Roy Cunningham <music@harborside.com>
Message-ID: <ZU2A5.28140$A4.854249@news1.giganews.com>
Source record: 17286

Hi There,

Recently, my GM and SM made a decision to allow me to produce music for clients' ads. I have DAW at home.

The result has been an increase in revenue and AEs with more confidence they can deliver a good product. Our station image is reaching a higher perception level among local listeners.

So .... (keeping the above to a couple of sentences only)

Are there others of you out there that use your own productions OR do you ever employ an independent musician (not a jingle house) to compose and voice ads, etc.

OK ......

Here's the other stuff -

I use Cakewalk 9.0; S.A.W. - 550 mhz P3, 128 meg RAM

Alesis QS6; Line6 PodPro; Behringer board; Alesis Quadraverb, Alesis NanoCompressor, Shure SM57. (I'll be buying a newer large diaphragm mike soon)

Everything's dumped to CD. I'm buying a mini disk to avoid any problems with CD readers.

I've done about 300 ads (70%) with background music so far this summer.

THANKS,
ROY

>getting rid of the "Hot Talk" trend in radio programming. I just get so furious
>when I hear the lame, boorish, mean-spirited, un-creative stuff that seems to
>be the norm on these stations.

The only thing that will stop such behavior in its tracks is if they
slip up and say something so outrageous and ignorant that a whole
community organizes against the station. Doug Tracht (the Greaseman)
did just that while working at WARW a couple years ago.

Unfortunately, anything less will simply be obscure.

>Recent posts were in disbelief at how far down Mancow will stoop. Here in the
>Washington, DC area the disease is known as Elliot on DC101. The station and
>show only survive by appealing to the rebellious, bird-flipping instincts of
>young male listeners. (I already exercise my right to avoid tuning in.) But by
>cultivating these instincts when there are SO many other things that need to be
>cultivated in young minds, the station is taking a direct role in the
>destruction of the community it serves. It's a disgusting show of
>irresponsibility.

Disgusting behavior by high profile people can be found almost
anywhere you look. What's your point? Does a radio station have a
responsibility to broadcast "good" things? If so, who determines what
"good" is?

The facts are very plain that our society has a bunch of young male
listeners who choose to express their rebellious attitudes by
listening to obnoxious people. Don't the audience (and their parents,
teachers, and community leaders) bear some responsibility?

>The DC area already had Don and Mike and Stern. These guys often go too far and
>are pathetic role models for young men (especially Don - don't get me going!)
>But Elliot's brand is SO lacking in couth that I just HAVE to do something.

Write a letter to the station. Organize a boycott group against the
station owners and advertisers. Write letters to newspapers. If
these guys are as outrageous as you claim, others will follow. And if
they don't, maybe you need to recalibrate your sensibilities.

>I know it's naive to think the FCC can ever substitute for community concern
>and action. Isn't there something I can do short of obsessively targeting show
>sponsors and burning up my own valuable free time? Isn't there a GM with a
>conscience who can be reminded to just say "no" on principle and a sense of
>debt to the community?

The goal of any radio station is to attract money (yes, even NPR has to get it somehow). No, there is no other way. Some will stoop lower than others to put outrageous programs on the air. And someone with no more self respect will listen to or watch it.

Just as pornography is a matter of opinion, so it is with radio programs. That's why there are so many stations on the air. You really don't want to start regulating program content. The best you can hope for is a boycott. When stations can't make money by broadcasting filth, they'll stop.

I was sorry to see Tracht & the station knuckle under. The right line
(because true) would be it was a joke. The humor, such as it was,
was in offending the self-righteous and the hand-wringers and the
finger-waggers and the hysterics; as it is in Eminem, and in Stern
when he does something ``outrageous.''

You go through life being taught nicey-nicey things and your young interest
in these radio programs is your sotto voce answer to hysterical authorities.
Your reaction to nicey-nicey things cannot be counted on, is the answer.

I heard Stern called Air Florida after a DC crash and asked the fare
from Washington National to the 14th st bridge, and some stations cancelled
him for this outrageous thing. Hearing of it, I thought it was a very
creative send-up of the standard media posturings that seek the entertainment
value of disasters and tragedies. Unfortunately Stern is boring
at my age almost all the time.

Imus is better, but it's another kind of humor against another kind of
posturing, sort of an attack on institutional seriousness.

That's the shock in shock jock, but the targets are quite varied according
to the show.

>specialized music and talk subject matter, will be best served by some form
>of internet broadcasting. To further endanger the technical balance of the
>AM and FM bands with flea power stations is not the way to go. My opinion.
>thanks for respecting it.

And i agree with you whole-heartedly on this, David, especially from reading Scott Fybush's summaries on his Northeast Radio Watch of the LPFM applications in his neck of the woods--most of them from evangelical Christian organizations, most of which will be probably be satellite-fed. In other words, nothing new--and even when the LPFM advocates admit it, they still make the unrealistic claims of "bringing the airwaves back to the people." For an example, check out the San Francisco Bay Guardian's coverage of the NAB show, which was heavily anti-NAB and pro-LPFM (and included another "Save KPFA" call, for good measure):

http://www.sfbg.com/nab/

And the thing is, the real fighters of corporate capitalist AmeriKKKa who want to provide their vision of alternative, community aren't going to seek an LPFM license--they're going to remain pirates like they are now, as in this article from Chicago alternative newspaper Newcity (which includes the legit and very commercial LesBiGay Radio, which brokers on WSBC and WCFJ in afternoon drive)--go to www.newcitychicago.com and scroll down to "Features" and "Low Fidelity."

In short, I'm afraid LPFM is a great idea, but it's not going to work.

Imus didn't do all that well in Boston, AFAIK. WEEI is a WFAN copycat
and jettisoned Imus, bringing in reporters from the local media to do
the morning show. Imus is now on a startup FM talk outlet.

Any 40s era tube set? Bull-oney. Most of them only had a single IF bandpass, which was only good out to +/- 5 kHz. From what I've seen, wideband IFs were *less* common in the 1940s than in the 1930s, partly because of FM and partly due to postwar inflation (both factors leading manufacturers to leave out lesser-used features).

Telling the truth to pollsters seems to have become, for many constituencies, a good way to assure that their interests and concerns will be ignored, as politicians perform electoral triage, and concentrate their resources and attentions on swing states and "undecided" voters.

Is it your civic obligation to lie to a pollster in cases where your interests will very clearly be undermined, or to either tell the truth or recuse yourself from participation?

If you were a local broadcaster in a non-swing state, is it not true that encouraging your listeners to lie to pollsters would likely a) increase the political clout of your state b) increase the political clout of your particular audience c) increase the likely flow of political advertising dollars to your station?

Have any generally sober and responsible broadcaster commentators taken to advising their listeners to lie to pollsters using this very reasoning? Or is lying here considered as unethical as lying in any other business dealing? Does lying to politicians through pollsters force one to be less indignant, more understanding, when lied to by a pol?

There are some amazing old radios out there. Many of the old console types really do sound good even today. Of course, these outstanding examples were pretty expensive in their day.

In my odd collection of old radios is an AM-SW "Detrola" (No relation to Motorola to my knowledge). It is a table radio housed in a metal cabinet with a very small speaker. It sounds REALLY good! It must have been the equivilent of the Bose Acoustic Wave radios in it's day. AM can sound quite good. Too bad it usually doesn't.

>...as I understand it, that took place when Stern was only on one station >(WWDC-FM in Washington), and he was either suspended or canned outright for it; he went to WNBC New York >shortly thereafter... >>

That is not what happened at all. Stern was not suspended or canned for the Air Florida comments, in fact nothing happened because of them. The crash was in February of 1982. Stern didn't call Air Florida, he *pretended* to call Air Florida. The Air Florida plane crashed because they had neglected to de-ice the wings during a snowstorm. When he made the comments about the cost of a one way ticket from National Airport to the 14th St. Bridge he wasn't making jokes. He was making a point and expressing outrage at the negligence that cost these people their lives, he was not being "funny ha ha."

Stern didn't leave WWDC until August of 1982. While it is true that he was fired with two months left to go on his contract it was kind of a moot point since he had already signed the deal to go to WNBC several months earlier and was just working out the final time on his contract. WWDC didn't fire him over the Air Florida comments, they made up some other BS excuse about him talking about other jocks on the air. The real reason that they fired him was that they wanted to bring in the Greaseman in as soon as possible.

When Stern left WWDC an article appeared in the Washington Post (the Moonie paper) that claimed that he was fired over the Air Florida comments. It wasn't true. If you look at the chronology of events that doesn't even make any sense. Let's see, jock makes supposed offensive comments in February, station lets him go in August, yeah right.

I think that part of the reason that this story lives on is because of people who don't understand and are jealous of Howard's success. Howard Stern is incredibly talented he has completely revolutionized this business. He has a brilliant, quick wit and is a cutting social critic.

He also has an incredible ability to talk to people on a one to one basis and get them to open up, to forget that they are on the radio. Howard can talk to the biggest Hollywood star or the cleaning lady and make it dynamic, interesting and compelling. It is a great talent and he should be respected and looked up to for it.

Some people don't understand his success and it makes them sick. The continued retelling of this false story, that Howard did something really bad once and got fired over it, seems to be a way for people to dismiss and belittle his talent and influence. It's a shame, because Howard Stern is the

greatest broadcaster of his generation, perhaps the most influential person in radio in the last 50 years.

I'm working on a proposal to replace the cart machines at a local
non-profit station with a computer. They're not heavily used, but
are showing their age. In this case, I need something fairly simple
(and cheap). Doesn't need automation, playlists (although they'd be
nice), crossfades (nice, too), interface to traffic SW, etc. Just
needs to play audio files from a simple UI, reliably.

I'm aware of drs2006, AudioCart, AudioWolf, RadioCart, and a few others.
I've even done this with Internet Exploder and windoze media player.

Any other suggestions for something -inexpensive-?
(Proposed system is WinNT, Tyan/AMD 500MHz, TB Montego audio).

Tankx,

z!

I liked the time he so mercilessly mocked Mike Wallace that Wallace
called in.

After one of the mocking bits, the best being McCord and Imus alternately
scaling new heights of characterization, simply in filling time -

Imus: Now here's the aforementioned very fine journalist Mike Wallace on the phone..

Wallace: Well you got what you wanted...

He did the same thing to Dick Ebersol yesterday. What kind of person follows
and enjoys that kind of thing? Ie., hearing the Mighty feeling called on to defend their
serious character while knowing at the same time they're being had. Yet unable
to resist! Trembling hand reaches for the phone as if with a mind of its own, and
another fish flops onto the deck.

The question is, what kind of audience enjoys that kind
of thing, and above all what can you sell to them?

It's attractive enough to me to put up a 4-element phased array to pull in
WXYT from Central Ohio.

You don't need the man in the street in Detroit exactly, but you do need some idea
who is listening.

If you have a high-quality AM Stereo radio, AM will sound more than just "quite good". It will sound fantastic! Given a clean, well-processed signal and an AM Stereo receiver with a wide enough bandwidth, it will sound indistinguishable from FM Stereo.

Take a few minutes to check out the Official AM Stereo Web Site at www.AMStereoRadio.com. It is a non-profit web site dedicated to spreading the word that AM doesn't have to sound bad. It contains listings of stations that broadcast in AM Stereo, radios that support AM Stereo reception, and much more.

A Century or so ago, most people thought that the Impressionists were horrid. And among those who did like the school, there were those who hated Pissaro and loved Seurat.

A response might be, "Oh, but that was fine art." Well, at the time it was considered vulgar and a debasement of art.

It is all about taste. I don't care for Stern, but occasionally find his outrage and temerity refreshing in our nation of PC correctness. He's a contrast. He is different. He is not for everyone. But he may in fact be great. Or at least important to a certain group. "Sick" is in the eyes of the beholder. You find sick in Stern, I find it in most golf pants. Like I said, a matter of taste. But I don't expect everyone to follow my choices.

Unless you are driving in a low signal area or in and out of directional
pattern nulls, or get reradiation from power lines and such. Etc. Am stereo
basically sucks.

And if you can find a station with programming you care about broadcasting
in AM stereo. About a quarter of the AM stereos that are on the air are
extended band facilities that had to do it to get their license. And have a
good time finding AM stereo receivers. Instead of pursuing this very dead
issue, more attention should be put on getting an IBOC system approved and
implemented before digital deliver via other methods becomes the best
option.

Unfortunately, he'll provide so much free advertising for the station his goal will be lost as people tune in to hear what all the fuss is about. Most people will either like what they hear or be bored with it and go about their business.

I'm still uncomfortable hearing that stuff on the radio. I was taught it wasn't proper stuff for broadcast. I hear it every day on the streets, so I'm not sure that radio shouldn't reflect what people actually do and say.

Even though I may be uncomfortable with it, I can't see radio's "power" to corrupt. I give all that power to their parents.

Roy writes:< Recently, my GM and SM made a decision to allow me to produce music for clients' ads. I have DAW at home. Are there others of you out there that use your own productions OR do you ever employ an independent musician (not a jingle house) to compose and voice ads, etc.>

Sonic Foundry's ACID software makes it a breeze to put together music for spots. It uses prerecorded loops that you can slap together to create some pretty sharp sounding stuff. You can put together basic tracks and record your own instruments on top of them or create polished sounding music built out of the loops alone. They have a wide variety of loop libraries to sample out of.

You can get a free demo version of ACID from sonicfoundry.com and you can hear examples of tunes make by folks who use ACID that have been uploaded to acidplanet.com.

The vast majority of (and I should have qualified this) the console type
"living room" radios of the 40's were quite hi-fi. I have used a number of
them, including one I had as a monitor for many years. As they were built in
an era when there was a combination of fewer stations and greater interest
in DX, the receivers were more sensitive, and a more carefully tailored
bandwidth and a bigger audio output.

This is without getting into the receivers that were hot for DX purposes,
which had even better characteristics.

>Yes, there was a descending spiral of receiver

Well, I have done proofs using several of these receivers as a cross check,
and been able to hear well above 12.5 kHz audio (granted, I was younger and
could actually hear those freqencies!) on a variety of them. The NRSC mask,
cutting off at 10 kHz, would not allow this to even be transmitted. I could
also get several transmitters to perform quite decently up to about 15 kHz,

with a fast rolloff after that (in part due to antenna matching).

>
> A typical "40's era tube set" is not a "Dymek" by any stretch of the
> imagination.

I'd say that some of the better receivers of the era (post-war,
pre-transistor) were better than the Dymeks. And I have owned several of
each.

Sorry. Should ahve qualified that to the "living room" sets that had an
optimum combination of selectivity, bandwidth and selectivity. Either that,
Or I had a lot of luck buying them at random for monitor receivers in the
60's...

>Most of them only had a single IF

Actually, there was still a design criteria based on fewer stations and more
interest in DX reception that resulted in mid to upper range receivers
having very nice audio.

The only IBOC AM digital systems I have seen proposed will further
destroy the AM band. They occupy way more than present station
bandwidth. Is it worth that to get "Real Audio"-like quality?

Silk purses can't be made from 10 kHz bandwidth, especially if you
continue to send analog. You can't stop sending analog during a 20+
year transition
period or _no_one_ will listen to AM.

Quick, how many of you think analog TV will be turned off on the FCC's
short time schedule?

Indeed, IBOC FM rather puts the lie to the "we can't relax separation requirements for LPFM without causing interference" argument.

FM allocations were established on the belief that regular FM would be used - that the amplitude of the sidebands would decline with distance from the center of the channel. Receivers are made on that assumption. Now, we're proposing establishing a system that will put significant energy at the outer edges of the channels. If you own a suburban Class A on a 400kHz split from a center city station (for example, the 103.1 doublecast in suburban Chicago, between WVAZ 102.7 and WUBT 103.5) you'd better be ready for increased interference...

Or maybe not. Maybe FM radios have enough selectivity to accomodate the energy in new parts of the band?

The truth lies between. Better radios will have no problem. (either with IBOC or LPFM) Poorer radios will have problems.
(FM DXers are already reporting some interference from IBOC tests - and they generally use receivers of the highest selectivity)

Interesting. When I was growing up in NYC in the 1960s, I was isolated from contemporary pop music until about 1968, when I got a transistor radio of my own. Before that, I did not have control of the radio dial, so I had to listen to whatever my parents listened to. My father mostly listened to jazz (WRVR) and occasional talk shows (WLIB, WBAI). My mother listened to news (WINS) and easy listening (WPAT). When WOR-FM picked up the Drake format, my father started to listen to it so that's how I got exposed to it. But neither of them listened to top 40 with any regularity. When I got my own transistor radio and an old AM/FM/MW radio that my parents didn't use any more, I was then able to listen to whatever I wanted. That's when I really got into Top 40.

>Interesting. When I was growing up in NYC

There's the key. You grew up in a major market, which even in the
1960's offered choices not available in much of the country.

>in the 1960s, I was isolated
>from contemporary pop music until about 1968, when I got a transistor
>radio of my own.

In a lot of places, folks had no more than four or five stations from
which to choose--none of which would have offered such formats as
talk, all-news, classical, jazz, or any variation of rock other than
top 40, which at the time included the hits and nothing but the hits.
I started my career in a 4-station market--one top-40, one
"all-over-the-road" AM station which basically used pop music as
filler between news features and ball games, one standard adult pop
music FM (which overlapped with top 40) and one "beautiful music" FM.
Not even a country station! And in those days FM listening was almost
nil, and only radio geeks even knew there existed such a thing as an
FM car radio. In the market where I now work, one top-40 station had
audience shares exceeding 50 through much of that decade. That meant
that even if you didn't like it, you were bound to be exposed to it at
some point almost every day. There was hardly an adult who didn't
hear the Beatles to the point of being able to instantly recognize
them, even if he/she hated them.

This was the reality of radio for the vast majority of Americans in
those years. Today the medium-sized market in which I work has 30
signals and the number-one station has slightly less than a 10 share.
The number two station has a format that didn't even exist in the
60's. And of those 30 stations, I can tell you there are at least 20
that I _never_ hear--and that includes all varieties of CHR, which is
what we now call top-40. I cannot recognize one song on the R&R
charts those stations use, nor could I identify any of the artists

they play if I heard them. It's very easy to avoid it all. We can all lock ourselves up in our little cultural niches now, and not be bothered by anything that might even slightly displease us. How times have changed.

And don't misunderstand me--I'm not saying this is a good thing. It just _is_.

But this seems to disprove your theory that having a lot of signals pushes down the common denominator. In NYC in the 1960s, there were more signals then than there are even now in your market, but there was no "shock jock" getting competitive audience numbers. The closest thing, I suppose, was Imus on WNBC, but I don't imagine he was getting anything close to the shares Harry Harrison was getting. In fact the 1960s NYC radio landscape seems to get some of the highest praise on radio-oriented newsgroups; witness the complimentary remarks on all of the classical stations, progressive rock stations, news stations, and even Top 40 stations of that time.

On the other hand, if signals are added to a market *for the express purpose of broadcasting "lowest common denominator" material*, then it will push down the common denominator.

Not at all. In the 1960's, even major markets with their more diverse populations were not saturated with signals as they are today. Just for starters, FM was not a factor at all.

Now, even the smaller markets have dozens of signals. In majors, hitting "scan" on a decent car radio can turn up a station on almost every frequency. It is _not _ the same, in large markets or small.

"There are some amazing old radios out there. Many of the old console types really do sound good even today. Of course, these outstanding examples were pretty expensive in their day."

I've got just such a set, a 12-tube Silvertone from their 1935-36 line. This has a *mechanical* selectivity control that moves the cores in and out of the IF transformers to change their Q for high fidelity or DX listening. (Why 12 tubes? Four of them are audio power output, and two more are phase inverter stages.) This thing sounds really nice on a good AM signal.

I also own three other wideband AM receivers -- a Heathkit BC-1A tuner (late 1950s, popular for AM-FM stereo), a 1985 Delco-GM AM stereo car radio (which doesn't work) and the Sony SRF-42 AMax stereo Walkman from several years ago. I no longer have the receiver that got me interested in wideband AM; that was a little Japanese crystal set that I had when I was a kid, in the early 1970s. This of course had very little selectivity (since it only had one tuned circuit) so it had no trouble passing everything a station could transmit, and if I pressed the earphone tightly into my ear (for more bass) I could hear one Top 40 AM station with sound as good as I'd ever heard (even on FM) at the time.

Perhaps I'm not understanding your argument. The claim you seem to be making is that a large number of signals brings down the common denominator of programming, so people like Stern can get and stay on the air. But this does not explain why in markets like NYC during the 1960s, a large number of signals did not bring down programming quality. In fact, 1960s NYC radio programming seems to rate some of the highest praise in these newsgroups.

Regarding Imus, I could've sworn that I was hearing those "Are you naked? Imus in the Morning!" promos during the late 1960s, but perhaps I'm mistaken.

Finding a generally sober and responsible broadcaster may be more
difficult than answering the question about what they've done.

Remember, polls use large sample sizes (generally larger than 600) to
wash out misleading statements. You'd have to have a substantail part
of the population lie the same way to pollsters. I'm not saying this
won't happen, but that would represent a consistent public opinion in
itself.

Because there were far fewer signals there than today, when you
consider the fact that almost no one listened to FM back then.

> In fact, 1960s NYC radio programming seems to rate some of
>the highest praise in these newsgroups.

I wouldn't say it was "better," because that term is so dependent on
the point of view of the evaluator, but it was not as coarse. One
did not hear things on the air that one would not hear in "polite
company." Whether that is better or worse, I leave to you.

>
>Regarding Imus, I could've sworn that I was hearing those "Are you
>naked? Imus in the Morning!" promos during the late 1960s, but perhaps

Imus was the start of something that got much more prevalent later on.
In many ways, Imus showed the rest of the industry what it could get
away with. IIRC, he made his first big splash in the early 1970's. I
was working upstate in those days, and that's when I first became
aware of him.

BTW I personally think Imus was a lot more entertaining in the early
days than he is now.

OK, I understand what you are trying to say.

On a somewhat related note, you've indicated that you've had success with your stations and have not had to sink to the level of Stern, etc. To what do you attribute this to? How long do you think it will last? Do you think your stations will be able to continue as they have in the face of continued urbanization of Central California? People from the LA and SF areas are moving to the Central Valley in droves, and bringing their entertainment preferences with them. Do you think your stations will be able to survive the pressure to program to them?

First let me emphasize here that what I am about to say is strictly my own opinion, not that of my bosses.

We have a long heritage in the market (35 years under the same ownership with the same format). Country music listeners are generally less tolerant of the sort of bathroom humor that Stern and his clones tend to spew, and Bakersfield is culturally more Midwestern than Western, thus more conservative than other California cities. We also have on-air people with a great deal of longevity and a very high profile in the market. Our afternoon drive jock, for example, has been with the station for 23 years and before that was a top-rated top-40 jock in the market. Our morning jock was born and raised here, and knows the town in a way only a native can. People have literally grown up with us. At the same time we have kept the music and the overall "sound" of KUZZ as contemporary as possible, and we have never succumbed to the temptation to cut out the service elements.

> How long do you think it will
>last?

I don't know, but I can see it ending sometime. Our shares have been declining for a decade, although we are still #1. Some of the biggest inroads have been made by relatively raunchy syndicated morning shows (Mark & Brian, Bob & Tom). We have continued to maintain a "family-friendly" policy, meaning we avoid doing stuff that parents don't want their young kids to hear, we don't offend ethnic groups, and we don't do humor that victimizes people.

>Do you think your stations will be able to continue as they
>have in the face of continued urbanization of Central California?
>People from the LA and SF areas are moving to the Central Valley in
>droves, and bringing their entertainment preferences with them. Do
>you think your stations will be able to survive the pressure to
>program to them?

It's going to be increasingly difficult. The big problem is audience fragmentation. To maintain our high-quality operation requires a large audience--if we're not getting big numbers, it's difficult to afford the overhead. This is especially true of our expensive news department, which is something most music stations got rid of years

ago. My management assures me of a 100% commitment to continue this effort, but I can see how that could change someday if the ratings ever got to a certain point.

BTW, This is why I have been such a vocal critic of Docket 80-90 and LPFM, and now satellite radio. People need to understand that it's not the Cheap Channels of the world who get hurt by this stuff--it's operations like ours, locally-owned and operated and committed to quality, that find the economic base for that quality being cut out from under them. In fact, the fragmentation helps the mega-consolidators. They can sell five or six stations in combo, against our two (KUZZ AM & FM simulcast all but four hours a week). The more stations there are to peel off another tenth or two from us, the better the big groups look to the agency buyers.

OTOH, we _are_ very well established with our client base and our P1 listeners. The management is not ready to retire. We own our real estate. We still make money. And we don't have to answer to to some pinch-penny corporate suit who's only worried about tomorrow's stock price, and demands $1.50 spending cut for every dollar of revenue shortfall in a bad quarter. We intend to fight the good fight as long as possible.

NY had relatively few full signal AM's in the 60's, compared to the
combination of improved AM signals and viable FMs today.

AM had, viable, 570, 660, 710, 770, 880, 930, 1010, 1050, 1130 and maybe
1560. Limited signals included 620, 820, 970, 1190, 1280, 1330, 1380, 1430,
1480 and 1600.

The choices today are far greater as several of the AMs that were not full
MSA signals are now or approach that level, such as 820, 1280, 1190 and
1600. Plus the FMs are now competitive and get ratings. 60's programming, on
the other hand, was wonderful for the 60's but not by today's standards.

WVNJ 620 was nearby and supplied (through a crystal set circuit) the DC necessary to power a CK-722 radio tuned to WOR, one of the projects in the Raytheon CK-722 book. ``As close to something for nothing as you'll get,'' I recall the book said.

I assume the effect was to weaken WVNJ's signal a little, probably contributing to their demise in Livingston NJ.

Sucking power out of nearby stations apparently isn't done today, even by hobbyists. But enough crystal sets like that could take hot talk off the air, and you listen to something else while you do it.

I saved some of Imus's recent comments on Ted Quillin, who had
sent Imus some fan mail. The intricate weaving of praise and
put-down that went on for about ten minutes was remarkable, and
was in the end meant as a tribute to TQ as only Imus could do it.
(The two borders being not wanting fan mail (one up) and TQ's influence
on Imus (one down), and a signed tapestry in between. The playing
of two borders is an Imus signature; the other person is fairly
uncertain how to respond if he's on the phone, and it's amusing
if he's an important person, say a news journalist.)

If you don't follow carefully, you'll miss what Imus is doing.
It's a set-up, not a put-down.

If I find some space I'll put the TQ up.

4338. W4 Country returns to Metro Detroit

Newsgroup: rec.radio.broadcasting
Date: 2000-09-29 00:00:00 UTC
From: zman6754@aol.com
Message-ID: <20000929204909.08103.00000277@ng-bk1.aol.com>
Source record: 17245

From www.michiguide.com....

September 29: Last updated: 6:24pm

Ann Arbor's 102.9 WIQB abruptly switched formats from Rock to Country this morning at 10:00am following the Bob & Tom Show, bringing back the name W-4 Country to Southeast Michigan. The WWWW-FM call sign currently resides on Clear Channel sister station 'Alice 106-7' in Detroit, the previous home to W-4 Country from 1980 until September 1999. Expect the WWWW call sign to move to 102.9 in Ann Arbor with 106.7 Detroit getting a new sign - WLLC - to go with its 'Alice' moniker. The format switch happened rather smoothly- during the Bob & Tom program, the advertisement breaks were replaced with rock songs and the former 'Rock 103' liners. Just before 10:00am, the station played its spotload and at about 10:03, announced 'Your listening to Great Country Favorites on 102.9 W-4 Country' followed by Toby Keith's Country Comes to Town. WIQB has had a rock-based format since 1975 until today's switch.

I had totally forgotten the WNYC 830 days. As I recall, it was the only NY
signal I never picked up in Ohio in the early 60's.

I'd consider using the Compellor first in the chain since it is a great, almost transparent AGC. The Mastercom will not have to work so hard behind the Compellor. I would recommend setting the Mastercom with a quick attack and slow release, the Compellor can be more agressive. Tom

Source record: 17302

I was wondering what procedure most AMs use for their required annual NRSC Bandwidth measurements. Since spectrum analyzers are quite expensive some stations opt to use other means. I know of one engineer who said he's used a splatter meter. I know of someone else who uses an FIM. Although legal this can be quite tedious and time consuming. The FCC established their standards using a specific analyzer. Other stations seem to just overlook this requirement entirely. Do some of the big companies have a spectrum analyzer that gets passed around?
It appears to me that arranging to have these measurements done may be a problem to some stations. Last year when word got out that I do them around the CT & NY areas a few engineers said "Can you do my station too?". This year I anticipate even more added to the list of regulars.
So what does your AM station do?

4350. WHY Rush will have another down book

Newsgroup: rec.radio.broadcasting
Date: 2000-10-01 00:00:00 UTC
From: cookeh@aol.com
Message-ID: <20001001093144.29574.00000005@ng-df1.aol.com>
Source record: 17307

Radio owes Rush. In the early 90s, he led a Talk revolution that rejuvenated the AM band. Even today, I'd rather play with him than against him; and I do both, depending on which station I work for in the market.

Why: Radio listening is habit, and Limbaugh is established, a voice as recognizable as Paul Harvey's or Casey Kasem's.

Lately though, I catch myself saying "angry, self-centered," as though that was his first name, and "Rush Limbaugh" was his surname. And he deserves it. This gifted performer got where he is by doing a different show than he's been doing for the last two years. Once entertaining, he's become a wearisome one-joke act since Bill Clinton beat Removal. Limbaugh now consistently commits Talk radio's two cardinal sins:

1. He's too predictable. Talk radio should be full of surprises, but you know right now what Rush will say tomorrow.

2. The show has degenerated into a monologue, while the power of Talk radio is dialogue. Callers who do get past screeners are there to agree with the host. Merely presiding over a forum for the like-minded squanders El Rushbo's considerable talent. Where are the sparks that make Talk radio sparkle?

Conspicuously missing is one technique you hear from radio's most-consistently successful hosts: They litter their rap with "YOU" and "YOUR," framing whatever's up for discussion in terms the listener can relate to. But lately, Rush is all "I," "I," "I," and "ME," "ME," "ME."

Early-warning signs that this will translate into ratings trouble: Listener comments such as:

"TALKING ABOUT PLAYING AT EXCLUSIVE COUNTRY CLUBS IS OBNOXIOUS." Frequent nonchalant references to his rich man's lifestyle make Rush less relatable to the common folk who take the time to fill out a diary.

Suggesting that "TALENT ON LOAN FROM GOD" and other repetitive braggadocio once sounded more jolly, one listener actually told me "HE WAS MORE FUN WHEN HE WAS FAT."

Another red flag: Sales…

How many affiliates can point to big Rush-specific sponsorship revenue? Many stations make more money on weekend "how-to" shows. During the last round of clearance fee increases, station managers were asking "HOW CAN I POSSIBLY MAKE MONEY ON THIS?"

Hit-listed by several national advertisers, the E.I.B. Network has lately been hawking gold coins recovered from sunken treasure ships.

In the September issue of my monthly newsletter, I outline three Rush Limbaugh strategies:

1. How to handle the coming rough sledding ahead if your station HAS Rush.

2. What to do if your station COMPETES with Rush.

3. And what to do if -- like many Talk stations competing with Clear Channel-owned stations -- you're about to LOSE Limbaugh.

You can download this newsletter FREE, in its entirety, on my web site, www.HollandCooke.com.

Source record: 17308

If you didn't get to San Francisco, here's the headline...and two research presentations leave NO doubt:

It's radio dot com.

I've made similar statements ever since Arbitron and Edison Media Research teamed up for their first Internet-and-Radio study, and they presented #5 at this year's NAB Radio Show.

To its authors' credit, the only thing I found startling about this one (subtitled "Startling New Insights About The Internet And Streaming") was how logically it tracked preceding studies, and how specific and actionable its recommendations are.

Bottom line: Listeners will never again use radio they way they did when-we-got-into-the-business.

This year, NAB attendees also packed a meaty Arbitron/Coleman Research presentation "The Broadband Revolution: How Superfast Internet Access Changes Media Habits in American Households."

Radio people are quick to blame changes in their own lives to radio industry consolidation. This Coleman study demonstrates how much of what's made YOUR life different is attributable to technological changes in LISTENERS' lives.

You can download both studies FREE and in their entirety at my web site.

Also there, HEAR webcasts of selected NAB conference sessions, including the Arbitron/Edison presentation. You'll even SEE the slides they showed, on your Windows Media Player.

Best regards,

HC

Source record: 17309

Web site? Web site?
Why bother? Haven't you got your hands full running all those radio stations?

I'll give you two reasons:
1. More money. Eye-popping station prices during the recent consolidation feeding frenzy have mortgaged many stations to the point that on-air commercial inventory might not yield enough revenue to make budget.
2. More ratings. Use it right, and the Internet can build share LOTS better than commercials in "Frasier."
And I'll give you a third reason. It's not as URGENT as making next month's budget or pumping the next book. But will become more IMPORTANT: The Internet is dress rehearsal for your station's digital future. In just several years, you'll be doing on-air what smart stations are already doing online: multicasting.
Read "Tips for your web site," updated DAILY...on my web site.
Best regards,
HC

4354. Something new for radio to worry about?

Newsgroup: rec.radio.broadcasting
Date: 2000-10-01 00:00:00 UTC
From: cookeh@aol.com
Message-ID: <20001001095220.25365.00000013@ng-cs1.aol.com>
Source record: 17311

Or to pre-empt? Or exploit?
Internet stocks ARE still hot, though the market is smarter today than it was a year ago, when an IPO by anything-dot-com often raised more money than the company was worth. Watch where smart tech investors are putting money today, and you'll see a more discerning interest: Internet applications.
Lately, Wall Street is paying attention to one killer app radio should be paying attention to: "Voice Chat." That's right, just what it implies, Talk radio without the radio.
And before you dismiss this looming competition by saying "BUT WE'RE LOCAL…"
1. Quickly calculate what percent of what's coming out your speaker does not originate in your city. And…
2. Assume that Voice Chat can be local. Text Chat already is. AOL, Yahoo! et al enable users to create their own local Chat room sessions. So it's prudent that we expect that folks will be able to convene local Voice Chat sessions too.
And before you dismiss this looming competition by saying "BUT WE'RE PROFESSIONALS," note the ratings for CBS-TV's "Survivor," which was peopled only by "real people."
1. What's contagious, habit-forming, and magic about the Internet and the software that probably came pre-installed on your computer is the do-it-yourself factor.
2. Users don't NEED professionals to book travel, buy stocks, or…soon…host an online Talk show.
I detail how radio can get out in front of Voice Chat in the September issue of my monthly newsletter.
Download the whole thing FREE at my web site.
Best regards,
HC

DaveSproul <davesproul@aol.com> wrote:
>Someone who posted that the real cause is the number of stations competing has
>it right.

The problem I have with this argument is that if we limit the amount
of stations to that which does not allow a "coarse" format to go on
the air, we also limit the opportunity for people to run/own stations
that are able to pick up decent ratings/revenues without being
"coarse".

>Only people with no integrity can conclude that the only way to be
>different is to be gross and then jump on in. What a sad waste of human
>potential. Not funny at all.

Possibly, they (the owners/management) of these stations are
desperate. They could also inwardly regret having to run these
formats but feel they have no other choices if they want to stay in
business.

IMHO, the problem has more to do with the price of stations and the
debt service. These factors force a station to make as much money as
possible as quickly as possible, which means they have to air a
"coarse" format if that's the only thing in the market that will make
money. If they could build a new station or acquire one cheaply, they
would not be under as much pressure to repay the debt and could grow
an audience/revenue stream.

4356. Canadian Border Stations affected by U.S. LPFM apps?

Newsgroup: rec.radio.broadcasting
Date: 2000-10-01 00:00:00 UTC
From: Dave Fazakas <dfazakas@MNSi.Net>
Message-ID: <000f01c02b56$2c300420$26351cd0@x>
Source record: 17313

Canadian stations:

If your station lives near the U.S. border, you might want to pay attention to nearby applications for LPFM licenses in the U.S. We discovered that someone was applying for a station on our first adjacent, right within our primary coverage area!

It turns out that there was a problem with the "Channel Finder" program that the FCC offers on its web site for prospective LPFM applicants. For some reason, it left out our station (93.9) when it calculated the channel spacings and allowed the application for 93.7.

Just thought I'd give everyone a "heads-up".

I didn't expect this newgroup for a few more days. I've got several
postings of material on old radios to serve as an early FAQ. We'll want
to refine this, but I told Bill I'd be happy to serve as "keeper of the
FAQ."

One small omission----I don't have any material on acoustic phonographs
(Edison, Victor, Brunswick) besides some historical stuff. My
expertise, such as it is, is in electrical engineering and old tube
equipment. Most of what I have written is either historical or
technical.

As I write this, my old Magnavox AM-FM-SW radio-phono is playing merrily
away outside it's cabinet. I just finished giving it a complete major
overhaul, and it plays "better than new." $25 worth of components and
two days of soldering, along with some minor redesign to take advantage
of modern components, worked wonders.

In the charter, Bill noted that we would not be trying to cover
"boatanchor" amateur radio equipment. Hams use that term for old tube
stuff. However, there is some crossover with communications receivers
```

and home entertainment shortwave stuff. This is reflected in the Rider manuals, which covered several Hallicrafters, National Co., and other receivers. I'll suggest that this group include all radio receivers that cover AM broadcast, shortwave down to 10 meters (30 megacycles/megahertz) and any of the FM broadcast bands (42-50 mc. prewar, 88-108 postwar).

To give readers some idea of the "keeper of the FAQ's" background, I am a retired electrical engineer who worked with tube equipment when it was new, and am now an historian of technology (primarily aviation).

I'll be watching to see what questions get asked, now that we've got this newsgroup.

An very short example from last Wednesday of Imus playing a couple of borders, on Barbara Streissand http://home.att.net/~rhhardin/imuscut.streissand.ra (32k)

If it had developed further, he could have taken either side and then found yet another heretofore invisible distinction to seize onto and talk between.

It's a parody of complexity.

Imus does this again and again, with the active guidance of McCord to fill the pauses and find the just word for one side or the other of any newly discovered distinction.

It's far from a ``curmudgeonly put-down.''

Rush has, IMHO, always been an "I", "I", "I", "ME", "ME", "ME" person. The fact that he refers to listeners as "you people" consistently just irritates the hell out of me. There is too much Rush, and not enough "you people" heard.

And I feel he is as much responsible for Clinton's victories as Bush in '92 and Dole in '96 as the candidates. People may listen to him and feel he speaks directly for the republican candidate, dislike what he says, and vote for the opposition.

In New York that wouldn't a problem - as of last week. The New York
Times boosted the power of AM signals in an article on the new Spanish
news station.

Former 5kw stations now have 5,000 megawatts. 50 kw stations are now
50,000 megawatts. Crystal set no longer are a threat.

4367. New discovery... No license needed to use unlimited power!

Newsgroup: rec.radio.broadcasting
Date: 2000-10-02 00:00:00 UTC
From: "MonsterFM.com" <engineering@MonsterFM.com>
Message-ID: <8rb2bceit1@nnrp1.deja.com>
Source record: 17323

First and foremost, I should note that this totally new and revolutionary approach to use of the electromagnetic spectrum was inspired by non other than our field engineer, Jody "The Grinder" Ritchie! That's right! Jody! Now, onward and upward with the news of our discovery:

It seems that there actually exist two completely seperate electromagnetic spectrums! Almost like a parallel universe, these two electromagnetic spectrums coexist in such a way that, in some cases, one is totally undetectable from the other and, yet, a total and complete sharing of information between the two is possible. For lack of a better term, we've decided to call this newly discovered spectrum (drum roll, please...): The ANTI-SPECTRUM!!!
The Anti-Spectrum is, in a sense, easy to understand. As an example, in order to generate a signal at 1,000 KHz. (I'm keeping this really simple), one simply constructs an oscillator and supplies it with a properly cut and loaded crystal and the desired signal is generated! Now, in order to generate the same signal and have it appear in the Anti-Spectrum is no big deal. In fact, the same signal generator discussed in the example above will suffice rather nicely! All one needs to do is to INVERT THE OUTPUT so that the 1,000 KHz. in the electromagnetic spectrum is now totally inverted (with relation to what is WAS) and is now no longer a signal in the electromagnetic spectrum but, indeed, is now a signal in the Anti-Spectrum! The Anti-Spectrum, being a newly discovered "occurance" at present, would appear to be totally unregulated by government or, for that matter, ANY regulatory agency. The Federal communications Commission has been granted authority to regulate the electromagnetic spectrum but, as we are proposing the use of the electromagnetic ANTI-SPECTRUM, we submit that the darned thing is absolutely free of any governmental regulation whatsoever until congress creates the ANTI Communications Commission. Further, we submit that, as soon as the ANTI Communications Commission is created, there will be a heavy increase in all taxes applicable to anyone proposing even a local telephone call to a sister of one of your parents... This is why the agency's name will eventually be changed to the "AUNTY" Communications Commission.
Of course, the ONLY antennas to be permitted on the Anti-Spectrum are those which are repeating patterns of various geometric shapes which are repeated in scale down to a microscopic level. These antennas (as they are designed exclusively for use in the Anti-Spectrum, will be called Anti-Fractals. A further generalization would find us refering to them as Anti-Antennas.
The only really hazardous thing about the newly discovered Anti-Spectrum is that, in the event you should happen to (either

intentionally or accidentally) feed your Anti-Antenna with a 180 degree phase variance, you'd end up transmitting in the Electromagnetic Spectrum as opposed to the Anti-Electromagnetic Spectrum and would be subject to immediate death by government employees who would be wearing gas masks and carrying various types of assault weapons. Therefore, we also respectfully submit that it's always best to make absolutely sure that your Anti-Antenna is ALWAYS properly PHASED in order to avoid your existence being UNPHASED and your hobby being PHASED OUT... Especially, when talking to your AUNTY!

4368. An Interesting Thing...

Newsgroup: rec.radio.broadcasting
Date: 2000-10-02 00:00:00 UTC
From: "MonsterFM.com" <engineering@MonsterFM.com>
Message-ID: <8rbb0mlga1@nnrp1.deja.com>
Source record: 17324

An Interesting Thing...

The following article was published Tuesday (July 13th) in the Washington Post. Thought those who were in radio at the time (I was) might be entertained by Frank Ahrens' comments. At the station where I was working at the time, it seemed as if the writers of 'KRP had a telescope and were watching us! But then again, Hugh Wilson (no relation) was on the inside and had seen it all!
Cassie Anderson Wilson
WKRP' Studio Life Now Just a Fantasy Island
By Frank Ahrens Washington Post Staff Writer Tuesday, July 13, 1999; Page C01
Today, in the spirit of doctoral students everywhere, we're offering a dissertation based on a pseudo-intellectual, pop culture thesis: "Commercial Radio in the Post-Telecommunications-Act Era as Seen Through 'WKRP in Cincinnati.' "
"WKRP in Cincinnati" was a CBS sitcom that ran from 1978 to 1982. A wacky cast of radio employees worked at the worst station in the Ohio River city, which had just changed its format from easy listening to rock. Zaniness ensued. Last week, the cable TV channel Nickelodeon aired a "WKRP" marathon, reprising several of the show's most memorable episodes. The Listener spent many happy childhood nights watching the show during its first airing. Now, as a professional radio commentator, it was revealing to watch the shows again, and not only for the presence of Loni Anderson.
Even though WKRP was fictional, many of the show's elements rang true for its era. It was a family-owned station, run by Arthur "Big Guy" Carlson--the owner's bumbling son. The program director--Andy Travis--had the power to switch the format single-handedly. The salesman--Herb Tarlek--was a leisure-suited sleazebag. The station had its own half-witted newsman--Les Nessman. And there were the deejays--morning man Dr. Johnny Fever and overnight jock Venus Flytrap, each of whom picked the records they wanted to play.
Over the past two decades--culminating with the Telecommunications Act of 1996, which lifted restrictions on the number of stations a company can own--almost all of the old ways have changed. In the last three years, commercial radio has undergone consolidation, with a few companies now controlling the industry. Radio stations are now much more profitable but tend to sound alike from one city to the next. Consolidation has spelled the end of quirky stations like WKRP. And it all starts at the top.
"That sort of marginally incompetent general manager like the Big Guy is definitely a thing of the past," says Lee Abrams, program director for XM Satellite Radio. He is a radio graybeard, considered the father

of album-oriented rock radio. "Now [general managers] are more marketing-savvy and more business-oriented." WKRP would no longer be owned by a single person. Instead it would be one of 300 or 400 stations owned by a huge corporation such as Clear Channel Communications or Chancellor Media Corp.

Unless a station is all-news, it is unlikely today that it would have its own Les Nessman. Stations now buy their news and traffic reports from companies such as Metro Networks and Shadow Broadcast Services, where one reporter files essentially the same news report--often under pseudonyms--for several stations.

The antics of Dr. Johnny Fever, who veered between episodes of high-volume logorrhea and narcolepsy, would not be tolerated today. "There are fewer Johnny Fevers working today as consolidation offers fewer opportunities for 'burnouts,' " says Abrams. "In the '60s and '70s, you could hire a burnout for name value. But today, no way." Even though Fever never approached the tastelessness of a Howard Stern, Stern shows up for work on time and makes millions for CBS.

Then there's the issue of what gets played on the radio. The format of WKRP was always somewhat unclear. In the mornings, Johnny Fever played rock. But on the overnight, Venus Flytrap burned incense and candles and played slow-jam soul. But they both picked their own music (vinyl!), something that ended even before "WKRP" began airing in 1978.

Why?

"Corruption of the deejays," says Abrams. For years, deejays were the all-powerful gatekeepers for new music--if they didn't play your record, nobody heard it. Therefore, they were regular recipients of payola from record companies and band promoters (everything from cash to tour jackets to drugs).

Also, deejays were the arbiters of taste, playing songs they liked. Today, program directors are in charge and they rarely play a record based on gut feeling.

"In the '70s at WKRP, Andy Travis would walk a new song in and it was a hit," says Sammy Simpson, promotions director for Z-104 (WWZZ-FM) and a radio veteran who admits to owning a few "WKRP" episodes on videotape. "In radio in 1999, you not only have a [program director] that is good at his job, you've got research on an ongoing basis, auditorium testing, focus groups, knowledge and literature and facts and even record sales that will tell you these songs are from the Top 10 albums being bought, so people like them, so we ought to play them. The technical side of that has given [stations] so much information on how to create a playlist."

Radio stations say the technology has helped them play what the listeners want. Critics say it makes the stations sound more homogenous.

There is, however, one thing that has remained unchanged from the WKRP era, Abrams says.

"The Herb Tarleks have multiplied and grown," he says, laughing. "They are a thriving breed."

That article was published last year. Yes, it's interesting, but it's also wish-fulfilment to think that "WKRP" reflected radio as it was. In fact, the point was constantly made in the show that "WKRP" was a maverick station that didn't do things the way they were done in the bland, corporate radio of the time. Remember the episode where the professional radio consultant comes to evaluate WKRP? He tells Andy that WKRP's sound isn't consistent, that they should play the same hits over and over, and is appalled to learn that Andy lets the jocks pick their own music. ("No one's programming their own music anymore," he says.) In another episode, Venus visits a rival station that's completely automated: No DJs, just a computerized system and fourteen advertising salesmen. And in one hilarious bit, WKRP's afternoon DJ is temporarily replaced by "Some guy on tape from Los Angeles," upon which we hear a stilted voice say: "Thanks... JOHNNY... we're broadcasting from... WKRP... in... CINCINNATI..." Howard Hesseman, a former DJ himself, once said that when he met real-life DJs during the run of the show they'd tell him they were jealous of the freedom he had to pick music and say stuff (like "Booger?") on WKRP.

One other thing: the creator of WKRP, Hugh Wilson, wasn't a radio professional; he was in advertising (but he hung out a lot at WQXI in Atlanta).

4374. D.C. Radio Watch / 3 Oct 2000

Newsgroup: rec.radio.broadcasting
Date: 2000-10-03 00:00:00 UTC
From: Max Cacas <MCacas@freedomforum.org>
Message-ID: <9BA8EA456304D311BD800008C7918566015A3D62@mailsrv.freedomforum.org>
Source record: 17330

First, the news:

- The Washington Post's "The Radio Listener" column for today, found at:

http://washingtonpost.com/wp-dyn/articles/A63902-2000Oct2.html

for at least the next week or so (the article moves to a pay archive after about 2 weeks), has details on the latest format change at pubcaster WETA-FM (90.9 FM). The station is dropping one hour of the 2-hour "Performance Today" program from NPR, and substituting an audio simulcast of PBS' "The News Hour with Jim Lehrer", from 7-9 p.m. The column suggests the station is doing it in response to listener demand, but speculates that the move may be linked to a drop in listeners to the station's classical music format. The column also suggests that WETA's move to drop classical music in the morning in favor of NPR's "Morning Edition" has driven classical music fans to Bonneville's WGMS-FM (103.5).

"Listener" writer Frank Ahrens also had some nice things to say about two California stations, KFOG-FM in S.F., and KLOS in L.A., both of which he listened to on a recent West Coast swing.

- As has been reported here previously, Bonneville is preparing to drop its largely automated country format on WXTR-AM (820) in Braddock Heights/Fredrick, Md., and in December is expecting to begin simulcasting all-news WTOP (1500 AM, 107.7 FM). On the air, WTOP has been plugging "WTOP RADIO", and, for now at least, dropping "WTOP NEWS" in reporter signoffs. There is also a new flight of television commercials in which WTOP RADIO is emphasized. The 820 simulcast is expected to help fill the northern "null" experienced by 1500, which has a highly directional signal to protect, if memory serves me right, KSTP in Minneapolis. This continues Bonneville's strategy of using "rimshot" signals to fill in coverage areas at least here in D.C.; they added stations in Warrenton, Va. to cover western Northern Virginia for WTOP, and CHR "Z-104" is actually a pair of 'rimshots' (104.1 in Waldorf, Md. and 103.9 in Fredrick, Md.)

Also, reported in the Post, WTOP is planning to drop its play-by-play coverage of the Baltimore Orioles, and will finally get to be an 'all-news' radio station. Officials had cited increasing numbers of listeners, all of whom are in their cars later and later in the evening, frustrated at not being able to hear traffic and weather reports on the station because of the play by play coverage. In spite of remaining highly profitable, listenership for the Orioles has reportedly lagged over the past several seasons as the team's fortunes have suffered under current ownership. Also, this season, the station has been brokering time on other D.C. stations like Christian WABS-AM (780) and WGAY-AM (1260) to run afternoon and day Orioles games during the weekdays, so WTOP could stick to news during afternoon drive. As

to who will end up with the Orioles, speculation is that they will end up on sports-talker WTEM-AM (980), which has long languished in the ratings because they had no local baseball play-by-play. The Orioles, of course, are confirming nothing at this point.

---- comment mode on ------

I can relate to Mark Roberts hitting the nail on the head concerning the lack of new topics here on our beloved Airwaves. Aside from the flame wars over LPFM, and folks bemoaning the emasculation of former powerful clear channel (as opposed to CLEAR CHANNEL <g>) AM stations that have seen their transmission power reduced for whatever reason, the only thing we ever seem to have to report here these days have more to do with who owns what, and who is acquiring what, and less and less about programming, which to me is more interesting to discuss. Someone asked me not long ago why I stopped posting D.C. Radio Watch to this group, and that's why. For example, its been a long time since I've seen anything meaningful about radio news and public affairs on this list (and no, I don't consider Talk or so-called "Hot Talk" as public affairs). In the interest of fairness, I think much the same can be said of my other favorite radio-biz news source these days, "allaccess.com", which has easily outstripped R&R as a fast and reliable source of news about our business. Having said that, most of "allaccess" these days seems to be about what GM/PD/GSM has lost their job in the wake of Clear Channel absorbing AMFM. Both "Airwaves" and 'allaccess' have become rather sad mirrors of how money, which used to be an important part of the radio business, has become the *only* concern of the radio business. <stepping gingerly off the soap box>

---- comment mode off ---

As always, my comments here reflect my own opinions, and no one else's, including my employer. Anyone who doesn't understand that basic idea doesn't get it, and never will.

Max;

It is all about the money. Try as we might the Herb Tarlecks of the world finally won out. Look at just about any good university level communications school in the country and see how many people graduating really want to get into radio (its a frightening figure down around 5%!!). The truth is that a goodly number of us who still love this medium and what it used to be/might still be someday capable of are out of our 20s and being squeezed by reality into doing something else for a living. Once that happens, for most, the fire goes out and they disappear from places like this site. I used to love flipping across the dial listening to stations in far away cities just to hear what they were doing differently to please a different audience. KDKA, KMOX, WBZ, WBT, CKLW, WOWO, WLS were all a reflection of their town and their time. It was worth the aggravation/challenge to try and find them out there in the void.
Forget that today. Short of finding those responsible for the Communications Act rewrite, throwing them in the Potomac along with their work things just aren't going to change. As long as that's the case this is still going to be nothing but a business and nobody that matters is going to care about much other than who the GM/GSM is.

(This concludes another semi-rant from someone who still cares. The preceding views are his and his alone and do no reflect the views of staff, management, shareholders, or any other living animal, mineral or vegetable.)

Yes, he would often subtly redirect a shopworn thread by asking a question about the potential impact of some new technology, court ruling, or change of direction at the FCC.

He cared deeply about keeping this newsgroup current, keeping the discussions civil, and the approach fresh. When these old topics come up, I miss Bill even more, because I knew there was a good chance one of these old war horses would give me a new fact or perspective that I had missed.

We talked about digital delivery of audio-only services years ago on here. Its too bad he isn't around to see their implementation over the next few months.

A great inexpensive traffic software is "Natural Log". You can go to
www.bsiusa.com and find a link to natural log. It sells for $999.00 and
Larry is a great guy who gives very great software support. You get software
support from the guy that wrote the software...who else offers
that...hehehehe. And natural log works with ALL computer automation
systems....and I do mean ALL of them. The guy is awesome!! I used it at a
station I managed and consulted another group to buy it and they love it.

Hi all. Over the years, I've lost several things from my collection and was wondering if there might be sites pertaining to these. Is there any Dick and Burt material available?? That is, Chicken Man, the Tooth Fairy, along with the old promotional material?? I was always wondering years back if these things could be obtained from Chicago Radio Syndicate, of course with the proviso that you wouldn't use them for anything odd. Also, back in like '85, I had a vinyl copy of an album called "Puffy Sleeves", which was the complete series of Dick and Burt Time Magazine classics commercials from around '76 or thereabouts. I'd love to find that again. Audio file formats would be neat for those as well.

On another note, I'm curious to find out info on the satirical spots that I still hear floating around, "ask doctor science". Are these still being produced?? And where do they come from?? I hear current references to things, (I think), so was wondering who's behind those. I remember hearing a xmas greeting from doctor science back in '84 or so, of course referring to "and a masters degree in every stocking". I know we can get him on the Commandaudio service, (a truly outstanding product), especially in terms of accessability for blind users, so thus my wondering where doctor science comes from. Thanks much...

There's a Chicken Man Shoutcast channel. Go to www.shoutcast.com and
do a keyword search; if you can't find it there, let me know, and
I'll dig up the URL.

We're heading that way, but not there yet ... although years infront of
the Americans.

Besides, even when everyone does switch to digital, you're still going to
need you existing AM and FM for years until the public switches along as well.

CBS-FM in New York City has a jingle from their "Do It Again" package that sings "Cousin Brucie...plays your favorite Oldies...on CBS-FM". I believe it's sung for all the jocks at the station.

I know many other stations are also running portions of the "Do It Again" package. I'm wondering what other alternate lyrics besides "...plays your favorite oldies" you might have heard attached to that particular jingle.

Thanks
Mark

>Look at just about any good university level communications school in the country and see
>how many people graduating really want to get into radio (its a frightening figure down
>around 5%!!).

It also hasn't helped when college radio stations seem to have gone away from their original purpose of training young broadcasters to be either professional NPR members or promoters of "alternative" music. Granted, some of the kids working as jocks now may get jobs on modern rock stations, but it seems like a lot of the people who work on college radio nowadays are more interested in working in the music industry than they are the broadcasting industry. And that's a shame.

4393. MI2N ANOUNCES R2N, DAILY SOURCE FOR NEWS ON RADIO & THE NET

Newsgroup: rec.radio.broadcasting
Date: 2000-10-05 00:00:00 UTC
From: sounni@taggin.com
Message-ID: <8riod1$o16$1@nnrp1.deja.com>
Source record: 17159

For Immediate Release

MI2N ANOUNCES R2N, DAILY SOURCE FOR NEWS ON RADIO & THE NET

New York, NY - Oct. 2, 2000 - Mi2N, a leading news publisher and CSP (Content Service Provider) in the digital entertainment market, announced that it would be launching R2N (Radio Net News), a newsletter dedicated to the convergence of radio and Net. The free daily email newsletter will provide the latest news headlines on the radio industry, with a focus on the evolution of webcasting. The full news releases will be viewable on the Mi2N site.

"This started back with the last site redesign late this fall when we added radio as a news category," said Eric de Fontenay, Editor in Chief of Mi2N. "At the time, the decision held some risk in regards to obtaining that critical mass of content to make the news category well rounded. Although we had been featuring relevant radio news in the newswire, we didn't have any resources dedicated to that particular sector."

"But the growing maturity of the streaming sector, combined with the emerging revenue generating technology, has really energized the online radio industry and created a real need for a reliable news source on the industry. We just happened to be ideally placed to take advantage of it."

R2N will join Mi2N's three other newsletters:

o B2N, Business Net News, covering industry & technology news impacting the new digital entertainment industry.

o i2N, Indie Net News, a source for the latest news on the indie market and artists in general.

o Y2N, Your Net News, Mi2N's top 20 music releases as determined by our readers.

"R2N will fill a gap we had in our offering," said Eric. "As our users are professionals and executives in the digital entertainment sector, we became increasingly conscience of the need to address the streaming market in order to be relevant to their decision making process. Conversely, we believe it will introduce Mi2N to a whole new audience of people that are genuinely excited about the technology and sector."

R2N is slated for launch on Monday, October 9. Subscriptions are being accepted at http://www.mi2n.com/subscribe.php3 or by sending an email to r2n@mi2n.com. Radio related news releases can be submitted for

consideration online at http://www.mi2n.com/input.php3 or emailed to editor@mi2n.com.

About Mi2N
Mi2N (www.mi2n.com) is a leading news publisher and CSP (Content Service Provider) in the digital entertainment market. Over the past two years, its has established a reputation as a major news aggregator and provider with over 1,400 news releases and announcements each month from the major and independent players in the industry.
Mi2N is part of a network of innovative music sites published by Tag It, a New Media firm founded in 1997, and consist of MusicDish (www.musicdish.com), an industry trade e-Journal, 'LA'Ritmo.com (www.laritmo.com), a Latin music magazine, and Black Hole (www.yourblackhole.com), an urban music & culture site.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

There is no doubt that people are getting tired of Rush Limbaugh. He gave am radio a great boost when he initially came on but even his avid supporters today only give him half an ear. Listeners are getting tired of him telling how wonderful he is. Dr. Lara is still strong, especially among women.

EBS has been replaced by the EAS system. You can download the
EAS Handbook from the FCC website.

So, uh which station are you associated with, which has higher ad rates than
WOR? If it's a dinosaur, it's a functional one, and I say this as someone who
despises one portion of the WOR broadcast day. As far as I can tell, it
attracts listeners and advertisers willing to pay to reach those listeners, and
there aren't many stations which can or do charge more.

Updated Jul 17, 2000

Subject: Southern California Radio and TV Page

You can visit my Southern California Radio and TV Page at...
http://www.geocities.com/TelevisionCity/Station/2700/indexrad.htm

or

http://www.davesfunstuff.com/radio

Now with links to related news sites, as well as links to 13 messageboards!
I'm also accepting news bits to post in my Radio/TV news section.

Radio Station Logos section!

List of HDTV stations, plus a list of stations broadcasting in Spanish for
all of Southern California and Northern Baja.

Links to all the local area radio and TV stations that I know of, and noted
which ones are in Real Audio

DX catches in the So. Cal area plus all the DX stations in North Americal.

Frequency lists of the TV and cable sounds for those with scanners and
pocket VHF radios.

Expanded local AM and FM radio talk show listings. Formerly restricted to
morning drive shows, but this comes in handy since shows keep getting shuffled
around and times switch. Always accepting updates to the program guide.

The addition of four pages from the FCC database, reeditied into the local
AM, local FM, local TV and nighttime AM DX-ing radio stations. I wrote a
QBASIC program to compile the huge tables, but I changed no fact from the
databases, as they contain errors, especially with the Mexican stations and
owners. I should be updating this soon.
I still have my own four pages of AM, FM, TV and DX pages I composed with
formats and updated and corrected calls that I came across.

Some recent radio news of note on the front page.

good luck

david tanny

davidtan @ cts.com

Support good music. Quit buying the bad songs!
Listen to DFSX Comedy Radio: Paste http://166.90.143.141:8572/ into WINAMP Open dialog!

Al-Team #80 (alt.music.weird-al) http://www.davesfunstuff.com/ for South Park, Radio/TV, Dr. Demento, Today in History, Funny Stuff, "Weird Al" Yankovic, Icons, Eight is Enough, TV Guide Parody, Celebrity Birthdays, etc.
If Susan Lucci can win an Emmy, anything is possible!

John Kluge will give the Library of Congress $60 million today (Oct 5, 2000).
http://www.washingtonpost.com/wp-dyn/articles/A12676-2000Oct4.html

The article says Kluge bought WGAY 1050 in 1946, but my recollection is that he was a cofounder. He later ran Metromedia.

From: wstandley <wstandley@msn.com>
Message-ID: <0015650181305a0CPIMSSMTPE01@msn.com>
Source record: 17345

I am trying to compile a list of the top ISP's who specialize in streaming media for broadcasters... Examples so far include...

- BroadcastAmerica.com
- Yahoo Radio (previously broadcast.com)
- Activate.com

But I understand there are plenty more. My job is to find those who are seriously in the business of streaming internet radio and have _plenty_ of bandwidth and bandwidth overhead to provide for big spikes in listening for special events.

Please contribute to the list.

Thanks

4407. FCC shuts down Austin pirate

Newsgroup: rec.radio.broadcasting
Date: 2000-10-05 00:00:00 UTC
From: familiacantu@cs.com
Message-ID: <20001005095819.00922.00000346@ng-fx1.news.cs.com>
Source record: 17346

The station called itself Radio One and operated on 94.3 from a shed behind a house in North Austin. The FCC raided it Wednesday, cut the cable to it's 40-foot tower and confiscated the audio equipment. The founder said it was a preemptive strike before next week's Fortune 500 meeting in Austin. The station has aired commentaries critical of big business. Another pirate continues to operated in East Austin on 97.1.

Bob;

Believe it or not there are some of us out here who, politcs aside, see clear signs that Rush is
losing the edge that he once had. Yes, he breathed life into the AM band, and yes he's made millions doing what he has done. But radio in the year 2000 is "what have you done for me lately" and frankly there are stations that are surviving, even thriving competing against him.
His audience is flat to down in several larger markets, and I know of at least one major station
that is seriously considering dropping him because they see him now as a drag on revenues. Regardless of format in this business if you get stale you pay the price.

Tim King

Still waiting for them to do something about the pirate situation in Orlando.
At last count, there are at least 7 unlicensed FM broadcasters in the area.

One of these ("LIVE 95") has a substantial signal which covers most of the
metro. In addition, "LIVE 95" regularly airs profanity, obscenity,
anti-police, and anti-white material. Also airs commercial announcements for
it's sponsors. This station has been active for over a year now, yet the FCC
does nothing. Why is this?

It's pretty typical. He doesn't like WOR so it's bad. He carefully
notes the older audience spots (which, incidentally are ABC, Mutual
and Westwood One network spots airing on all stations on those
networks). They're not local clients. He ignores the banks, high end
car dealers, restaurants and advertisers that appeal to all adult
demos. Actually, we even have had WebTV as a client.

I'm happy to say WOR is a very profitable operation with a network of
about 400 stations that seem to like the programming.

Mark;

100% true. We had a decent one at Penn State in the late 70s-early 80s but even back then there
were people trying to shove NPR down our throats. We fought back and were successful largely
because we had a ton of people on staff and all of them made noise. Eventually they wore down the
student broadcasters, succeeded in handing the frequency to NPR and taking almost two years to
getting around to giving the students back an open air frequency. Even then they gave the kids the
shaft in terms of equipment and building. The NPR folks have asked me for a contribution on several
occasions. It will be a cold day in hell.

We did everything back then, every format you could imagine, news. live sports, you name it we did
it. Yeah we stunk, but a few of us made enough mistakes to figure out enough to carve out a living
behind a mike. I often wonder how many others had the raw talent and the will but not the
opportunity. Sad.

Tim King

(Remainder snipped)

I'm sure that it is not used anywhere in Europe. We don't have the
channel bandwidth (+/-4.5kHz max) to make it sufficiently attractive. AM
is not used any longer for 'good quality' listening. Although the idea
was good, I thought that it had pretty well died out in the USA. Even
bad FM is so much better!

Indeed. Today, there are hundreds of radio stations around the world broadcasting in AM Stereo, and millions of AM Stereo radios have been sold. AM Stereo is currently in use on every continent (except Antartica, of course). It is doubtful whether digital radio broadcasting will ever have this much success, unless drastic improvements are made before things are finalized. Most of the world is going for the Eureka-147 system, which uses a separate band for digital broadcasting, but the USA is going for the IBOC DAB system, which allows regular AM and FM stations to put out digital audio. IBOC DAB has many compromises (such as poor audio quality -- worse than that of regular AM Stereo and FM Stereo, and reduced signal coverage) and unless it is dropped in favor of the Eureka-147 system, I predict that digital radio will be a spectacular failure, at least in the USA.

I promote a more conservative approach -- using DSP (Digital Signal Processing) technology on the receiver side, to improve the quality of existing analog AM Stereo and FM Stereo broadcasting. DSP-based receivers are already in mass production, and have been proven to offer many advantages in reception and sound quality, with none of the disadvantages of IBOC DAB digital broadcasting... and the best part is that unlike IBOC DAB and HDTV, it does not make existing analog receivers obsolete. I have no doubt that DSP can also be applied to TV to achieve HDTV-like picture quality (in standard narrow-screen format) without making existing NTSC analog TV sets obsolete.

Radio Bleue in France is broadcasting in AM Stereo, and at least a couple years ago, there were several AM Stereo (I guess you would call it "MW Stereo" there?) stations in Madrid, Spain.

AM Stereo is a world-wide broadcasting format. There are AM Stereo stations in current operation on every continent except Antartica. You can find AM Stereo stations in countries like Australia, Brazil, South Africa, Thailand, Japan, Panama, Mexico, New Zealand, Korea, and even Swaziland!

Other countries may have different regulations regarding frequency response and bandwidth on the AM band, but at least in Japan (which uses the 9 kHz channel spacing system), stations can broadcast audio up to 9 kHz, which results in audio that sounds about as good as that of an inexpensive cassette tape player -- certainly not FM or CD quality, but more than good enough to sound many times better than what most people expect from AM.

For more information on AM Stereo, please visit www.AMStereoRadio.com. It is a non-profit web site designed to spread the word about AM Stereo so that more people around the world can enjoy it.

Again, for sake of discussion, politics aside.....I think Rush has been "coasting" for awhile.

Remember when each show used to have the genuinely funny "Updates"? I remember roaring laughing in the car to some of them....But those took work and some preparation to be good, no?

REmember when he wasn't afraid to take on feminism? homosexuality? Etc? Now he seems to shy away from any subject that might "cause some trouble".

Lately I notice he's been airing less and less phone calls. Whenever I tune in he's just ranting and raving.

And I notice a general lack of humor in the program as well.

The things that attracted me to this man's show (politics aside) are the things he is lacking now.

Again, sounds like he's coasting....very little prepartaion...and also seems to not want to bother with discourse with callers either.

HE seems to be resting on the equity he's built up over the years....how long he can ride on that....time will tell!

(BTW...I wonder how long we can discuss Rush' show without discussing politics....just discussing it for it's industry interest...???)

Last few times I've bothered to tune in, his program is usually about these
three themes:

1. Clinton is bad
2. Quit picking on Big Tobacco
3. Quit picking on Microsoft.

Umm... Very interesting. I didn't know that AM stereo had caught on
anywhere.

Regarding the width of the sidebands, maybe the broadcasters do put out
a bit more than +/- 4.5kHz, but probably not much more. The trouble is,
in Europe the MW band is very crowded, the channel spacing is 9kHz, and
nowhere is very far from anywhere else, especially at night-time (if you
get my meaning). Also, the width of the receiver I.F. filtering usually
chops off the high frequencies, even if they ARE being transmitted. I
don't think that the manufacturers bother much (but I doubt if the
filters are different from anywhere else in the world).

New Zealand was well behind the rest of the world in the introduction of
FM. One of the reasons was that it was so remote that it suffered
relatively little interference from its neighbours. They used to
transmit 'HI-ish FI' AM, with sidebands of some +/- 10kHz. There was
little incentive to go to FM.

I (and, I suspect, most people - especially in cars) can go for weeks
without listening to AM. The major broadcasters cover the whole of the

country with a network of stations, with powers ranging from >50kW ERP (or more) down to <1W. Transmissions usually carry an inaudible station ID (and more), and modern 'RDS' receivers (especially in cars) display the network, and automatically select the best signal. You can drive 1000 miles and never have to retune manually. You can't do that in the USA!

We have had digital radio for a few years now (around 210 - 220MHz). I don't think that it has even started to catch on yet. There is little incentive as the FM service is so good. It's a bit like cable TV. Britain actually had the first 'cabled' TV service (sez I, ducking!) in 1937, but really multi-channel (>6) never really took off until well into the 1980s. The growth of multi-channel satellite TV was one reason. The other was that >99% of the UK was could receive '5 and 9' signals on the 3 (then 4) nationwide terrestial networks (as with FM radio, with ERPs fron 1MW to <1W). We now have terrestial digital TV. One day, they will pull the plug on the analogue (English English!) TV transmitters, but, if it's anything like the close-down of the 405-line TV transmissions, I won't be holding my breath!

However, I digress. Thanks also to those who E-mailed me directly with info on AM stereo.

73,
Ian.

I still expect RDS-tuned car radios to happen someday in the USA as the
megabroadcasters own a larger and larger percentage of the stations, and
most stations merely repeat what comes from a satellite.

>red, what other details about this do you have?...what power were they
>operating on..

They have a website:
http://www.radio1austin.com/

And of course, they don't admit that they were breaking the law. I don't care what they were programming, they're still operating illegally. And how come almost all of the "programmers" (what do the Pacificistas and pirates have against the words "disk jockey," "personality" or "announcer?") are only listed by first name or nickname? Seems to me that if they were legal, they'd have nothing to hide--huh?

It's just another example of why LPFM is not going to work--even though they'd probably be the best candidates to get a license due to their experience (albeit illegal), the pirates are never going to apply on general principles.

Actually, most pirates couldn't apply even if they wanted to, thanks to
the 'character qualifications' written into the rule that just about
expressly forbid previous unlicensed broadcasters from getting involved
in the LPFM service. Funny, selective things, these 'character
qualifications.'

A good point, but still the stage names most jocks take are, with some
exceptions, plausible full names (well, first and last name). Here's the
program schedule of Radio1 Austin that I was referring to:

http://www.radio1austin.com/progs.html

Once again, no plausible full names used--it's all first names or nicknames.
The press release describing the FCC bust also only mentions the
"programmer" by nickname and the guy who lives where the station's
transmitter is located by his first name. The contacts at the end of the
press release are only listed by first name. As I said before, if the
people running this station feel that their station was perfectly legal,
they wouldn't be hiding their identities. Instead, they know damn well that
they're breaking the law and they should be prepared to accept the
consequences rather than blathering about supression of free speech.

I'll bet the Radio1 Austin people didn't apply for an LPFM license.

That sounds somewhat like Venus Flytrap in a WKRP episode -- even though the station was legal, he didn't want to be identified because he was on the lam from the Army.

Now, Mark, I must take exception to this claim. This is why LPFM
WILL work and why true "died in the wool" "pirates" will continue to
be "pirates"! The honest guy want to be legal!
I've now prepared quite a large number of LPFM applications and, out
of them all, I can honestly say, the FCC has a HIGHER percentage of
current station EMPLOYEES who've been "busted" than the percentage of
LPFM applicants.
We (you) are all so "down" on the "big, bad "pirates" but, how many
people do you know who're currently "in the business" that hasn't, at
some time or another, "pranked" with that first phono oscillator? It's
how most of us got our start! The difference in "us" and the modern-
day "pirate"? WE had a local station that actually had human beings in
it and they were willing to give us a job sweeping the floors and
cleaning the restrooms until the maorning man called in sick and we got
his job, by default. That's the ONLY difference!

Because Arbitron is a written survey, it is fairly common for announcers to adopt names that are simpler to remember. People not used to ethnic names have a hard time remembering and writing them. And, long names are hard and clumsy. It's show business.

Interestingly, this happens everywhere. At Spanish language stations in the US, it's not uncommon for announcers to adopt shorter names or adopt names that are more common over ones that sound "strange" or are not readily identifiable as being Hispanic.

The most amusing situations occur when the payroll department goes looking for "Peter Abrahamowicz" when he thinks of himself as "Pedro Alvarez!"

Sometimes the station owns the personality name. On WFRG, in
the years that I listened, the morning man was Matt Herkimer, but
every other host had a frog name, like Pamela Pond, Kermit T.
Frog, Al G. Green, etc. They don't own their own brand, so if
they move to another station, they must establish themselves
under a new name, and their reputations and fees don't grow.

Nothing wrong with the term "programmer". It means the
person behind the mike has developed or chosen the content,
rather than acted as hired gun voice or jock. When the BBC says
"the news, read by Cynthia Jones", they're being honest in
presenting Cynthia as a voice, not a journalist. Whereas the
US's nasty commercial broadcasters invariably take pains to
misrepresent their Barbies and Kens as hard hitting newspeople.

Hi All,

I viewed the website of this pirate and it "looks " pretty tame.
After reading the previous post about pirates in Miami airing obscenity, race statements, etc AND obtaining advertisers I'd like to know why they aren't somewhere at the top of the list for FCC action ?

Conservatively speaking, breaking the law is equal for all who do so. Yet, how do these folks in Miami get away with it ? (no. I'm not planning to do the same)

please enlighten me

Thanks

A number were busted 2 - 3 years ago. IIRC some were back on the air
almost before the FCC was out of town.

I would guess, but cannot state for sure, that the FCC would contend
that their actions are "content neutral" and they are merely removing
sources of radio interference.

I also have heard that some times the federal government doesn't tell
us the truth.

We have at least 7 "full-time" pirates here in Orlando. Their locations are well known. In most cases, the identities of the operators are well known. In fact, one pirate operator is also a LICENSED AMATEUR RADIO OPERATOR. Yet, the FCC does nothing. Here's the count so far:

TWO pirates are fighting for 92.7. Spanish in Buenaventura Lakes (SE Orlando metro), Creole programming Pine Hills (W. Orlando.)
91.9 Dance music. East Orlando
93.5 Rap/Urban. West Orlando
95.9 "Live 95" Rap, controversial talk, commercial sponsors. Boasts a powerful signal that now covers most of the metro.
97.1 "Survivalist" radio (White supremacy, far-right religion, etc.) Cassleberry (NE Orlando)
97.3 Reggae (whereabouts unknown)

There have also been sporadic pirates on 93.9, 98.5, and 100.7. Basically, anywhere there's an open space seems to be fair game for illegal broadcasters these days.

Perhaps, these terms aren't PC? ;) Though I wouldn't put it past
some people to associate disk jockeys with "tight playlists." Maybe the
word "personality" brings visions of Rush Limbaugh to mind. Perhaps, when
they think of announcers, they think of those people that do the voices on
the Jiffy Lube radio commercials.

I think that you guys might be reading too much into this "first
name only" thing. I was once a volunteer at a licensed university
station. Their training manual strongly recommended that DJs either used
first names only or pseudonyms to protect their own privacy. There were
some rather unstable listeners who had been known to stalk air
personalities. Most of the pseudonyms that people selected did not
include last names.

Orders now are to eliminate all pirate stations in and around Austin before the Fortune 500 Conference opens, hence pirate station "Free Radio Austin's dramatic raid on Tuesday. Between that and the Canadian Tactical Surveillance Team the FBI has situated in downtown Austin, NOBODY had better try to stage a protest there!

Don't those poor slobs know that they'll never get any media coverage for this?

***Friday, Oct 13th - 7:00PM CET (live), Monday, Oct 16th - 10:00AM CET (recorded)

FRIDAY 13th - RADIO PARTY

The trend of Disco evenings in Croatian primary schools is very usual as well as in Nikola Tesla primary school where the party will be organized at Friday 13th October in 7:00PM (CET). The Radio 5+ crew will broadcast the whole event via Internet. It will lasts for 3 hours of excelent choosen (we hope so) popular hits, good DJs and also all of the pupils which will be the audience. Net listeners can make some music wishes via e-mail during the radio-show. We promise a nice fun party. Besides that, this will be the VERY FIRST live radio-show of Radio 5+ so don't be angry to us for some little mistakes :-)

Hi all. In my list of looking-fors last week, I forgot to ask about two others. Does anyone have info on the recent dramas Imagination Theater? The vibe I get is that this is no longer around, but I think I had heard of ways to get copies of them via c d or some subscription. Do they have a site, or is there a current company?? I believe I have written down something about Transmedia, whoever they are in San Francisco, but have been unable to trace further. Also, am curious to know if there is a source for recordings of the old cbs mystery theater, and general Mills Adventure Theater. I have several Mystery and Sears Theater, but I ***know I remember hearing many more episodes that I've yet to come across. Thanks...

"Imagination Theatre" still exists as a syndicated radio program. I don't know if there is a national list of stations that carry it, but I do know of one station that does: WCTC 1450 AM Stereo in New Brunswick, NJ, which carries Imagination Theatre every Saturday night, in Stereo where available. See http://www.wctcam.com/ to listen to WCTC's web-cast if there are no local stations in your area that carry Imagination Theatre.

The first satellite has been successfully launched from Kazikstan that
will be part of three birds that will deliver digital radio directly
to listeners.

David Eduardo, a regular poster around here, is involved with the
programming of some of these channels so I am going to hope he'll jump
in here and provide a treatise on this technology.

IIRC, service is scheduled to begin in the first quarter of 2001, and
I will be one of the early subscribers to this service.

I believe that Sirius has now got three birds in orbit. They are in the
process of testing them and optimizing the orbits. If I understand
correctly, the Sirius birds are not in geostationary orbits, but rather make
synchronized passes over the US. THis is described somewhere on the Sirius
website: http://www.cdradio.com/detect_flash/index_flash.htm but since I'm
no rocket scientist, I'll just post the URL instead of trying to explain it.
>

XM is using geostationary satellites to be lalunced from an equatorial
position from a floating platform by Boeing-Huges joint venture SeaLaunch.
When in orbit, the two satellites, Rock and Roll (cute, huh?) will be
supplemented by over a thousand ground fill transmitter that will take care
of shadow area in urban cities caused by mostly manmade structures. Most of
the automakers, big and small, will offer receivers withthe satallite bands
starting in early 2001. The services are 100 channels each, and like cable
TV in that there is a fee. There will be plenty of formats that could not be
vialble locally on terrestrial radio but that should have national
partisans, like Reggae, various jazz forms, 50's oldies, etc. Channels will
be commercial free or very limited commercial carriers.

ABC has several program products that appeal primarily to the African American audience. They are the Doug Banks and the Tom Joyner shows, and the 24/7 satellite nets called Rejoice, Classic R&B and Touch. ABC is combining the sales of these products in a package. As syndicated programs and programming, ABC retains a percentage of the commercial inventory as part of their compensation from the stations that broadcast the programs or programming. They will offer all 5 products in a package to national advertisers The network already exists in separate parts; on January 1, they will begin selling it as a single package.

Did you hear the segment? Probably not. Since masturbation has been a pastime of even the best of families for as long as life has existed I'm willing to let an audience face those facts. Ever wonder why your arms are just long enough? The Joan Rivers comment about "eating s**t on a bun" isn't a regular pastime of listeners and violates FCC language rules very clearly. No double standard that I can see.

>Ray Taliaferro on KGO mentions Clinton's "blow jobs" all the time.

I really wonder why we believe that terms we use ourselves (think about it) and regularly hear on the street are forbidden on the air. That's where the double standard lies. Please don't respond with "we have to protect our children" because their world at school includes far more graphic language than most adults would use.

>Gene Burns, also on KGO, uses the "correct" term, "fellatio", in the same
>context.

Gene is a master with words. He's know for baiting callers with words. That would make him a master baiter. My favorite is his "testicular fortitude." However, I have to warn you that Gene has also used the word penis on the air in other than a clinical form.

It's extra-linguistic.

Some words are used to frame the conversation as vulgar,
apart from their references. Doing this assumes rights
with respect to the listener that the listener, socially,
has a right to refuse. This is refusing the frame, not the reference.

The idea is to keep the dial free from things that you have
an ordinary social right to refuse.

That is, it's based on a convention that is still alive in
social interactions.

Were there no such words, they would be invented. Both the
vulgar frame and its refusal are useful.

4470. Freedom of Speech (was WOR Double Standard)

Newsgroup: rec.radio.broadcasting
Date: 2000-10-14 00:00:00 UTC
From: Doug Joubert <DougJoubert@telocity.com>
Message-ID: <000e01c035d9$a8369a60$750cc040@telocity.com>
Source record: 17127

So my question to the forum is this:

If I may, I would like to continue this thread in a slightly different direction. When broadcasting, where does that freedom of speech end?

It all goes back to stewardship. In my humble opinion, we are STILL stewards of the public airwaves. We have the responsibility to protect the airwaves for those who are listening and watching what we put on the air. How far we go toward that protection is where this gets a little hairy.

I've always been taught (and continue to teach it, since I am also an elementary school teacher) that your freedom ends when it infringes upon another's; the old "can't yell 'fire' in a crowded theatre" story.

Has OUR right to freedom of speech ended because of using foul language? There are some things that our culture deems wrong. Have we allowed foul language to become something that is NOT to be considered incorrect in a social setting?

Just throwing out an old bone for us to chew on awhile.

I don't know that we have freedom of speech on the "public" airwaves.
The courts decided in KFKB vs. FRC and later in the NBC decision in
1945 (can't pull the cite off the top of my head) that the government
had a legitimate interest in regulating broadcasting, and those
regulations could include content-based regulation.

True, but the courts have also ruled that there *are* First Amendment protections for broadcasters, even though they are not as broad as for other speakers in society.

Ed Ellers wrote:
>

> Think about this for a minute -- do we really want broadcasting to be a
> medium that parents are reluctant to let their children use?

No, I wouldn't want to see broadcasting go that way.

However, how does the broadcaster feel?

Hmmm. He has the local rights to a nationally-syndicated shock jock.
Mr. and Mrs. Mid-America will listen in - and laugh along with it, but
Mr. and Mrs. Mid-America would never want their children listening in.

In the meantime, Junior decides to listen in on his walkman upstairs
because it's the "forbidden fruit", or because he wants to see what all
the fuss is about.

So is the broadcast outlet owner happy or isn't he? Or does he even
care? Sure, this is an instance in which the parents don't want their
kid listening, but is that a concern of the broadcaster if Mom and Dad
AND the kid are listening in?

Yes, from other kids. Parents can explain that such language is not acceptable even though "all the other guys" are using it. It's a lot harder to get this point across if/when said "bad" language is being used on radio and TV, in general-interest publications, etc. (Or, for that matter, by the kids' teachers!)

Think about this for a minute -- do we really want broadcasting to be a medium that parents are reluctant to let their children use?

Ditto WOGL in Philly, or at least they were the last time I heard them, as part of an interesting jingle mis-mash consisting of a lot of old PAMS re-sings (for some odd reason, "Philadelphia Story" figures prominently...wonder why hehe) and this package...jingles are the best part of that particular station, at least to these ears, as I find the rest of it boring and homogenized.....

>I've always been taught (and continue to teach it, since I am also an
>elementary school teacher) that your freedom ends when it infringes upon
>another's; the old "can't yell 'fire' in a crowded theatre" story.

It's a great concept but horribly difficult to apply to mass media. No
matter what you say it's going to "infringe" on someone else's desire
not to hear it. You can't yell fire because it causes people to panic
and trample one another to escape. There's no such risk in the use of
specific words on radio or TV.

The closest I can imagine would have been War of the Worlds where
fiction was taken as fact by people who missed the disclaimers.

Every time a political liberal utters a word he "infringes" on the
right of a conservative not to be upset by uncomfortable ideas. The
same is true for liberals being subjected to conservative politics.

If we eliminate everything that upsets someone we'll have nothing to
program.

I like Cool Edit Pro as well.
I've done spots to 90 minute educational tapes with it.

By the way if you go to the "About" under "Help" in Cool Edit Pro and drag the center of the flower to the beginning of the sound cone, you get the old tennis game of Pong, programmed to be played against employees at Syntrillium.
And.. it's in stereo, go figure.

What ever happened to taste? What ever happened to those days when an announcer would be caught off guard by an open mike and say something embarrassing and have to apologize on the air? Radio has become nothing more than trash talk. Could the fact that revenues for the big mega-mergers are substantially down be a reason? Perhaps the biggest fear of owners is being realized. The audience is becoming more selective.

Larry;

It also used to be expected that gentlemen wore hats, white shirts and dark ties to work every day without fail. Those same men drove 4500 pound American built land yachts with 6 yards of chrome on them. Their wives mostly stayed home because that's what they were "supposed" to do.

The world changed Larry. Tastes changed. No matter how hard you try you can't put that genie back in the bottle.

Revenues for the media corporation that you seem to be speaking of are not "substantially" down. Stock prices are down from the unsupportable levels of earlier this year because the economy has slowed down. Most every one of the big guys are going to make money this year, just not as much as projected at the beginning of the year. Money and taste have nothing to do with each other in this case.

If what you hear offends you, then change the station. In this day and age of 200 channel satellite TV, radio, Internet and soon satellite radio there has to be something out there that fits your tastes.

Tim King

I know...I freaked the hell out of a Syntrillium spokesperson at the 1999 NAMM Show in Nashville with that one =). I think it boosted sales...several people came over to the booth to watch me play (and ask about the program)! Gotta love Easter eggs...

But anyway ;)

Sorry, "Trash Talk" as you call it came about during some of the most profitable years in radio. You're stretching this to find some way to blame consolidation for what you don't like. That's a very tired argument.

How do you know the audience is becoming more selective? Please provide some Arbitron trends that you can directly relate to a change in audience taste.

Also, please provide a source for your revenue claims. We're having one of the best years in our history.

We'll have proof that audiences are becoming more selective when they stop filling out diaries with shock jock names in them.

Commercial voice overs... no spot is too small... add a full time voice to your lineup without forking out another full time salary!

BIG VOICE for itty bitty Canadian dollars! Our turn around time is less than 6 hours!!!! All work is sent by MP3.

I've done voice overs for the NHL, Sears, Coca Cola, McDonald's, Sony Music, Universal Concerts, General Motors, DuMaurier Concerts, Bell Canada, Royal Airlines, AMC Theatres, Nintendo (N64) and more!

If you're looking for a new imaging voice, try us! Unbeatable rates, unbelievable sound. Now the little guy can sound like the bigs without the BIG price tag!

See us on-line @ http://www.milkmanunlimited.com/voice.htm or download our latest imaging spot now @ http://www.milkmanunlimited.com/moviepromo.mp3

We also have a ton of prep, Canadian job listings and more!

4499. Arbitron's Faux "Results" (was Freedom of Speech)

Newsgroup: rec.radio.broadcasting
Date: 2000-10-18 00:00:00 UTC

"How do you know the audience is becoming more selective? Please
provide some Arbitron trends that you can directly relate to a change
in audience taste.....We'll have proof that audiences are becoming more
selective when they
stop filling out diaries with shock jock names in them."

This is not meant to argue Arbitron's usage for statistical purposes, Rich. It's to argue Arbitron's validity.

I probably don't have the years in the business that some people do (since 1974). And I don't have the major market experience (biggest market: New Orleans). But my perspective on Arbitron is simple: it's a joke. To sample a small amount of people and say that is the "market trend" is a lie.

I know I want "pie in the sky," but I just wish there was a better system for TRULY finding out who is listening and what they're listening to. I also know there have been other attempts at doing that in radio, with all of them failing. Again: why can't there be a system that FAIRLY polls the listeners? There's GOT to be a better way!

Any ideas?

I'm not sure why the Arbitron method (mathematical projection) is
unfair. It may not be perfectly accurate, but fairness would imply
some intentional manipulation of data to harm someone.

Internet newsgroups are wonderful places to make statements
unsupported by data. You can claim that revenues are down (they're
not) and that audience tastes are changing towards your personal taste
(they're not) and not supply any data. We're supposed to accept it on
face value even though our experience and balance sheets show both not
to be true.

Again, Arbitron is the only accepted standard of measure in our
industry. As soon as the ratings begin to show that shock jocks are
going out of style I'll believe it may be happening. As ong as the
numbers stay up, I have no real choice but to beieve audiences enjoy
shock jocks.

If I ride a New York City bus in the morning and see all the pubescent
males with headphones drooling and looking at their crotches I know
who they're listening to. My observations support Arbitron's.

Absolutely. Perhaps the most ignored facet of Arbitron or any audience
measurement service is that its main purpose is to support advertising
sales. If a ratings service is useful to advertisers, radio stations will
support it. Arbitron has virtually 100% acceptance by ad agency buyers and
retail accounts that employ quantitative analysis to ad buys. If P&G, GM and
all the major marketers, brands and products believe that Arbitron is a
useful and reasonably accurate tool, it will be supported and considered "as
accurate as possible within the confines of cost and sample size."

That's all there is to it.

What is inherently "unfair" about a random probability sample? The idea is to select a statistically valid sample of a percentage of the population and project their behaviour into the universe. Arguments can be made that there is no such thing as a truly random sample, but, within the definitions of statistical randomity, the Arbitron methodology is based on sound research techniques. In fact, Arbitron tries to achieve a true random and representative sample by controlling geography, age and ethnicity among other things so that here will not be over or under representation of specific groups.

Sample size is strictly a cost decision. To achieve a significant increase in reliability, it is necessary to increase samples exponentially. Stations, which pay 95% of the survey cost, are not going to do this. In fact, several markets have not implemented Arbitron's desired sample increases of the last few years because the local stations did not want to pay the additional costs involved.

What we have is a system that works most of the time and has a good degree of advertiser acceptance at a cost that radio stations can justify.

And then we have the Personal People Meter, a whole new discussion.

>some intentional manipulation of data to harm someone.

Its grossly inaccurate in what stations attempt to do with it. The
sample sizes on which some of the pullouts are based get down to the
difference between one listener and no listeners.

Its unfair because whole hordes of people who ought to know better
have sold radio time, and radio itself based on data they knew had
sample errors larger than the results themselves.

These airwaves used to be the public's. America's "business model" for
radio, which evolved in the 1930s was a great marriage that mass
appeal made the consumers pay for the equipment to utilize
the "ether" through selling little pieces of the end product away to
mass marketers.

Today, there are far fewer mass appeal products and far more niches,
and there are far too many radio stations going after 25-34 women to
get those good supermarket dollars.

Arbitron isn't unfair in itself, but looking at something that has
always been described as merely a research tool for advertisers, can't
honestly be viewed as if it's a standalone product.

The system isn't manipulating the data to harm someone, it's
manipulating it to help a whole industry, the fact that the public or
portions of it might be harmed in the process is an unintentional
consequence.

> We are living in the age of (almost) solid cellular (phone) coverage
>and the $10 cell phone is now a reality... Why not add a simple
>"cellular data gatherer" transmitter to ACCURATELY report listening?
>(Now, it's up to someone else to pick up on this idea and implement
>it...)

Just because a technology is cheap does not mean analyzing the data it produces will be cheap. If you consider all the web sites that report data, they can log every packet that comes to the machine, but they can't get information like how old the listener is, or what size family they belong to, unless the listener is willing to supply that information. And even those sites that do get that data incur large costs in processing it that are not always justified. The cost of processing the data can exceed the value of the data to the web site.

You are also assuming that such devices will accurately report listening. They may report that a radio is on, but not that anyone is listening. Or they may fail (e.g. if the user forgets to charge the batteries). They also may not work for some kinds of radios (e.g. old radios). I could go on ... you get the idea.

In other words, inaccurate.

>>You are also assuming that such devices will accurately report
>>listening. They may report that a radio is on, but not that anyone is
>>listening.
> Great for sales? I know of stations who'd LOVE this little "quirk"!

Advertisers care that someone has bothered to listen to the ad and buy the
product or service advertised. Thus, radio stations will need to care about
this as well.

>>Or they may fail (e.g. if the user forgets to charge the
>>batteries).
> It would work anytime the radio worked as long as the device was
>powered by the same power supply as the radio.

This means the cost of radios will go up. I can get a radio today for as
cheap as $10 and power it with AA batteries that cost $2 and last me a few
months. Who is going to spend all of that extra money?

Also, how are we to be sure that the radio will transmit its results back
to the monitoring center in time for them to be included in the latest
report? For that matter, how will we ensure that it will ever do this?

> Even if it only worked with radios recently sold, within a
>reasonably small amount of time, there would be enough of the new
>devices on the street to dwarf arbitron's sample.

Assuming that people buy such radios. After all, they will cost more, and
they will be more of a bother to operate.

>And, even better, the new method wouldn't depend up waiting until the
>day is over to rush in and log what stations you listened to and how
>long you listened to each while being as accurate as
>possible...

On the other hand, it does depend on the radio having connectivity
with listener data receiving stations. If it is not, what happens?
Does it just drop what it picked up that day? Should it retain
multiple days of listener data? How much more will it cost to do
this, and are consumers going to want to pay?

I haven't even gone into the details of how the monitoring centers are going to handle all of this data, how they will audit it, how they will ensure its timely processing, how they will defend against spoofing or other security problems, etc.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

Why would a radio manufacturer want to put something like that in every radio? When you walk into Walgreen's or Radio Shack or the GM dealership, is it in the radio manufacturer's interest to do this? He doesn't care if you listen to gospel, rap, jazz, religious programming, whatever...

And I don't know if I'm really hot on having someone log everything I listen to and when. If I'm asked to be part of the Arbitron sample, I can decline or accept. My choice. But I may not want my listening choices logged.

On the Internet, it's one thing - but the airwaves are public property and I honestly don't think the American public wants to be profiled based on their listening habits.

Check out the Arbitron site and read about the Personal People Meter which
will "listen" at intervals to what the person with the meter (about the size
of a pager) is listening to and extract a code sequence that will identify
the radio, TV, satellite or internet station and download the data daily for
the ratings. It's here, and actually in tests in England and soon in a small
area in Philadelphia.

4510. Arbitron's Intellectual Property

Newsgroup: rec.radio.broadcasting
Date: 2000-10-18 00:00:00 UTC
From: David Tanny <davidtan@cts.com>
Message-ID: <mkqsuskk5on308okippj8i8eekdt02d9mn@4ax.com>
Source record: 17016

Hello:

I run Dave's Radio Waves full of radio news. Check it out at
http://www.davesfunstuff.com/indexdfs.htm

I recently received an e-mail from a radio personality in San Diego (I don't
wish to give it out publically) who works at a local station. Here's what this
person sent me...
"[name of radio station] came in first place at the top of the Arbitron
ratings crop, 25-54" and
"[name of radio station's morning show program] came in #1 in the 12+
demographic".

I understand Arbitron's policy on unauthorized redistribution of the actual
ratings, but is there any prohibition on reporting these facts (replacing the
name of radio station wording with the call letters of the station) on a
website not authorized to redistribute Arbitron's ratings or facts from their
reports such as these?

sincerely,

David Tanny
Support good music. Quit buying the bad songs!

>And then we have the Personal People Meter, a whole new discussion.

I've seen it. It's fascinating. However, it requires every station to
install an encoder. If one station in a market refuses, there can be
no shares because the total universe isn't represented.

If a traditionally low-rated station refuses to participate it can
cause the rest to lose a very important measure and, possibly cause
confusion to its benefit. It's like Arbitron's Internet surveys. Since
everyone doesn't participate, the results are not representative of
the whole universe, but only those participating. You have to add the
qualification "of those stations surveyed" to any claim that you're
#1. Yahoo Broadcast has some of the largest stations online. They
don't participate in the survey, so a significant segment of
webcasting isn't included. That's why KPIG can be #1 (of the stations
surveyed). If everyone were included KPIG would be very far down the
list in audience figures.

I still ask the question about how they can determine unique users. If
most of the Internet listeners are accessing the net via AOL and AOL
uses dynamic IP addressing (the address gets reused each time one user
logs off) how can you tell when a new user logs on? I'm assuming that
one IP address is considered a unique user. The next user with that
address will be ignored because the address is already considered
unique, thereby tremendously undercounting the number of actual unique
users.

The current survey system doesn't require much participation from the
stations being surveyed and it includes every station in the market.
Without everyone being surveyed stations will never again be able to
claim, absolutely, "we're #1."

Since this technology will be expected to deliver more detailed
information, how do you know how many people will invite even more
data collection on themselves?

How many of us have bogus email addresses we use when there's a risk
of spam resulting from filling out a form online? How many of us have
one email account that we never check that we use as a dumping ground
for spam? How many of us use phony names when filling out online forms
that guarantee us privacy but share the data, anyway?

How many of us trust "privacy policies" on web sites? How many of us
believe the data collectors aren't trying to attach our names to
surfing activities? Doubleclick got caught. How many others haven't
been?

I seriously doubt many people will willingly participate in activities
that jeopardize their privacy. After all, once the data is collected,
the company that guaranteed your privacy can be sold and the buyer is
under no obligation to honor the original policy.

I realize it's all being done to enhance my surfing experience, but
I've been on the net for nearly 20 years and am willing to fend for
myself where my personal enhancement is concerned.

>heard that it was "coming" but, had no idea it was "here"...

It's here and it's very slick. The only glitch in the system is that
it requires every station in a market to participate by installing an
encoder.

Without 100% participation, data on the total market isn't complete.
No shares. I can't imagine that every station in every rated market
will buy an encoder and install it in their program line. What happens
when a classical station begins to get calls that listeners "hear"
something strange during a Chopin Nocturne? The first thing to be
blamed will be the encoder.

Arbitron is a little like the IRS. "We're here to help" causes most of
us to clutch our chests.

Unless the data is sourced it's useless. If you source it without the
legal right to do it, you're stealing proprietary information. Any
radio station that prints ARB data and doesn't provide a source on how
they arrived at those "facts" will be ignored by anyone buying time.

Since the figures given require third party calculations (morning show
is #1 among men under 5' 7") you have to crunch the numbers. These are
not figures that Arbitron allows non-subscribers to use.

If you put it on a web site I would expect a cease and desist order
from Arbitron as soon as they find out about it.

What is so pie in the sky? The BBC used to (and may still) send vehicles out in the street to check
for TV sets in illegal use. It wouldn't take too much to go a step beyond that to place transceivers
in new radios that would reveal the identity of the station being listened to when the set was
"interrogated" by a mobile or set scanner. Problem again is the cost involved of wiring every major
market with the technology.

If I read this correctly, you have to wire every RADIO as well. Hmmm.
I have a clock radio in my bedroom, birthdate circa 1989. I have one
in the living room birthdate circa 1991. My car radio is made in
1997. My main stereo is 1995. My other stereo is 1972.

None of them have this wiring.

It seems like it would be nearly impossible to get every radio into this
system, considering the lifespan of some receivers in circulation can be
upwards of 30 years.

Over a decade ago I was one of the metered homes for overnight TV ratings. OK, my home, not me.

The poor fellow appeared at my door one afternoon pleading to allow him to attach his gear to my TV and VCRs. He badly needed someone in my neighborhood for his demographics and the other people had turned him down. I explained to him that I only used the VCR for timer-initiated long-form audio recording from the radio. He finally understood, but the folks in Florida where the data was collected could never understand that use of a VCR. I volunteered to set the VCR to a particular empty channel when doing audio recording, but they certainly couldn't comprehend that.

After about a year there were VCR problems, and I had them remove their gear - they also had my VCR problems repaired.

Their gear figured out what I was viewing by listening to the local oscillators in the VCR and TV.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

Would you buy one, knowing it was transmitting data about you to
anyone within the signal's range?

There's a very interesting Spy Store in New York. I was amazed at the
size of the cameras and the quality. Why not add a camera to the
tranceiver so we can tell if there's actually a body in the room. If I
leave a radio on to keep my cat company I certainly don't want false
rating information to be collected.

I can imagine the market for all those resulting pictures on the
Internet. I realize most are likely to be Joe Six Pack in his Fruit of
the Looms, but there might be an occasional marital consumation we'd
like to watch. That would probably come from the radios tuned to
Smooth Jazz and Lite-FM stations that make good lovemaking
environments. I'm not sure I want to see pictures from Rap stations,
though. It would also make shows like Big Brother much easier to
produce.

How about choosing random houses each week?

I realize we'd be guaranteed that the tranceivers would only be used
to enhance our listening experience and would never, ever be used for
anything else - until someone found them to be a profit center.

Remember: "We're here to help."

4521. ISO: Batwing Antenna Design Information

Newsgroup: rec.radio.broadcasting
Date: 2000-10-20 00:00:00 UTC
From: kd2bd@amsat.org
Message-ID: <8spm4q$6j4$1@nnrp1.deja.com>
Source record: 17029

Hi.

I'm in search of design and construction infomation for a Batwing (Masters Superturnstile) antenna for 70-cm (430 MHz) Amateur Television repeater system use. I've done extensive research, and have concluded that a multi-bay Batwing antenna, with it's nice broad bandwidth, would be ideal for this application. The Alford-Slot antenna we are currently using is providing terrible performance.

I realize that most commercial Batwing antennas are used by Low-VHF television broadcasters, but the design should work quite well in my application simply by scaling the dimensions up to the 430 MHz range.

Most of my questions relate to the proper feeding of each batwing layer, as well as suitable construction techniques. (This antenna will be mounted on a commercial communications tower at 350 feet AGL, and failure is NOT an option.)

I've created a short web page containing some ideas and drawings I've come up with. The URL is as follows:

http://www.njin.net/~magliaco/batwing.html

I'm soliciting comments from anyone would might be able to provide construction and design information details. None of the antenna literature I have come across provides enough PRACTICAL information to formally develop a set of plans for constructing such an antenna.

Any help and/or assistance that can be provided would be greatly appreciated.

Thanks!

John <kd2bd at amsat dot org>

When I lived in England (1980-1983), we were visited by the "TV Police" once. We had just gotten there (day
two) and had paid our TV Tax about 3 hours before their visit. All was well after I showed them my
'license'.

I asked them if I could see what the inside of their van looked like, and was given a 5 pence tour. They
could detect who was watching what from about 100 yards. They were also set up to detect radio frequencies,
but said licenses weren't required for radios anymore. BUT . . . they were also doing work on the illegal
CBers. And there were a LOT of those.

BTW, it was OK to view the Independent channels (advertising supported those) without a license, but to watch
the BBC (two channels) cost about 50 pounds a year for color, much less for B&W. Imagine it's a lot more
now. All TV was/is UHF, and superb picture quality. They were just closing down the last of the VHF
stations.

My 2 pence, er 2 cents,

Bill in Fort Worth

4523. Weak Link?

Newsgroup: rec.radio.broadcasting
Date: 2000-10-20 00:00:00 UTC
From: Paul Van House <pvanhouse@ev1.net>
Message-ID: <39F09F25.6955CB92@ev1.net>
Source record: 17031

(I tried posting in "rec.audio.pro" but got no responses. Is there a better group??)

My computer's sound card is a very small step above "real cheap" (A Creative Ensoniq). However, it does a real good job of making CD's from my vinyl/tape collection using the "line" input and Cool Edit 2000. However, when I try to do voice work, the result is a terribly cheap "tinny" sound using the "mic" input and a quite old Shure Unidyne 5155A microphone that sounds much better when used with a PA system.
I know I have both a low-end audio card and a low-end microphone, but what steps (reasonably priced - I have a 300-500 dollar budget) can I take to improve quality of vocal recordings? Since the "line" section of the audio card seems to be OK, would a microphone pre-amp and a (much) better microphone work, or should I upgrade both the sound card AND microphone -- and what brands/models are good.
My favorite mic from my past life in the radio industry was a Sennheiser, but I can't remember the model number -- all I know is that it had a bass rolloff adjustment that seemed to work really well.

Before you do anything else, go into the Windows Volume Control program and make sure you have an "Advanced" button under the Mic Volume slider (Options - Advanced Controls) and that it has "Microphone Boost" checked. I believe you have a configuration problem, not inadequate equipment; the Creative Ensoniq is an inexpensive card because of a lack of certain special effects and multitasking features; its fidelity is just fine, as you've discovered in your line input experiments.

I'm not familiar with the Shure mic you describe. Is it an XLR connector or a 1/4" phone? Chances are it's an impedence mismatch between the Mic (50-600 ohms) and the soundcard (15,000-20,000 ohms).

> I know I have both a low-end audio card and a low-end microphone,

You could try going to your nearby Radio Shack and buying an adaptor to bring the impedence from the lo-Z to hi-Z. The Mic side of of the adaptor is for an XLR connector and the output side is a 1/4" phone. I imagine that you must have a line adaptor to go to the mini-phone jack on the sound card already.

> My favorite mic from my past life in the radio industry was a

I have a few I can use on mine, in the manner I described above. A Shure SM7, an RCA 77-DX, a Western Electric 63A, and a Western Electric Bird Cage. They all sound good on the computer and my soundcard is a no-name one I inherited with the rest of the 100 mHz boat anchor.

"Boost" is enabled, and helps a bit with quality, but still does not match what I hear when the mic is used with our church's PA system.

I am new here so be nice!!!
I listen to KCFX in kansas city missouri. It is a classic rock station. Does anyone know about how many tracks make up a typical classic rock library?
Also, are these tracks stored on a harddrive now or do thwy still use CDs?
And if they use a harddrive what software do they use to control the station.
Also, how do I get a list of what "classic Rock" consists of in the industry?
Thanks
Cindy!

This really is the end of an era. Bill O'Hara was at WKBV when I
started my career in Richmond (at WHON) in 1965.

It's also amazing that Brewer still owns WHON/WQLK. They bought WHON
in 1966. I was working there then.

Rock-it Radio listeners club - http://www.rockitradio.net

As we draw nearer and nearer to the end of October I thought I would go
way back in the Rock-it Radio archives to show #081 -- The Halloween
Spooktacular show and place it in our archives.
It is currently ready to be heard. It is a mix of some of the spookiest
batch of music we have here at the Rock-it vaults -- We searched around
the block to Ventura's own Eddie Lieper to around the World to the Ukraine
with the band "The Mad Heads" and to Sweden with
some "Wildfire Willie". Here is the playlist of this Haunting Mix.
1. Frankenstein's Den Hollywood Flames
2. Luke the Spook Sheb Wooley
3. Vampire Daddy Jerry Bryan
4. Dinner with Drac Wilson Boris Pickett
5. Frankenstein The Cadillacs
6. Monster Mash Boris Wilson Pickett
7. I'm having a halloween party Eddie Lieper
8. The Billywhack Monster Eddie Lieper
9. Little Blue Man _____
10. Spider in my stew Buster Benton
11. Howlin at the moon Wildfire Willie & Ramblers
12. Witchdoctor's Curse Frantic Flattops
13. The First Mrs. Jones Bill Anderson
14. Black Cat The Mad Heads
15. Purple People Eater Shep Wooley
16. Bo meets the monster Bo Diddley
17. The Monster Rock and Roll Billie & Lillie Ford

Tuning into this show is easy just go to our archives page at
http://www.palmsradio.com/rockittext.htm and scroll down and
click to the "flashback" section and show #081.

Northeast

Replacing Weasel as PD at Urban/WJFX (107.9fm, New Haven) is Phil Becker. Becker arrives from WBCD in Dothan, Alabama, but has had stints in Grand Rapids, Michigan (WSNX/WVTI) and Muskegon, Michigan (WCXT). Weasel becomes APD/MD.

Joining the morning show, alongside PD J.J. Fabini, at Alternative/WEJE (96.3fm, Churubusco) is Scott McGlasson from WTAO in Murphysboro, Illinois. Also joining "Extreme 96.3" is "Moe" who will do afternoons. Moe arrives from Cumulus' WRWK in Toledo, Ohio. (IRW wonders: If Moe had a fanclub, would it be called the "Moe-fo's"?)

A new lineup at Rhythmic/WCKZ (102.3fm, Auburn):

6am - 10am Mike Thomas (formerly nights) and "Nate Dogg" (formerly middays)
10am - 2pm VP-Prog/PD Brian Michel (formerly off-air)
2pm - 6pm "Slammin'" Sammy (formerly weekends)
6pm - 10pm Aaron Bone (formerly weekends)

Morning co-host Jacki Jacobi departs Country/WBTU (93.3, Kendallville).

Limuel Woods (aka "Woody Woods"), last at Urban/WJFX (107.9fm, New Haven) heads to WRVZ in Charleston, West Virginia where he'll be MD & night guy.

Dawn Street continues as PD at WEXI (102.9fm, Huntington), but she'll be leaving her other job at Taylor Broadcasting's WEXI/WXKE (Traffic Manager). Incidentally, IRW has heard several different Legal ID's on the station now.

A note from the TV files: WKJG (Channel 33, Fort Wayne, [NBC]) GM Bob Klingle exits for Belo's WHAS (Channel 11, Louisville, Kentucky [ABC]) where he'll be VP/GM. Klingle served as WKJG VP/GM since 1997. Replacing Klingle at WKJG is John Dawson, who has worked various places, among them as President/GM at WISH-TV in Indianapolis.

Northcentral

Jay Michaels departs mornings at Standards/WHLY (1620am, South Bend).

AC/WRSW-AM & FM (1480am, 107.3fm; both Warsaw) will end their simulcast this month. The FM will continue its AC format while the AM will begin a sports format, airing ESPN Radio.

Tom Bugg is the new GSM at News-Talk/WTRC (1340am, Elkhart). Bugg was last a salesman at Fort Wayne's Country/WBTU (93.3fm, Kendallville)

Dan Daggett, afternoon guy at Country/WLNB (102.7fm, Ligonier) moves offair to sales for all 3 GBC Media stations (WLNB, WRSW-AM & FM)

Oldies/WGTO (910am, Cassopolis, Michigan) is now broadcasting in AM Stereo.

Northwest

WZRK (101.7fm, Kentland) is sold by Lyle Robert Evans to Milner Broadcasting, owners of Oldies/WVLI in Kankakee, Illinois.

Artistic Media Partners' WAZY-AM (1410am, Lafayette) drops its simulcast of AC/WAZY-FM and flips to Standards under PD Steve Clark. According to an article in the Lafayette Journal and Courier, WAZY's programming comes from Westwood One, and they have added hourly CNN Radio News updates.

Attention Lafayette readers: IRW would be interested in hearing any reception reports on WFWR (91.5fm, Attica). We're unfamiliar with what format they're using and if they are on the air yet.

Eastcentral

Religious/WTGR (97.5fm, Union City, Ohio) adds a 2000 watt backup transmitter.

Central

After 53 years in radio, Talk/WIBC (1070am, Indianapolis) News Director Fred Heckman is retiring. According to Marc Allan's article in the Indianapolis Star, Heckman worked for 36 years with WIBC (1957-1993) and walked out when WIBC's former owners wanted to change to a "headline news" format. In 1994, when Jeff Smulyan's Emmis Communications purchased the station, Heckman returned. Heckman enjoyed doing vignettes on news items he would hear in his travels, calling them "My Town Indy". Always one to perform his civic responsibilities, Heckman was active with the Red Cross, Salvation Army, and the Boy Scouts amongst others. Heckman says "I've had a great run." IRW agrees.

Sports/WNDE (1260am, Indianapolis) debuts "Mark Patrick on Sports." Patrick, former WISH-TV (Channel 8, Indianapolis [CBS]) Sports Director, will host the daily 3pm - 6pm show with _Indianapolis Star_ columnist Bill Benner. Patrick and Benner replace Tim Bragg's "The Sports Daily", as Bragg is now a reporter/producer at WRTV-TV (Channel 6, Indianapolis [ABC])

Bob & Tom add WCUZ in Grand Rapids, Michigan to their affiliate lineup. Staying in the Great Lakes State, we'll also tell you that due to a format change, Bob & Tom were dropped from WIQB in Ann Arbor, Michigan.

Westcentral

Alternative/WZZQ (107.5fm, Terre Haute) morning man Monty Bagley (aka "Del Monte") exits. Also, night guy Aaron Green adds MD responsibilities. Finally, the station drops "The Edge" and is now "Z-107.5"

Congrats to Jeff McCall and the entire staff at DePauw University's WGRE (91.5fm, Greencastle). _The Princeton Review_ ranked WGRE #1 in their category "Great College Radio Station".

Southcentral

An example of David versus Goliath: In this case, David is WYGB (102.9fm, Edinburgh) and Goliath is Country/WKKG (101.5fm, Columbus). WYGB signed on for on-air testing on 6 September by simulcasting sister Hot AC/WRZQ (107.3fm, Greensburg). Basic radio programming tells you that a well-done stunt format will attract even the most hardened listener to curiously take a listen to your station. WYGB satisfied by playing Rolf Harris' "Tie Me Kangaroo Down Sport" for 10 days straight. Mysteriously, a commercial appeared on WKKG for the fictitious "Southern Indiana Corn Producers"; a spot that had the word "Corn" spread throughout the entire production. WYGB officials deny buying the adtime for the spot. If you're curious to hear the spot, check out:

http://www.korncountry.com/sicp.mp3

Oh yes, onto the particulars: WYGB signed on with a country format as "Korn Country" (obviously!) on the 21st of September. WYGB is being programmed by WRZQ PD Scott Dugan and is jockless at the present time.

New AAA/WTTS (92.3fm, Bloomington) PD Jim Ziegler takes afternoon drive. Ziegler replaces Jimi Hurley who exits. Also, Jill Savage removes "interim" and is now permanently in morning drive (well, as permanent as radio is these days...)

Southwest

Cumulus Media has closed on the sale of the Connoisseur stations. However, the 4 Evansville properties have been spun off to Clear Channel, since Cumulus needs additional monies to fund the complete purchase of Connoisseur. Spun off to Clear Channel is News-Talk/WGBF-AM (1280am, Evansville), Rock/WGBF-FM (103.1fm, Henderson, Kentucky), Classic Rock/WTRI (94.9fm, Mount Carmel, Illinois), and Country/WYNG (105.3fm, Evansville).

Kevin "Crash" Davis is the new PD at Country/WYNG (105.3fm, Evansville). Davis is the former PD of Vail, Colorado-based Radio One Networks "Go Country!" format. Davis is no stranger to the Hoosier State: he was PD at Fort Wayne's Country/WBTU (93.3fm, Kendallville) from 1997 to 1998.

Incorrect information into IRW lead to last issue's error concerning CHR/WSTO (96.1fm, Owensboro, Kentucky). Here's their correct lineup.

Mornings: PD/Dr. Dave Michaels & Diane Douglas
Middays: MD/Cat Michaels
Afternoons: APD/Jimmy Ocean
Nights: Ladonna Sutton
Late Nights: "Puddin' "
Overnights: Brent Knight

That's it for this issue. See you in two weeks!

> > market with the technology.

No additional circuitry in the receiver would be necessary. The same technology the British government used to track down tax evaders would work to determine which station you're tuned to. (I believe they do still use it for TV but if I recall properly, a license is no longer required for radio)

Virtually all radios and TVs use a "superhetrodyne" circuit. In this circuit, the desired station's signal is mixed with a "dead air" signal to generate a constant "intermediate frequency" signal. This "IF" signal is always on the same frequency (usually 10.7MHz in FM radios) regardless of what station you're tuned to; the frequency of the "dead air" signal is varied so that it always differs from that of the desired station by 10.7MHz. So if you're listening to WPLN 90.3, your "dead air" signal is on 90.3+10.7=101.0MHz. If you change stations to WSM-FM 95.5, the "dead air" signal moves to 95.5+10.7=106.2MHz.

This "dead air" signal is meant for internal use within the radio's own circuits. But unavoidably, some of it will leak out. This can be detected with a sensitive receiver. And since virtually all radios use the same intermediate frequency, you can tell what station a passing radio is tuned to by finding its "dead air" signal.

In fact, ratings services have experimented with this scheme. It doesn't seem to be in widespread use though. I might guess a contributing reason is that you can tell a radio is on and tuned to a given station, but you can't tell how many people in what demographic (if any..) are listening.

I believe that they finally have admitted that Keith "Bad Moon" Reising
(head-man at Reising Radio Partners, owner of WRZQ,WYGB,WTRE and WUAZ) has
admitted he made that buy and wrote the spot to help some of his Maize
growing friends Many people are well aware of his friendship with
agribusiness and the best Corn in the world originates here in Indiana. He
wanted to praise the benefits of Corn, and where better to place the add
than the Top 2 stations in Columbus. I'm sure he wasn't trying to get the
heritage country station to air an add for his new station, Korn Country!
He was just helping his corn growin' friends! In honesty, I've been
involved in many format changes and startups (I once played "There Coming To
Take Me Away Ha Ha" for 2 weeks), but this one was one of the best. The
local media (who normally denies radio's existence) did 2 different
stories. It was a great beginning to a great radio station.

Not all radios share the same 10.7MHz IF , and not all oscillators will be at the received frequency+ the IF ... I have a couple of Sony receivers where the oscillators operate 10.5 MHz DOWN from the received frequency...

(also I have an old Sharp GF 8989, how old is this radio cassette monster?!?)

>Thanks
>Cindy!

Cindy,

I don't know anything about KCFX's operation, but I can answer a few of your other questions...

Some stations still use CD's, others use Hard Drive audio storage. Where I am employed, we use CD's for music and Hard Drive for non music events (i.e. spots / jingles, etc...)

We use the Arrakis Digilink Hard Drive system and On Air Digital's "Ultimate Digital Studio system for the CD's.

There are numerous systems which offer Hard Drive audio storage. To name a few:

Arrakis Digilink
BSI Wavestation
Computer Concepts DCS
ITC Digi-Center
Pristine - Rapidfire
RDS - Phantom
Scott Studios - AXS

and I am sure there are others I've missed...

It's also impossible to monitor EVERY radio. That's why they have
Arbitron ratings, to obtain a scientific sampling.

Also, in the UK, the monitoring trucks are a law enforcement tool. I
highly doubt that such snooping for commercial purposes would be legal
or tolerated by the American people.

Or a basis upon which to "profile" people, which would not only produce information for commercial market analysis, but also available upon request to law-enforcement authorities.

Don't laugh. Video shops have sometimes been put under pressure by police departments to compile listings of who rented what film and when.

There was even one police department near here that demanded a weekly list of renters of "adult" films, and when the video shop manager was advised by an attorney to refuse the request, a (failed) attempt at punitive legislation was launched.

And in my industry of computers, there are a lot of people out there selling spy-ware to monitor employees' desktop computer use. Purportedly this spy-ware exists as "productivity monitoring software". My counter-arguments to that are

1) if a guy or gal is doing his/her job, what's the difference what they're looking at on their screen or listening to on their computer speakers?

2) if you are paranoid enough to feel that you must monitor your employees' desktop computer usage, then don't give them access to the internet.

There have even been features on TV and NPR this week on how to monitor your spouses' computer use.

The mic pre amps on your soundcard are horrid. It'a a nature of the
design. Mic levels are very small voltages, and the inside of your
computer is a bad spot for weak, small voltage signals. An external mic
pre amp will make a huge difference in your sound. Go to your local music
store and see what you can afford. You can spend thousands on some
esoteric pre amp, but even the $100-$300 ones will make a big difference.
With cheaper mic's, the word is the ART Tube MP preamp (about the size of
a Walkman) makes things sound better. As far as mic's go, I recommend
large diaphram condensers. Cheap and good among those is the Rode NT-1.
Don't forget to get good quality cables and connectors too.

Flu shots are available at many supermarket and drug store chains.
Walgreens has begun its flu shot program, for example, and has a
locator number for shot locations and times at 1-800-FLU-9950.

4552. Re: ISO: Batwing Antenna Design Information

Newsgroup: rec.radio.broadcasting
Date: 2000-10-22 06:37:13 UTC
From: Robert Casey <wa2ise@ix.netcom.com>
Message-ID: <39F28B01.A8F86A75@ix.netcom.com>
Source record: 17048

The ratio of carrier frequency to bandwidth on 430MHz to 6MHz BW
is different than say 56MHz and 6MHz BW. A scaled up batwing
would have excessive bandwidth for your application. Might not
hurt, but out of band strong signals could cause trouble.

I agree totally with Craig.. get a small mixer or mic preamp and use the
line level inputs and it will sound better 10 fold!
The Creative Ensoniq is very similar to the Soundblaster "Live" in
recording/playing waves. Most of the difference between the two cards from
Creative are in Midi handling and midi instruments, not waves.

As I recall, the person whose rental activity they were looking for
was a politician. His opposition candidate wanted some dirt on how
unChristian he was because he rented some adult titles.

I believe the law now forbids the release of rental records. I'm sure
they're still easy to get but it's much harder to use them to defame a
candidate without having to explain you broke the law to get the info.

In a time when it seems that everyone is selling their mailing list to everyone else it does seem insane to think that any organization is above or beneath selling the information they have? Alvin Toffler told us 10 years ago that information would become the currency of the Information Age. Everybody wants it and everybody has a price for it. Arbitron is just way behind the technology curve. Any or all of the systems we're talking about now could be right over the horizon. Which one? Just tell me which one can turn a profit the fastest.

4558. Call to Action: Defend Democracy Now

Newsgroup: rec.radio.broadcasting
Date: 2000-10-23 00:00:00 UTC
From: Stop the Censorship of Amy Goodman <Slasher_@prodigy.net>
Message-ID: <01b801c03d2c$a745d1c0$0101a8c0@pavilion>
Source record: 17064

****
Coast to Coast Actions to Save "Democracy Now" & Take Back Pacifica
Wednesday, October 25
Berkeley, Houston, Los Angeles, New York, Washington, DC
****
On October 16, the Pacifica Radio network threatened to fire
"Democracy Now!" host Amy Goodman if she refused to comply with
a new set of "rules" which will make it impossible for her to
continue to produce the hard-hitting, breaking news stories
"Democracy Now" is famous for.
Itï¿½s clear that Pacifica is trying to force Amy out of her job.
"Democracy Now!" is Pacifica's most popular and influential show.
Hosted by award-winning journalists Amy Goodman and Juan Gonzalez,
the show is on the cutting edge of American journalism, bringing
the public stories and voices shut out of mainstream media and
standing out, as the show's motto declares, as "the exception
to the rulers."
The crackdown against "Democracy Now" is only the latest action
of a board of directors and national management that seems
determined to eviscerate the politics of the Pacifica Network<
the only progressive radio network in the United States. With
radio stations in Berkeley, Washington, DC, Los Angeles, Houston,
and New York, and affiliates nationwide, Pacifica is in a unique
position to bring progressive social, political, and cultural
programming to millions of people. But, under its current leadership,
Pacifica has abandoned and betrayed its mission. It has censored
journalists at several of its stations, used armed guards to
close down KPFA in Berkeley, threatened to sell the Berkeley
or New York stations, and eliminated listener input mechanisms
at a listener-sponsored radio network!
FAIR and Media Alliance urge Pacifica listeners to take to the
streets on October 25 in support of "Democracy Now!"

Roy,

I sometimes create music to add to voiceover spots that I create.
As many others have already mentioned, I too use ACID Pro to create beds.
One of the nicest aspects of this is to voice the spot before creating the
music. The voiceover can be loaded into ACID as a "one shot", or
non-repeating, file. Once the VO is in ACID, the loops can be placed into
the spot in relationship to the VO.
As an example, at a transition point in the copy, or at a specific
place, you can insert a drum hit, or change tempo or make the music achieve
a desired effect. You can assure that the music is in concert with the VO
for timing and feel, or change it on the fly as needed.
In other words, you can create the music to match the copy and the
voice. ACID Pro can be a great benefit.

No, this was not the case. They were not after ONE guy, nor was it involving a political campaign. Some town officials were upset that these materials were likely protected , it was a shop that was part of a national chain (with attorneys willing to back the shop owner against a small-town police chief) and it was a last-ditch effort to try to stop the shop from having a back room.

I don't know how they work it in other parts of the country; up here in New England most shops have their general-interest films out in front. The X-rated movies are in a separate, or back room that is off-limits to children but open to adults. Even some stores affiliated with SOME major national chains have back rooms.

> I believe the law now forbids the release of rental records. I'm sure

They can be released to law enforcement, with a search warrant - which means the police have to have some specific reason for looking at them and state that reason under oath. They cannot obtain the lists for "profiling" purposes or to go on what is called a "fishing expedition". And I doubt that any video shop owner would happily divulge details of who rented what, lest his business go down the tubes.

But even then, it can be worked around. One local video shop here in Haverhill used to keep the outstanding (meaning rentals outstanding, not referring to quality of the video) tapes and account info in their computer. When a film was returned, the record of what video was rented disappeared from the renter's account, but the hard-copy printout remained. Only the financial details remained on the computer to satisfy the accountant and the IRS. So if the cops wanted to look up

who rented what film, they would be escorted to a back room where around 150,000 rental slips were stacked up willy-nilly, and they were told to have fun.

A Batwing has a bandwidth of up to 20% which is why it is so popular
at lowband freqs...On TV2 this means about a 10 MHz bandwidth more
than enough for 6MHz TV signals. On UHF it will have much more than
enough bandwidth to work the entire 420-450 band likely!

> Most of my questions relate to the proper feeding of each batwing layer,

Excellent info...You can look in the book "Antennas" by Kraus for
some detailed info on the Batwing. Also the "Antenna Handbook Volume
III" by Lo/Lee has some good info on it and other horizontal
antennas that would be great for use on 440 ATV.

> I'm soliciting comments from anyone would might be able to provide
> construction and design information details. None of the antenna
> literature I have come across provides enough PRACTICAL information
> to formally develop a set of plans for constructing such an antenna.

See above...btw to feed the batwing is like any other crossed dipole
antenna..you merely use power dividers or coax matching lines to
split the feed and then provide matching to the elements which are
50 ohm nominal....The wings themselves are attached to the mast at
the top and bottom....hence they are grounded already! I can send you
some pictures of commercial batwings and their matching/feed so

you can get an idea on how they do it...

It shouldn't be a problem in this case. The repeater's receiver
and transmitter are protected by two layers of bandpass filtering
(interdigital and combline), and the fact that the antenna is
horizontally polarized will further reduce pick-up from nearby
vertically polarized signals.

The broad bandwidth will also relax the construction tolerances
somewhat, and make the antenna less subject to the de-tuning effects
of rain and ice on the radiating elements.

I just need to be concerned with keeping the number of dissimilar metals
to a minimum to reduce the IMD that could be produced by a broadband
antenna in a high RF environment.

I have the Kraus book, which provides the physical dimensions of each batwing. Someone suggested trying to find info on the Batwing from an old issue of "RCA Review" around the time the Batwing was introduced by RCA. That'll be a challenge. :-)

> See above...btw to feed the batwing is like any other crossed dipole

> 50 ohm nominal....

They ARE 50 ohms? I thought I read somewhere they were closer to 70 (might have been in an old First-Class Radiotelephone License manual). If that's the case, I would make the entire array a 70 ohm antenna, and use an alternate line transformer after all the power dividing and the 90 degree delay line to bring it down to 50 ohms.

> The wings themselves are attached to the mast at
> the top and bottom....hence they are grounded already! I can send you
> some pictures of commercial batwings and their matching/feed so
> you can get an idea on how they do it...

That would be ideal. A picture is worth a thousand words. :-)

Thanks!

4569. Dr. Demento Show

Newsgroup: rec.radio.broadcasting
Date: 2000-10-24 00:00:00 UTC
From: David Tanny <davidtan@cts.com>
Message-ID: <pgqbvs8pklc6aostg5qa77rup4qt74iedq@4ax.com>
Source record: 17075

This is aimed for the radio professionals.

Please state your honest opinions about the Dr. Demento Show.

Is the show still revelant to your radio station in terms of the songs played or could your radio station do a local version with musical selections that better serve your local listening audience?

What about the genres on Demento? Do they fit the musical direction of your radio format or are some of them too far off to program (grunge, folk, mellow, disco, etc.)?

Are the classics holding up with the listeners or are some of the songs overrecycled and overplayed too much? Are they tired of Fish Heads and Dead Puppies for example?

Are there subjects that the show plays that are too offensive for your acceptable subject range (songs about farting, robbing, necrophilia, pedophilia, stalking, etc)

Are some of the subjects too cult or far-off for the listener to relate to?

Are bleeped-out words in any recordings acceptable to your station? Some radio stations have strict codes that won't even allow bleeped-out words over their airwaves. (George Carlin's edited Seven Dirty Words, for example)

Is the show too cerebral to the average audience or are some of the subjects too infantile?

Are there conflicts of interest between the ads that are pre-inserted within the program and the parent company that operates the radio station? Some radio stations refuse to carry syndicated radio shows because of the conflict with the ads.

Is it otherwise cheaper to run voicetracking and playlist automation on Sunday nights than to run a syndicated program of any variety? Is Demento too overpriced for your station?

And if you have ever dealt with On the Radio Broadcasting, give your honest opinion about them.

Any other comments?

thank you

Support good music. Quit buying the bad songs!

4570. VOICE RECORDING - help needed

Newsgroup: rec.radio.broadcasting
Date: 2000-10-24 00:00:00 UTC
From: Matej Gatnik <apt@s5.net>
Message-ID: <39f5f69d@news.s5.net>
Source record: 17076

I was wondering if anybody knows how to obtain (in production using effects) that deep, rich voice of speakers that is used in movie trailers. Which effects should be used and how should be the thing recorded?

Thanx in advance,

Matt

Source record: 17078

95 percent of it is having good 'pipes', i.e., a full rounded voice...with good tone.

Using a good mic and the proper processing, EQ and compression. . .one can get 'that sound' ....the so called 'in a world of...' movie trailer sound.

Cool Edit Pro has some good third party plug ins available (in Direct X) that work well. Any of the TC Native or Essentials stuff is good..

Experiment. The best thing to do is train your voice (or get voice instruction) to get 'that sound'.

Regards,

Matt "the Prod. Man" Lane

Do you want broadcasting to be a medium that most parents I personally
know
think makes their kids dumb, unartistic, and hypocritical? Apparently,
yes. Most of the kids I meet sound exactly like **ONE** and only
one TV show I know, and that is South Park.

These censorship rules simply cause children to learn that
government is the enemy.

Copies of this FAQ are distributed monthly to rec.answers,
rec.radio.info, rec.radio.broadcasting, rec.antiques.radio+phono and
other news groups; and are on file at bloom-picayune.mit.edu in the
file: /pub/usenet-by-group/news.answers/radio/old-time-faq. A recent
text version can usually be found at
http://www.old-time.com/ffiles/otr.faq The most recent HTML-ized
version is at http://www.old-time.com/otrfaq.html

---------------------------------------------------------------------
Table of contents:

Q01. What is "OTR"?
Q02. You haven't mentioned OTR music, why not?
Q03. Where can I buy recordings of old radio shows?
Q04. Which vendors have (lower prices) (higher quality) (faster
response)?
Q05. Are OTR shows rebroadcast? If so, where and when?
Q06. I remember a great show called (x). When was it aired?
Q07. Are there any books about OTR?
Q08. Does anybody trade tapes of OTR shows?
Q09. What's this stuff about Copyright?
Q10. How can I get my local radio or TV station to broadcast OTR
programming?
Q11. I have some old transcriptions and tapes, how can I make them
sound better?
Q12. Are there any OTR clubs near me?
Q13. I have some OTR tapes of the same program, but their dates are
different. Why?
Q14. Is there anywhere I can get a complete listing of all the
episodes in a serial?
Q15. Is there anywhere I can get a written synopsis of the plots or
themes of OTR programs?
Q16. Is there a World Wide Web page (URL) I can access for more info?
```

Q17. Is there an email newsletter on OTR? How do I subscribe to it?
Q18. What ever happened to the person that played [insert character] on [insert name of show]?
Q19. What is the best way to archive OTR programs?
Q20. My old reels squeak. Why does this happen, and can I fix it?
Q21. Where can I find more information about antique radios?
Q22. What is the best radio / antenna to get distant OTR stations?
Q23. Is there a group for modern radio drama ("new-time radio")?
Q24. I have only email access to the Net. Can I still get the files at your site?
Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?
Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?
Q27. All this new software is a bit difficult for me to use, as I am blind. Can you give me any assistance on how to access your page?
Q28. I am interested in re-creating some OTR drama. Where can I get scripts?
Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?
Q30. Can I chat with other OTR fans on the internet?
Q31. Where can I buy 1970s CBS Radio Mystery Theater programs?
Q32. Is there an internet news group for old time radio?
Q33. OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?
Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?
Q35. Is there any information on OTR conventions?
Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?
Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?
Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?
Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?
Q40. What MP3 player is best for OTR?

Q01. What is "OTR"?

A01. OTR is an acronym for "Old Time Radio", a term loosely applied to radio programs broadcast from the dawn of broadcasting to the very early 1960s. Alternate names are "radio nostalgia", "golden age radio", etc. Usually this applies to radio drama, mystery stories, comedy and adventures. Some individuals classify the resurgence of this type of radio programming in the '60s and '70s as "Revival

Radio", and similar programming since the '70s as "Modern Radio Drama". Purists even discriminate between the "Golden Age" (late '30s and the decade of the '40s) and the "Silver Age" ('50s). In any case, there are plenty of programs of various types that are enjoyable entertainment. Best of all, they don't require a large screen TV to enjoy 'em -- the "visuals" are provided by the listener's imagination.

Q02. You haven't mentioned OTR music, why not?

A02. There was a good deal of big band, bluegrass, country and other music broadcast during this era. For some reason, there seems to be more current interest in the dramas rather than in the music. You will find much more discussion about this topic in alt.music.big-band or the various news groups specializing in music of various types. Bluegrass fans might enjoy the Old Time Music on the Radio WWW pages. (They happen to use the same acronym, "OTR", but are not affiliated with The Original Old-Time Radio (OTR) pages). In addition, there is a Big Band and Other OTR Music BBS at www.old-time.com/otrbbss.html/

Q03. Where can I buy recordings of old radio shows?

A03. There are several individuals and companies willing to sell tapes and CDs of OTR programs. A partial list can be obtained from the www.old-time.com site. Many public libraries have a small stock for perusal as well. Some vendors and collectors even have their own WWW pages.

Q04. Which vendors have (lower prices) (higher quality) (faster response)?

A04. Prices, quality and service differ somewhat among all vendors. Check with other OTR fans to learn of their experiences, then check with potential vendors.

A comparative price chart, listing many vendors, is available at the www.old-time.com site.

Audio quality is an important consideration when purchasing recorded tapes. As yet, there is no "standardized" description of sound quality. Jim Widner and other OTR collectors have suggested various metrics to describe the quality of OTR recordings. Discussion of these standardized descriptors is summarized at the www.old-time.com site

---

Q05. Are OTR shows rebroadcast? If so, where and when?

A05. Yes, several AM and FM radio stations, satellite feeds, a shortwave station, and at least one Public Access TV station

rebroadcast OTR. Check the Old-Time WWW page for current info. If you learn of other sources, leave a note!

For AM listening, try the National Radio Club's AM Radio Log, 17th Edition: Complete Listing of U.S. and Canada AM Radio Stations (Mannsville, N.Y.: NRC, 1997). All AM stations carrying things like "Old Time Radio" are listed with the format code NOS (Nostalgia), and there are lots of other codes. [Order from NRC Publications, Box 164, Mannsville NY 13661-0164 USA. Price is: $22.95 post paid]

For FM listening, try Bruce F. Elving's FM Atlas (Esko, MN: FM Atlas Pub., 1993). Alongside lists, this has maps of your area and its stations as well. [Order from Bruce Elving, PO Box 336, Esko MN 55733-0336. Price Range: $11.00 + approx. $1.00 s/h]

The M Street Radio Directory, M Street at +1 615-251-1525 voice, or +1 615-251-8798 FAX. The address is M Street Corp., PO Box 23150 Nashville, TN 37202 The price for the 8th edition is $65.00 plus S&H

Q06. I remember a great show called (x). When was it aired?

A06. If the show was heard nationwide, look through the program databases / logs at the Old-Time site or at Jerry Haendiges' site (see answer A14 below). If the show was only on local radio, you will have more difficulty in finding an answer. Checking with your local radio stations is probably the best bet.

Q07. Are there any books about OTR?

A07. Yes, there are many books related to OTR. See the www.old-time.com site for a bibliography of several hundred books. There is also a page where you can read or enter critiques or reviews of various books on OTR.

Jim Widner and Everett L. Slosman left this address for a bookstore specializing in OTR books:

Rainy Day Books
P.O. Box 775, Rt. 119
Fitzwilliam, NH 03447
(603)585-3448

Bob Crump reminded us that most good used book stores will do a nationwide search for a title, if given enough time. Henry Brugsch related a good experience with the following on-line bookstore:

Acorn Books acornbks@netcom.com

There are also several "book finding" services that will help obtain old/out of print books for a fee.

Q08. Does anybody trade tapes of OTR shows?

A08. Yes. Check with the various on-line OTR services. Leave a note in the OTR Digest, alt.radio.oldtime, or Ray Plumlee's OTR Traders BBS at http://otr-trader.com/ Remember to observe copyright laws!

Q09. What's this stuff about Copyright?

A9. The copyrights on some OTR shows have expired. Several copyrights have been renewed, and some may have fallen under "common law" copyright (even though they were not originally copyrighted). 1970s era Berne Convention agreements further cloud the issue for non-lawyers. See the Old-Time WWW site for the latest "common sense" and legal citations.

A concise answer was given by 'A. Joseph Ross' (lawyer@world.std.com) (used with his permission):

Just to get a little perspective in this
controversy, copyrights do expire. Under the old
copyright law, a copyright was good for 28 years
from the date of first publication, renewable for
another 28 years, for a total of 56. Under the 1976
act, those copyrights were extended to 75 years,
provided they were renewed. Copyrights under the new
law, which took effect on 1 January 1978, are good
for the life of the author plus 50 years. Copyrights
on anonymous works, works made for hire, etc. are
good for 75 years after first publication.

So, since otr has just barely been around for 75
years, little or none of it is in the public domain
yet by reason of having been around for a long time.
The question of what constitutes publication, and
the fact that sound recordings could not be
independently copyrighted until the new law took
effect add additional complications.

Q10. How can I get my local radio or TV station to broadcast OTR programming?

A10. Call the station and tell them of the many people who like to listen to OTR. Suggest this programming will increase the number of listeners and help buy things from their advertisers.

Shawn Fulper-Smith (shawnf@cc1.uca.edu), a managing director of a non-commercial station, tells us:

The days of radio being ruled by the artisans is over, and
for some time now it has been in the hands of people who
only look at the bottom line, so to reach them you must
talk through public radio pledges, or through sponsors

on commercial stations.

Don Fisher (dfisher@sover.net) has been successful in getting his local Public Access TV station to rebroadcast OTR. In fact, Don is the MC of the program. Contact him for hints on how to get your Public Access TV station to do something similar.

Elizabeth McLeod (lizmcl@midcoast.com), who has spent more than 15 years working in local radio, gave the following advice:

I can tell you that one phone call from a listener means absolutely nothing to a program director. PD's are totally under the thumbs of their General Managers -- and GMs, in turn, base their decisions EXCLUSIVELY on sales issues. It doesn't matter how many people want to hear something -- if the GM doesn't think he can sell it, if the GM doesn't think it'll bring hard cash into the station, it won't get on the air. Period.

The only reason a commercial station exists is to make money for its owners. ALL decisions at the station, be they about programming or anything else, are made with this in mind.

Don't bother to approach the station itself, APPROACH THE STATION'S ADVERTISERS!!!

Listen to the station and figure out who its biggest sponsors are. Generally, they'll be local banks, car dealers, insurance agencies, and appliance retailers. Do you know anyone connected with these advertisers? Then approach these people. Tell them you've heard their ads on such and such a station, and that you think a lot of people would be interested in hearing OTR, and that advertising on an OTR series might be a good strategy. And get your friends to do the same. And be persistent! In other words, SELL THEM ON THE IDEA!

You need to keep in mind that some types of stations are more likely to air OTR than others. If your local station is has a firmly-defined format, you are probably "S-O-L," as the saying goes. They won't break format, no matter what. On the other hand, if you have a local non-commercial community-type station, way up on the left side of the FM dial, you may have a very good chance of success.

Q11. I have some old transcriptions and tapes, how can I make them sound better?

A11. You might try using a good equalizer and/or digital signal processing (DSP) unit between the playback and recording devices. Some people have mentioned that the Radio Shack DSP unit does a fair job. There are also other, more expensive DSP units available from Ham radio stores and audio stores. Some subscribers have attested to the efficacy of the Timewave brand of DSP units.

There are several computer programs available to convert analog sounds (as on a tape) to a digital format (e.g. WAV file). Some of these computer programs also have noise reduction, filtering and enhancement capabilities. In many cases, application of digital technology will improve the sound of a noisy or deteriorating analog tape. There is a problem, however, if the digitized rendition is re-recorded to tape, and subsequently re-digitized for further treatment. Since digitization is a sampling technique, sampling a sample can result in extremely degraded sound patterns.

A very nice program that will convert analog material to digital format is Audiotools by Andrew Fish. For more information on this software, visit the Audiotools BBS at www.old-time.com/otrbbss.html or Andrew's site at http://www.btinternet.com/~amfish/index.htm

From: hhoward@mindspring.com (Henry Howard)

For cassette machines (and reel to reels for that matter) occasionally take a "Y" cord and connect the output of your cassette player to both "sides" of the "Y". Plug the combined side of the "Y" into your stereo. If the sound is mush(ier) than what you hear normally, you have a head alignment problem (assuming that the tape you are listening to was properly aligned.)

From: Ron_B._Hare@livewire.com (Ron B. Hare)

Dolby HX on the recording deck makes an audible difference. Other audio optimization features are of negligible value for OTR. Dolby HX also requires no playback decoder.

[Dolby HX uses or "preserves" the Dolby noise reduction method of the master tape when duplicating - ed.]

Q12. Are there any OTR clubs near me?

A12. Check the club listings in the Old-Time WWW page, and leave a note in one of the on-line OTR groups asking about local clubs for your area. If you find a club that is not listed at www.old-time.com, ask a club officer to send a note to the webmaster with particulars about the club.

Q13. I have some OTR tapes of the same program, but their dates are different. Why?

A13. Sometimes broadcasts are dated according to their original broadcast date, and sometimes according to a date on which they have been rebroadcast. For instance, the Armed Forces Radio Service rebroadcast many Mutual Radio transcriptions at a later date. Your tape may be of one of these later dates. Alternately, somebody might have made a mis-typopgoof.

Finally, some shows -were- broadcast more than once, and sometimes on different programs! For instance, a few Suspense shows were re-scripted / re-cast for Escape. You might also find similarities between certain SF shows as done on X Minus 1 and Dimension X.

Q14. Is there any place where I can get a complete listing of all the episodes in a particular program series?

A14. Some on-line OTR collectors have contributed Program Logs for several well-known series. The logs are available at www.old-time.com/otrlogs/ . While you are logged in at that site, check the "Humongous OTR Database" (a database of contributed catalogs and libraries), which is searchable with your WWW browser.

The "logs and publications" entry at the Old-Time WWW site gives names and addresses of several vendors of these items (thanks to RadioJoe5@aol.com (Joe Coleman) and others).

Jerry Haendiges maintains a VERY complete set of OTR program logs, at his Vintage Radio Place: (http://www.otrsite.com/radiolog)

Jay Hickerson maintains several logs and lists, as well as -Hello Again-, an OTR newsletter. Jay is the author of The Ultimate History of Network Radio Programming and Guide to All Circulating Shows. You can see more info at http://www.old-time.com/sponsors/hickerson.html

Jay's address is:

Jay Hickerson JayHick@aol.com
Box 4321
Hamden, CT 06514
(203) 248-2887 FAX (203) 281-1322

Q15. Is there any place where I can get a written synopsis of the plots or themes of OTR programs?

A15. Again, some vendors include this information with their catalogs. If you would like to contribute your interpretations of OTR plots or themes, send them to the on-line OTR services or to webmaster@old-time.com for inclusion in one of the databases.

Jim Widner and others have contributed some synopses / introductions to various programs. They are on file at http://www.otr.com and http://www.old-time.com.

David Hassell maintains a growing selection of program summaries at
http://members.aol.com/DavidLHsl/otr/otrlist.html

Also check Frank Passage's logs at the old-time WWW site; most
contain a short synopsis of the program.

Many of Jerry Haendiges' logs contain excellent summaries of not only
the program series, but of each episode as well.

Many of the local and national OTR clubs maintain informational
libraries with this material.

Q16. Is there a World Wide Web page (URL) that I can access for more
information?

A16. Yes, there are several WWW sites. Each site contains different
information, so you might want to visit them all. The major OTR WWW
sites all have links or pointers to each other, so you can explore
many topical areas within old time radio. Good places to start
exploring are:
www.old-time.com
or www.otr.com
or www.otrsite.com

A fairly lengthy list of WWW sites with some kind of OTR affiliation
is maintained at www.pe.net/~rnovak/jack.htm

An excellent database of OTR-related WWW sites, with an explanation
of the contents of each is at
www.otr.com/cgi-bin/cgiwrap/otr/db.cgi?uid=default

Q17. Is there an email newsletter on OTR? How do I subscribe to it?

A17. At least two email newsletters currently exist.

The Old-Time Radio Digest (AKA "Internet OTR Digest") is a very
popular and freely available electronic newsletter, delivered
nightly. Its purpose is to foster general discussions about the hobby
of collecting, preserving and listening to OTR. To subscribe, send an
email

TO: old.time.radio-request@oldradio.net
SUBJECT: subscribe
(The body of the message is ignored)

A general discussion list, "OldRadio", is maintained by a long-time
OTR fan, participant in many OTR conventions, and internet guru,
promises spam-free editions with good "flame" and off-topic
prevention, as well as articles by guest experts. To subscribe, send
email

To: oldradio-request@oldradio.net
Subject: Subscribe

(The body of the message is ignored)

Q18. What ever happened to the person that played [insert character] on [insert name of show]?

A18. Check the "Personality Pages" at www.old-time.com for home pages of several well-known OTR personalities. Also check the Where Are They Now pages at www.440int.com.

Q19. What is the best way to archive OTR programs?

A19. The most popular way seemed to be reel-reel tapes, using each of the four tracks to record monophonically. Modern reel machines are in the > $2,000 range, and used open reel machines are becoming harder to find.

Purists claim open reel tapes are best stored "tails out", in which the tape is played (not fast-forwarded) onto the take-up reel. This method of storage makes "print through" of the magnetic sound image a little less noticeable because the "echo" will come before the louder sound that caused it, and be somewhat masked by the louder sound.

Cassettes are generally fine for portability / ease of use / exchange, but they suffer from several problems when used as a long-term storage medium. These problems include "overwinding" and splitting of the tape at the leader. Because of their thinner track width and slower speed (1 7/8 IPS), the density of the information is greater than with wider and faster (3 3/4 IPS or 7 1/2 IPS) reel tapes. This leads to a greater loss of signal (particularly high frequencies) over time.

The Hi-Fi VHS tape is gaining in popularity because of its six-hour storage capability and relatively robust mechanical construction. "Hi-Fi" decks need no video signal to synch the systems, and can thus record audio without an accompanying video signal. One T-120 Stereo Hi-Fi VHS cassette can easily hold 12 hours of OTR audio (recorded monophonically on the right and left channels independently). If the linear track can be accessed independently, this will add six more hours of recording time. There is very little fidelity loss when using this medium to duplicate programs.

Conrad Trautmann (CONRADTRAUT@delphi.com) left this note in response to a query about finding used reel-reel machines:

You can also call Harris/Allied used equipment division at
1-800-622-0022 or call Radio World magazine at
703-998-7600 for subscription information. Radio World is
an industry trade and has used equipment listings in the
classifieds once a month.

(Jim Blackie [jblackie@aol.com] indicates that the Harris/Allied number has changed to: 1-800-300-0733.)

From: vintage@infohouse.com (Andy Blatt)

I wholeheartedly recommend Play It Again, Sam of Lakewood, Ohio. They also sell used Pioneer reel decks with a warranty and accept major credit cards for repair or used machines. The address is 12611 Madison Avenue in Lakewood, Ohio 44107. The phone number (no answering machine, no fax machine) is 216-228-7330. As far as pitch control cassette decks, Marantz offers several one of which is the three-head portable PMD-430.

[Play It Again Sam has a WWW page at www.playitagainsam.com - ed]

Richard Novak (rnovak@ix.netcom.com) wrote this informative note on using Hi-Fi VHS as an archival medium:

To clear up any misunderstandings concerning VHS HiFi machines and their ability to record audio, I offer the following..

It should be understood that what distinguishes a HiFi machine from a linear machine is that the audio track is recorded helically (diagonally) on the tape along with the video track. On linear machines the audio is recorded at the upper edge of the tape (and a control track at the lower edge, if anyone wonders what the extra head is for.)

On a HiFi VHS the audio is not recorded as an analog signal as would be the case with linear recording. Instead the analog audio signal frequency-modulates a carrier which is then recorded between the video tracks. A duplicate signal is also recorded linearly to maintain compatibility with linear VCRs. The FM signal recorded on the HiFi track should not be confused with FM radio broadcasts. One of my customers thought the FM switch on his HiFi was for recording FM from the radio. Today's machines no longer use the label "FM", instead use "HiFi". Less confusing.

The sound recorded from FM radio broadcasts (or any other source) onto HiFi VCRs is virtually indistinguishable from the source. The material can be dubbed to cassette with no generation loss.

There is no difference in audio quality using either six hour or two hour mode.

It is true that at slower speeds the diagonal tracks are closer together. This does degrade the video signal as anyone knows who has compared six hour video with two hour video. But does not degrade the FM carrier with the audio track.

The tape writing speed of the audio track in HiFi mode is the same regardless of linear speed. This is because the head speed remains constant and is independent of the linear tape speed.

Worked it out once and it is around seven meters per second. Whatever it is, it's a whole bunch faster than 7 1/2 inches per second. If anyone really wants to know the writing speed, it is the circumference of the upper cylinder (or video head) multiplied by the rotational speed which is 30 revolutions per second, or 1800 revolutions per minute. (Two heads 180 degrees apart at thirty rps results in 60 frames per second.)

Who cares how it works.. The point is that VHS HiFi is the best and cheapest medium around for recording masters. But not for archiving. Most experts still agree that reel to reel is the best and most reliable method of archiving. (Sticky shed syndrome from the 70s notwithstanding.)

Although Bob Burnham does not like dubbing (two-well) cassette decks for producing highest-quality cassette tapes, he does have a few recommendations:

One of the BEST dubbing decks (if you must use one) is made by Denon. Both sides can record at the same time and both sides have pitch control, and both sides have separate output jacks for connecting to other equipment.... almost like TWO (click) TWO (click) TWO DECKS in one. Tascam (Teac's pro division) also recently introduced their model 303 double deck. If it's anything like the 202 MKII, it's probably not worth it. You pay a high price for the name, but still basically consumer grade inside and lots of plastic. Denon is better.

I mentioned Kingdom Tapes in Mansfield, PA as a good source for cassette copiers, and equipment servicing. All the duplicators I have in use today came from this company. They have all the major brands (plus their own house brand), also tape decks, blank cassettes, etc. Great service (same day usually available). They'll beat anyone's price on cassette dubbers. 800-788-1122. Fax is 717-662-3875.

Bob Burnham / BRC Productions / P.O. Box 2645 / Livonia, MI 48151 platecap@gatecom.com / platecap@eworld.com

Several hobbyists are now investigating the utility of using CD-ROM or MiniDisks for archival purposes. CD-ROMs can hold hundreds of hours of program material, but at the cost of time-consuming conversion from analog to digital representations. Selection of appropriate encoding and compression technologies is extremely important to prevent digital artifacts. MP3 (MPEG III) compression

seems to be more favored than is RealAudio(R) compression.

Q20. My old reels squeak. Why does this happen, and can I fix it?

A20. There are at least two causes for "squeaky reels" on a reel-reel tape recorder. (1) The tape edge may be rubbing against the rim of a distorted take-up reel, or (2) the oxide may be sticking to your erase (or other) heads. If the former, the least frustrating alternative is probably a new take-up reel. If the latter, Fred Korb left this note:

If you have any squeaky reels that you would like to recover, I will be glad to send you more information on how to do it. Just send me a stamped self addressed # 10 envelope and I will respond. Send your request to: Fred Korb, c/o Oldtime Radio Collectors and Traders Society, 725 Cardigan Court, Naperville, Illinois 60565-1202. I am willing to help you preserve the sounds of radio days gone by.

[Editor's note: Fred's method consists of a kit by which a lubricating film can be automatically applied to the tape as it is played. I tried it. Although temporary, it does indeed work! I'd recommend it for those squeaky tapes that you wish to re-record onto newer reels.]

Richard Fish (lodeston@bluemarble.net) also left this helpful info about an alternative method:

HYRDROLYZATION is the culprit. The tape material -- the backing, or the binder compound used to stick the magnetic particles to the plastic backing -- has absorbed water from the air. The water molecules actually make the tape expand a bit, so it doesn't fit the machined tape-guides properly anymore; and they can interfere with the lubrication impregnated into the tape; and it is theorized they can even interfere with the polished smoothness of the tape surface.

WHY SOME TAPES AND NOT OTHERS? It depends on the formulation of the plastic backing and binder. In the mid-70s, both 3M (Scotch) and Ampex, the two major tape manufacturers, started experimenting with their formulas. They thought they were introducing major improvements, but instead created a tape much more prone to hydrolization than anything had ever been. The problem did not show up for years, and the formulas did not get corrected until sometime in the mid-'80s. Theoretically any tape could get hydrolyzed over a long period of time, especially if stored in a high-humidity situation, but in

practice most squeaky tapes were made (roughly speaking) between 1975 and 1985.

WHAT'S THE FIX? Tom Lopez at ZBS (the most prolific and entreprenurially successful producer of radio drama in the US today) gave me his formula and I've done it many times now and it works:

Bake the tapes in a convection oven for 8 hours at 130 degrees Fahrenheit. It is entirely possible to bake a tape twice if the first time doesn't do the trick. You get about a three-week "window", sez Tom, before the tape starts to re-absorb water. So the best deal is to bake the tape and immediately make a copy. But if you forget to do it and it re-hydrolyzes, you can bake it again.

Q21. Where can I find more information about antique radios?

A21. An excellent place for discussions about antique radios, phonographs and accessories is the rec.antiques.radio+phono news group, created by Bill Robie. A pointer to his FAQ may also be found at http://www.old-time.com. Basically, r.a.r+p

- Is a *discussion* group, rather than a sales group (see r.a.m) - Focuses on radios, phonos, and related materials made before the 60s - Avoids "ham" radio gear (the Boat Anchors group covers that) - Has a -very- comprehensive FAQ that new folks should read

The University of Maryland has a WWW site entitled "Broadcast Pioneers' Library". This is an excellent resource for the serious / professional researcher. It can be accessed through the old-time WWW site, or directly via the URL: http://www.lib.umd.edu/UMCP/LAB/

Additional sites with pictures of old radios or other hardware resources may also be found at http://www.old-time.com

---

Q22. What is the best radio / antenna to get distant OTR stations?

A22. Several readers have been acclaiming the GE SuperRadio III as an excellent choice for picking up distant AM stations that carry OTR programming. Although the tuning dial has notoriously poor calibration, the sensitivity and selectivity seem superior to other radios.

Some readers have had good success with the Select-A-Tenna antenna advertised in several magazines, and the Grove Catalog. The S-A-T seems to be rather directional, and may eliminate off-axis interference.

Ham Radio magazines sometimes carry information about small loop antennas for AM DX-ing. Some pointers to instructions on how to build them are at http://www.old-time.com. Also, Dan Hughes

(dan@soltec.net) left this note:

Several years ago one of the electronic magazines ran
plans with dimensions and number of turns, etc to build
one of these antennas. I have built several and I'm no
mechanic. If you (or anyone else reading this) would
like a copy of the article and plans, visit my website
at http://members.soltec.net/~dan

If you are interested in AM Broadcast Band reception, and technical
articles related thereto, send a SASE to the following address for
their product catalog:

National Radio Club
Publications Center
PO Box 164
Mannsville, NY 13667-0164

(The National Radio Club also has a WWW page, at www.nrcdxas.org/)

Q23. Is there a group for modern radio drama ("new-time radio")?

A23. There are several USENET groups whose charters include modern
drama. Check the lists on your local Internet provider to see which
are available to you. Here is a list of some of the WWW pages for
radio drama (more may be found at http://www.old-time.com):

Atlanta Radio Theatre Company: www.artc.org
ZBS Media http://www.zbs.org/zbs.html
LodesTone Productions
http://www.bluemarble.net/lodeston/lode.html
Midwest Radio Theatre Workshop http://www.mrtw.org/mrtw

Q24. I have only email access to the Net. Can I still get the files
at your site?

A24. Maybe. WWW pages can be retrieved by email. Get the following
file for more information:

Accessing The Internet By E-Mail
Doctor Bob's Guide to Offline Internet Access

This document is now available from several automated mail
servers.
To get the latest edition, send e-mail to one of the addresses
below.

To: mail-server@rtfm.mit.edu (for US, Canada & South America)
Enter only this line in the BODY of the note:
send usenet/news.answers/internet-services/access-via-email

To: mailbase@mailbase.ac.uk (for Europe, Asia, etc.)
Enter only this line in the BODY of the note:
send lis-iis e-access-inet.txt

Since the OTR FAQ is an "official" FAQ, a copy of it is stored at MIT, and is available from the MIT mailserver. For more info on how to get files by email from MIT, send a message

TO: mail-server@rtfm.mit.edu
SUBJECT: [blank]
BODY:
help
end

I have also initiated a simplistic file server. At present, it can handle only a few files. If you have ONLY email access to the Internet, and want more information on what is available by email, send an email in EXACTLY this format:

To: files@old-time.com
Subject: send help.otr

do NOT put anything in the body of the message (it won't be read)

Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?

A25. Yes, if you have a suitable WWW browser and sound card. Connect to any of the WWW sites mentioned above, and follow the pointers to their audio clips and / or soundbytes. Many of the soundbytes can be downloaded, and played on your computer's sound card, others will play "realtime" through your multimedia system. There is also a news group, alt.binaries.sounds.radio.oldtime, that tries to transfer OTR shows (news groups are notoriously inefficient at transferring large binary files, however).

You can select from many moderate-length soundbytes at Jerry Haendiges' Preview Listening Lounge at
www.otrsite.com/ra/preview.html

Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?

A26. Collectors with lots of cassettes seem to use just about everything from "underbed cardboard storage boxes" to old soft drink cases. If you want your collection to have a more "professional" look, here is a note from Ron_B._Hare@livewire.com (Ron B. Hare)

You almost need to buy cassette albums from
specialty suppliers. Radio Shack used to carry a
small line of these and charged too much. We are in
the recording studio business, and receive catalogs

from several sources. The one I like best has
some of the lowest prices and unhesitatingly deals
with individuals and will take your credit card
number over the phone for instant shipment (in
contrast to some who require account setup, purchase
orders, prepayment, cash and other nuisances).

They have two catalogs: one for audio and one for
video. Cassette albums are available in a large
number of different styles, sizes and capacities.
The 8-cassette albums I use are CPCN.4+4M/WHT in
white and CPCN.4+4M/RBLU in royal blue. Outside
dimensions are 9 7/8 x 7 x 1 1/4 wide, so they fit
well on a bookshelf. This model also seems to cost
less per cassette than any of the other models,
though logic might lead you to the conclusion that
the larger capacity ones would cost less.
[Polyline has a website at www.polylinecorp.com, and their new
address and phone number are:

Polyline Corporation
1401 Estes Ave.
Elk Grove Village, IL 60007]

Q27. All this new software is a bit difficult for me to use, as I am
blind. Can you give me any assistance on how to read your page?

A27. Yes. Although my WWW page is best viewed with Netscape or
Microsoft Explorer, most pages render well with LYNX and associated
reader software.

Blind visitors who depend on DOS-based software to access the net, or
who use a reading program to audibly display their computer's output
might be interested in a program called "Nettamer". The Nettamer home
page is at www.nettamer.net/

Q28. I am interested in re-creating some OTR drama. Where can I get
scripts?

A28. Check your local or national OTR clubs. Many have a "print
library" that includes scripts. You can also point your browser at
the University of Maryland's script page, at
www.lib.umd.edu/UMCP/LAB/scripts.html

Jack French (OTRpiano@erols.com) said:

One excellent source is the book. "One Hundred Non-Royalty
Radio Plays" compiled by William Kozlenko, Greenberg Publ of
NYC 1941. It's certainly out of print now, but many libraries
would have a copy. I bought mine at a used book store a few
years ago. The 100 radio plays in the book include adventure,

mystery, fantasy, comedy and historical. Most were originally produced on educational stations in the 30s. Authors include Saroyan, Julian, and Liss.

Larry Groebe, of the Generic Radio Workshop, has several pages dedicated to on-line OTR scripts at web2.airmail.net/lgroebe/

Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?

A29. In addition to the old radio being mistuned, similar problems can be caused by one or more of the tape recorders used before you received your copy of the program. Print-through has already been mentioned in Q & A 19. Bob Burnham has a nice explanation of two more problems: crosstalk and channel leakage.

Crosstalk and Channel Leakage are 2 different things. OTR collectors seem to have the most problem with channel leakage.

When you hear another program faintly playing in the background in normal direction, this is usually Channel Leakage. This is a leftover problem from the 1970s & early '80s when most collectors traded on open reel tapes which were quarter-track mono -- there were different (separate) programs on left & right channels. This allowed 6 hours of shows to be placed on one reel. Unfortunately, many collectors would duplicate L & R shows simultaneously. Depending on the quality of the equipment (and its condition) it was common for one program to bleed into the opposite channel...especially if the collector was careless and allowed over-modulation.

Crosstalk results when a tape is recorded (or played back) on a machine with mis-aligned tape heads. It can also occur when trying to record over a 1/2 track recording with a 1/4 track machine with dirty or mis-aligned erase head. You usually will hear another program playing IN REVERSE in the background.

HOW TO PREVENT CHANNEL LEAKAGE AND CROSSTALK...

If duplicating quarter track reels, copy ONE channel or track at a time. As for crosstalk, make certain your machines are kept in proper alignment. Use a high quality BULK ERASER if you re-use old tapes... this is especially true for those who use reels.

Sorry, there is NOTHING you can do to remove these flaws once they are there.

Q30. Can I chat with other OTR fans on the internet?

A30. Yes. Lois Culver (lois@chatlink.com) and other OTR fans meet every Thursday at 8:00 PM Eastern time, on Channel #OldRadio, on the StarLink-IRC. If you are unfamiliar with Internet Relay Chat, please get software and instructions from your favorite Internet Service Provider or shareware/freeware software site, or connect to www.old-time.com/irc.html for basic instructions.

Q31. I'm looking for copies of old "CBS Mystery Theatre" radio programs, primarily from the 1970s era. Does anyone know where I can call or write to obtain such items? I'd like to purchase a complete set if possible.

A31. Jack French (OTRpiano@erols.com) left the following information:

You most certainly do not want a complete set of this series, because you couldn't afford it. There were 2,970 shows aired so even if you could find them for a buck an episode, you'd have to cough up three Gs. The series ran from 1-6-74 to 12-31-82 and since it came so late in radio history, every episode was recorded by somebody. All episodes are still copyrighted, and CBS enforces their copyrights. Therefore no dealer is going to list them, and collectors are reluctant to sell or rent them. Your only hope is to find some way to get copies in a fashion not in violation of copyright law.

Editor's note: By my count, there were about 1400 different CBSRMT shows. The rest may be duplicates.

Q32. Is there an internet news group for old time radio?

A32. Yes. alt.radio.oldtime is available via some news servers. Since many news servers ignore alt.groups, you may need to contact your ISP to get that news group listed locally. See www.old-time.com/newsgroups.html for more information. Also try www.deja.com to sample some of the messages.

Q33. OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?

A33. Two ways: Many networks used telephone lines to carry the show from the studio to transmitter sites. The show was done live at least twice - once for the East coast, once for the West. After Bing Crosby spearheaded the introduction of recorded shows (about 1948), the East coast show was recorded for later telephone transmission to the West coast.

Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?

A34. No. There are many books (Remember them? They have words printed on pieces of processed dead tree) written about what we now call "OTR". See answers A7 and A37. If you would like to contribute an original article about one or more facets of OTR, many of the webmasters of on-line OTR sites would be happy to consider archiving it.

Q35. Is there any information on OTR conventions?

A35. Yes. There are several. Here are some of the larger ones:
* Annual OTR and Nostalgia Convention in Cincinnati, OH (April)
* Radio Classics Live, Brockton MA (May)
* Annual Lum and Abner Society Convention (June)
* REPS Radio Showcase (June)
* Friends of Old-Time Radio (October)
* SPERDVAC (November)

See the convention page at www.old-time.com for specific dates and contact person info.

Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?

A36. Yes. Try Old Time Radio Bulletin Boards at www.old-time.com/otrbbss.html. That page contains a list of several old-time radio oriented WWW bulletin boards. You can also access OTR message boards at www.lofcom.com

---

Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?

A37. Jack French, an expert on old-time radio and editor of Radio Recall, gives us this information:

There's good news and bad news....the good news is if Jay's compendium says they are in circulation, somebody has them. The bad news is there is no guarantee you'll find them. Let's start at the beginning. If they're in Jay's book, and there is either the initials of a dealer, log preparer, or collector with that entry, the assumption is that person has some or maybe most. If the entry is devoid of such, we push on. Few dealers list rare shows in catalogs since so few people want to buy them. Generally the catalog represents a small part of a dealer's or collector's total holdings. There are at least forty OTR dealers in the country so you can

contact each one with a specific inquiry. Most collectors belong to at least one OTR club. There are about 20 clubs. Most will publish your request in their newsletter for little or no cost. Most of the members of OTR clubs are not on-line so this is the only way to reach them. There are over 25 state and college archives that may have the shows. Most have no catalog but will answer any reasonable inquiry. Contact them all. All of the contact addresses for OTR clubs, pubs, dealers, and archives are contained in NARA OTR Source List. Contact me separately if you're interested in this low-cost research aid.

Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?

A38. Just as with home made recordings of any type, the quality of OTR MP3s varies considerably. Some of the online MP3s may have been converted from low sample rate RealAudio(tm) files, others might have been "ripped" from low-generation masters. Most CD-ROMs for sale on the WWW were recorded using these varying-quality MP3s. In other words, the MP3s in themselves are "collectable" only for the enjoyment one might get from listening or further trading. They have little intrinsic value, and are of unknown quality. It might help to associate your estimate of quality with the provider's name, to attempt to predict quality and avoid long downloads of poorly prepared material. Another point to remember - some OTR is still under copyright protection. Please observe applicable copyright laws.

Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?

A39. A large number of OTR personalities were interviewed by the author John Dunning. Stewart Wright, Editor of the RHAC Newsletter gave us the following information. (You can learn more about RHAC by checking their page at http://www.old-time.com/sponsors/rhac.html)

The Radio Historical Association of Colorado (RHAC) has tapes of many OTR personalities interviews that were conducted by John Dunning in the 1980's. Several Radio personalities such as Elliot Lewis were interviewed more than once. The following is a fairly complete list of the Dunning interviews in the RHAC library.

Steve Allen, Elvia Allman, Eve Arden, Hy Averback, Parley Baer, Parley Baer and Georgia Ellis, Parley Baer and Sam Edwards, Parley Baer and Whitfield Conner, Bill Baldwin, George Balzer, Harry Bartell, Andre Baruch and Bea Wain, Court Benson & Grace Matthews, Bernice Berwin, Mel Blanc, Ray Bradbury, Curley Bradley, Frank Bresee, Candy Candido, Hal Cantor, Charles

Collingwood, Whitfield Conner & Haila Stodd, Whitfield Conner and Parley Baer, Whitfield Conner and Virginia Greeg, Norman Corwin, Mary Jane Croft, D Day Program J Macvane & Lar, Dennis Day, Rosemary De Camp, John Dehner, Kenny Delmar, Jerry Devine, Howard Duff and Dick Joy, Richard Durham, Ruth Duskin Feldman, Sam Edwards, Sam Edwards and Janet Waldo, Alice Faye, George Fenneman, Morton Fine, Al Flanagan and Dick Mcdaniel, Paul Frees, Fred Friendly, Alice Frost, Art Gilmore, Roberta Goodwin (Bob Bailey's Daughter), Gale Gordon, Virginia Gregg, Virginia Gregg and Whitfield Conner, Phil Harris, Clarence Hartzell, Dennis Horseford, John Houseman, Bill Idelson, Raymond Johnson, Jack Johnstone, Jim Jordan, Dick Joy, Roland Kibbee, Sheldon Leonard, Phil Leslie, Larry Lesueur, Elliot Lewis, John Macvane, Fletcher Markle, Fletcher Markle, Grace Matthews & Court Benson, Dick McDaniel and Al Flanagan, Dick McDaniels and Pete Smythe, Marvin Miller, Shirley Mitchell, Carlton E Morris, Morris Kaplan, Frank Nelson, E Jack Neuman, Nelson Olmstead, Vic Perrin, Michael Raffetto, William N Robson, Eric Sevareid, Anne Seymour, William L. Shirer, Penny Singleton, Pete Smythe Collegiate Band, Olan Soule, Berne Surrey, Glenhall Taylor, Irene Tedrow, Cliff Thorsness, Les Tremayne, Lurene Tuttle, Veola Vonn, Janet Waldo, Gertrude Warner, Peggy Webber, Anne Whitfield, and Dr. Paul Winchell.

The Radio Enthusiasts of Puget Sound (REPS) also has interview tapes of many Old-Time Radio personalities. Most of these interviews have been conducted in the 1990's. Personalities include:

John Archer, Harry Bartell, Frank Buxton, Chris Conrad (Son of William Conrad), William Conrad, William Conrad & George Walsh, Stewart Conway, Norman Corwin, Sam Edwards, Herb Ellis, Charlie Flynn, Jim French, Sandra Gould, Burl Ives, Peggy Jordan (Granddaughter of Jim & Marian Jordan), Merrill Mael, Jo Anna March, Les Tremayne, Janet Waldo, Anne Whitfield Phillips, Rhoda Williams, and Douglas Young.

The REPS web site is located at: http://welcome.to/reps

Yesterday USA on the Internet is doing a series of live interviews with OTR personalities about one every two weeks. They start at approximately 8 PM (ET) on alternate Sundays and are about 1 hour in length. The interviews are conducted by John or Larry Gassman. So far they have done Harry Bartell, Herb Ellis, and Conrad Binyon. Listeners can call in questions.

You can find out more information on upcoming interviews by going to the YUSA Home page at http://www.yesterdayusa.com/

Q40. What MP3 player is best for OTR?

A40. MP3s can be played on most computers, memory (RAM)-based players, hard-drive players, and CD-ROM based players. Each player has advantages and disadvantages. A chart comparing various CD-ROM players for OTR playback suitability is at www.old-time.com

---

NOTE: URLs mentioned in this FAQ may have changed. For the latest information, point your browser to www.old-time.com, or join one of the internet mailgroups mentioned above. Email addresses listed here may have changed as well.

greetings,
i am interviewing for a network radio sales job, and am wanting some opinions. what do you think is the biggest challenge network radio
salespeople face, and how to you overcome it? especially in terms of dealing with
media buyers at ad agencies? also, what do you think is the most important skill for the job? i have a lot of sales experience and am guessing that
the tough thing today is getting them past the network radio vs network
television attitude, and to consider radio as more than just a complementary
media. however i may be wrong.

thanks,
karen lewelen

What Doug McDonald said was:

>Do you want broadcasting to be a medium that most parents I personally
>know think makes their kids dumb, unartistic, and hypocritical?
>Apparently, yes. Most of the kids I meet sound exactly like **ONE**
>and only one TV show I know, and that is South Park.

>These censorship rules simply cause children to learn that
>government is the enemy.

I think the PROCESS of excluding things the government finds
obejectionable is what convinces children that they do not have the
ability to express a novel idea because the government will prosecute
them for it.

Please forgive me if this is the wrong forum for this question
(and if possible direct me to a better one).

How can I find out who "owns" a particular (FM) frequency?

There is a station which appears to be broadcasting what I
can only describe as a heartbeat 24/7. How can I find out
who they are and why they are doing it?

Rachel,

"Ownership" of broadcast frequencies appears to be debatable
philpsophical question(!)

However, if you want to look up information on who is licenced to a
particular channel in a particular town, the official information is
online at:

http://www.fcc.gov/mmb/asd/fmq.html

If you're talking about 95.7 in Seattle, this was covered in the
alt.radio.broadcasting group. It's a stunt, designed to attract attention.
Obviously it worked. :)

The station will reportedly be relaunching friday with a "Jammin' Oldies"
type format as 95.7 The Beat.

It's true the modern vaccines are much improved and few people have
any reaction to them. Unfortunately, production is running behind schedule
and many areas will not have enough serum available to meet demand
until late November, well after "flu season" may have begun.

The FCC mandates that licensed stations identify by their call letters at the top of the hour or when there's a "natural break" in programming within four minutes of the top of the hour.

However, some stations accidentally on purpose "forget" to identify at the proper time on occasion. To find out what they're doing, turn on the radio at :55 and listen through :05. You are supposed to hear an ID if it's a licensed U.S. station.

I don't believe that the current rules state "4 minutes" but rather a vague
"natural break" which allows stations that sweep music to interpret the
natural break to be in the :50 stopset. The contents of 73.1201 (a): When
regularly required. Broadcast station identification announcements shall be
made: (1) At the beginning and ending of each time of operation, and (2)
hourly, as close to the hour as feasible, at a natural break in program
offerings.

There is no "4 minute window" anywhere in the section. Here is the entire
text:
Sec. 73.1201 Station identification.

(a) When regularly required. Broadcast station identification
announcements shall be made: (1) At the beginning and ending of each
time of operation, and (2) hourly, as close to the hour as feasible, at
a natural break in program offerings. Television broadcast stations may
make these announcements visually or aurally.
(b) Content. (1) Official station identification shall consist of
the station's call letters immediately followed by the community or

communities specified in its license as the station's location: Provided, That the name of the licensee or the station's frequency or channel number, or both, as stated on the station's license may be inserted between the call letters and station location. No other insertion is permissible.
(2) A station may include in its official station identification the name of any additional community or communities, but the community to which the station is licensed must be named first.
(c) Channel--(1) General. Except as otherwise provided in this paragraph, in making the identification announcement the call letters shall be given only on the channel identified thereby.
(2) Simultaneous AM (535-1605 kHz) and AM (1605-1705 kHz broadcasts. If the same licensee operates an AM broadcast station in the 535-1605 kHz band and an AM broadcast station in the 1605-1705 kHz band with both stations licensed to the same community and simultaneously broadcasts the same programs over the facilities of both such stations, station identification announcements may be made jointly for both stations for periods of such simultaneous operations.
(3) Satellite operation. When programming of a broadcast station is rebroadcast simultaneously over the facilities of a satellite station, the originating station may make identification announcements for the satellite station for periods of such simultaneous operation.
(i) In the case of a television broadcast station, such announcements, in addition to the information required by paragraph (b)(1) of this section, shall include the number of the channel on which each station is operating.
(ii) In the case of aural broadcast stations, such announcements, in addition to the information required by paragraph (b)(1) of this section, shall include the frequency on which each station is operating.
(d) Subscription television stations (STV). The requirements for official station identification applicable to TV stations will apply to Subscription TV stations except, during STV-encoded programming such station identification is not required. However, a station identification announcement will be made immediately prior to and following the encoded Subscription TV program period.

you can't really say that on all stations the legal ID is a feasible way of identifying them.. many stations bury them so quietly you can't even hear it, alot of stations read out the legal ID's as fast as the "fine print" in car dealer ads.. and i've heard some play the legal ID as early as :40 or :45

Ask the question on rec.travel.air There are at least three airline pilots who regularly answer questions on that newsgroup. Also the airnav.com site gives details within the USA.

AFAIK, private and commercial airplanes hardly ever communicate with each other. Communication is almost always between airplanes and ground stations and is in the 118 to 136+ MHz region. Military planes use the "military" frequencies - often in the 140 or 230-300 MHz regions. All of this communication uses AM.

Out over the ocean, aircraft communication is still in the HF region 3 to 18 MHz using SSB. This will be replaced by satellite communication in the (near?) future.

Hi Everybody:

Just a note to let everybody know that my lifelong dream came true yesterday. I was made a very nice offer by the Emerald City Radio group to become the Program Director of Oldies 97.7FM in Santa Rosa, California. I've always wanted to do this!!! I mean, for real, since I was ten years old, oldies has been the number one love of my life.

No longer "interim", I'm now the real deal, and absolutely thrilled to be. Hope everybody is doing really well. :)

Special thanks to my sweetie, the most wonderful, patient person in the world, Chris Watson. He coached and helped me every step of the way in going through the difficulties I encountered on the road to making this lifetime dream come true, and I am eternally grateful. Very heartfelt thanks also to my General Manager, Peggy Mulhall, and to Frank DeFrancesco and Paul Robinson of Emerald City Broadcasting. I am thrilled to have been given this tremendous opportunity, and I'm excited as hell at the chance to transform KMGG into the market leader I know it is capable of becoming!

Best to Everybody,
-Candi Chamberlain

theres a local station I could run an air check on and you would have all
the 70's style ads you could ever wish for in fact they sound closer to the
50's than the 70's

every programme element is sponsored.

and the commercials all sound the same.

but thats not what you were looking for..

4600. Re: VOICE RECORDING - help needed

Newsgroup: rec.radio.broadcasting
Date: 2000-10-29 05:01:22 UTC
From: Robert Jeffares <robert@pnn.org.nz>
Message-ID: <972795632.405772@nntp.win.co.nz>
Source record: 16956

start with a good voice

find someone who knows how to speak, and how to read so it sounds natural

people who breathe properly and can produce good rich clear tones.

in film and tv they call them actors, in radio we call them broadcasters.

then give them a room to work in that is not completely dead.

human voices work best in rooms that sound NATURAL. The voice is able to be
USED in a suitable room.

then pick a microphone to suit the voice.

some people sound good on ribbons.

some people sound good on dynamics

and if you must use a condenser set it on omni

and take the pop filter off

the people who do audio for theatre EQ to compensate for the room.

They roll off the bottom end below 60 hZ.

They boost at about 120Hz about 3-6db reasonably wide,\.

and they balance this with PRESENCE at 2kHz to 5.5kHz No more than 6db.

the EQ is tuned to the voice.

if it does not sound right go back to the top of the list and start again.

if one voice in a thousand is "good"

one voice in 50,000 is excellent.

one voice in a million is excellent.

I have had the good fortune to work with two or three.

Robert

Bob Carpenter <rcarpen@erols.com> wrote:

"AFAIK, private and commercial airplanes hardly ever communicate with each other. Communication is almost always between airplanes and ground stations and is in the 118 to 136+ MHz region."

Actually, on a lot of small fields there is no operating tower (at least part of the time), and pilots in the airport area *do* talk to each other (in order to stay out of each other's way) on a common frequency known as "unicom," which is usually 122.8 MHz. There are also frequencies available for air-to-air communication in special situations.

Hello,

I have heard this station and its Easy Listening format in the past while traveling from Pennsylvania to Indiana. They've also used some (corny) older jingles from the early 1960's. On a recent trip through the area, on a Sunday, I noticed that they were off the air. Can anyone in the area verify their status? Or are they just not on the air on Sundays?

I don't think there are enough people working in radio news nationally to
form a new group. Now if you include Metro/Shadow in the equation, you might
find a few more.

Actually, in some cases stations have arrangements with Metro for rather
solid news operations where the station assists in recruiting and training
talent and does joint airchecking and other tasks. Metro's MetroSource news
"wire" is now a fairly good service and is written for broadcast, not print.
A lot depends on how involved the station wants to be. If news is just
another spot carrier, they get what they want...

Hi,

A new request and dedication show is available for free to radio stations all over the world! If you are a radio station that would like the show, please e-mail me.

If you would like to participate in the show and be a 3DSJ World Wide Superjock, please read A Message From A Disc Jockey, below.

Thanks,

Bill Elliott
3DSJ

A MESSAGE FROM A DISC JOCKEY
HALLOWEEN NIGHT 2000

Hi,

My name is Bill Elliott and I'm writing from Tampa, Florida, USA. I hope that this letter will circulate to everyone on the planet because I need your help. I'm building a super radio station for you to listen on the internet and a program that will soon be available to radio stations all over the world for free!

The radio station and program are known as 3DSJ, which stand for "3 Dimensional Super Jock". Now, do I have something special?

You bet I do! Who are the "Super Jocks"? It's you, your friends, lovers, relatives and virtually everyone in the world. Wow! Can you imagine being part of a world wide broadcast where, you pick the music, we play the music and you dedicate the songs to everyone who's special to you!

Here's how you can help. Please call my request and dedication line in the USA at 813-926-4474. I need to know what song you would like me to play, the name of the artist, your name, where you're calling from. If you would like to dedicate the song to someone, please do! My beautiful and good looking telephone operator, Toots, is standing by to pass you on to the 24 hour Telematic Live Line. Oh, by the way, if there's a reason why the song is special to you, please tell me why.

Here's another way to reach me. You can send e-mail to digitalradioman@msn.com

My website, 3DSJ.COM will be up soon. Please keep checking for more information on when the broadcasts will start. I promise to bring you lots of fun, games and great music, programmed by you.

If you are a new music talent or group with a serious interest in a professional career I would like to hear from you and would appreciate a CD of your effort, and a report about how you started.

I'll be featuring new talent in the record review portion of my programming. Please mail to: Bill Elliott, 3DSJ, PO Box 271371, Tampa, FL 33688-1371.

Thanks for the help. Hope you enjoy!

Sincerely,

Bill Elliott

The level of engineering competence at many stations is at an abysmal
level. My partner has wound up giving engineering help to a local
station, and it was amazing how little the in-house staff knew.

I had a chance to tour the Texas Sate Network news studios at the KRLD suite in the Ballpark At Arlington a few years ago. Back then they were still using carts quite a bit. I don't know if they still do...

We use a Hard Drive storage system at KEOM, for all our spots / jingles, and CD's for music. The CD's are controlled with the Ultimate Digital Studio system from On-Air-Digital.

We still use carts in the newsroom along with mini-discs (we use MD's
as replacements for reel-to-reel and cassettes).

All spots, jingles, etc. are run off hard drives through the
AudioVault system, which we use for live-assist on KUZZ and full
automation on KCWR. But we still dub all spots to carts as backup in
case of computer crashes (which have happened).

Our new, all local news/talk station here in Portland, OR (KPAM, 860) apparently still has a few kinks to work out in their computer based system. Just this afternoon, the talk host (Bill Gallagher) threw it back to the CR and 10 seconds of dead air later came back and said "...broken again? Well, will we have the news at :30?"

A couple weeks ago on a weekday evening we were treated to almost 15 minutes of dead air while they apparently scrambled to find a way to play a tape(?) of a previous hour.

Don't get me wrong. I am a loyal KPAM listener (after my previous favorite KXL 750 was bought out by Paul Allen and turned into a sports jock station). KPAM is doing an admirable thing. They are one of the tiny handful of independently owned stations in town and they are (AFAIK) the ONLY one with all local content, and news/talk format at that! They still sound a little college-radio and I wish somebody would loose that music package disk! It was accurately described by the local radio discussion board as "sleepy elevator music"

Do you ever check your return e-mail?

You should have received a response from the robomoderator which asked
you to register.

Thereafter, you will get a response from the robomoderator each time
your mailed post is sent to the newsgroup.

We still use them in the newsroom but in the next month or so we will be
getting rid of them and replacing our WireReady computers with MetroSource
which includes both text and audio. At that point we will get rid of the
carts. Want some?

Message-ID: <3A02D6B3.376D84B4@scs.uiuc.edu>
Source record: 16981

My students asked about a display they saw me produce when
I was checkout out some new equipment:

I displayed music on a scope as as X-Y display right versus left.

Normally, like on a CD or WILL-FM, this looks sort of roundish,
as one would expect.

BUT .... on several local radio stations it is inscribed in a
SQUARE!!

And these are not all the same size !!!

Several stations are basically hard clipping .... AT LEVELS
DIFFERENT BY 3 dB!!!

WHY? Why are they not all exactly at 100% modulation? Are some
lower than 100% to have subcarriers? Are some HIGHER than 100%
because they know the FCC won't bother them?

4627. Stern Finally Comes To Eastern NC

Newsgroup: rec.radio.broadcasting
Date: 2000-11-04 00:00:00 UTC
From: "G.T. Tyson IV" <Tarkus@skantech.com>
Message-ID: <3A041107.36722D24@skantech.com>
Source record: 16985

As of about three weeks ago, after years of everyone saying it could never happen, Howard Stern is now being heard in the Greenville-Washington-New Bern-Jacksonville market of eastern NC. WXNR 99.5 (99X) picked up the show. WXNR is owned by the same station group that owns WSFL 106.5 which carries the John Boy & Billy show, so this case of self-competition should be interesting, especially when the local Baptists get wind of it.

New carts can be ordered from Harris/Allied, I believe, or probably
any of the other firms that supply broadcasters with equipment.

We recently ordered some 20's and 40's and had no problem getting
them. IIRC they were shipped the day we ordered them and I had them
three days later.

AFAIK, Catholic Radio folded. I understood they sold their
Baltimore-area station some months ago and it has reverted to all-sports
(or is about to).

I can't believe that stations would waste valuable production time dubbing
spots to cart, just in the off chance that the system crashes and the hard
drive is wiped out....what a waste of time and money. With the money your
station spends on time to dub to cart, the money to maintain cart machines
and buying and rewinding carts they could buy a redundant hard drive to back
up the whole system....stations are so pennywise and pound foolish. And if
they had bought the scott studio system they would have gotten a double
redundant system built in.

The station has redundant hard drives. But hard drives aren't the
only part of a computer system subject to catastrophic failure. (I've
had power supplies, network cards, and other parts fail on my own
machines from time to time). To dub a :60 spot to cart takes maybe
another :90--hardly enough time to worry about, when you consider the
overall time that goes into producing a spot. And when you consider
the revenue loss from missed spots that can't be made good because
we're sold out, that makes the carts a cheap insurance policy. Of
course, I suppose if you were selling cheap spots and didn't have
limits on your spot load, it wouldn't matter as much.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

4637. I Still "Q" In My Car

Newsgroup: rec.radio.broadcasting
Date: 2000-11-04 06:47:34 UTC
From: David Tanny <davidtan@cts.com>
Message-ID: <o8c70t8eed9ernfjctt9tg1gfcj0u3b0hq@4ax.com>
Source record: 16984

I STILL "Q" IN MY CAR
Contact: John Fox - 909 735 9120 or mondofox$$surfside.net
Note: to thwart spammers, I replaced the @ with $$ above. To send him an
e-mail, replace the $$ with the @.

Radio is different from what it was 20 to 40 years ago. Maybe better, maybe
worse, but definitely different.

If you treasure the "golden era" of Top 40 in the 60ï¿½s and 70ï¿½s, if you know
exactly who "Uncle Ricky" is, if you can name at
least five Top 40 era disc jockeys and if you get a kick out of hearing
charged up DJï¿½s and perfect talk-ups, youï¿½ll love the
new show "I Still Q In My Car" airing Saturdays from 6 to 10 p.m. beginning
November 18 on San Diegoï¿½s AM 1170,
KCBQ and with live streaming at http://www.kcbq.com

"I Still Q in My Car" is dedicated to the classic Q years and is a
combination talk show, oldies music and time capsule. Each
week features a different year in the history of the Q with music you would
have heard that year, classic KCBQ jingles,
promos, spots AND one or more guest hosts from that year.

The November 18 debut show will be guest hosted by former Q jocks "Shotgun"
Tom Kelly and Phil Flowers featuring the
music of 1973. On November 25, itï¿½s the 30th anniversary airing of the
KCBQ-produced and nationally aired Beatles
documentary "The Long and Winding Road." This three-hour tribute features
several exclusive Beatle interviews and hasnï¿½t
aired anywhere since 1970. The following week, December 2, former Q Program
Director and jock (1965-70) Gary Allyn
and former production wiz and jock Neil Ross - the creators of "The Long and
Winding Road", several other tribute
documentaries and the O.B. Ranger series will guest host with 1969 as the
spotlight year.

Future guests will include anyone who ever worked at the Q in any capacity,
are experts on music and radio of the era,
worked at a competitor, or for some other reason know a lot about Top 40
radio in San Diego.

The show is "facilitated" by Southern California radio veteran John Fox. His
credits include 16 years at KFMB and B-100
both on-air and behind the scenes as well as 6 years doing morning drive in
Los Angeles on KEZY, a year and a half
managing a national talk network and a year and a half as San Diego editor
for the online industry magazine RadioDigest.com.

Fox currently works part time at all news KFWB, Los Angeles and oldies formatted KOLA, San Bernardino.

"We'll talk about the history of the Q, things that weekï¿½s guests did at the time, listen to air checks, play music, take calls, answer any radio related questions and just generally let our guests do whatever kind of show they've always wanted to," says Fox. "For a show focusing on a traditionally tightly controlled format, itï¿½s ironic that ï¿½I Still Q in My Carï¿½ is going to be pretty free-form. Thatï¿½s why I like to call myself a facilitator for this show and not necessarily a host or producer.

"If one of the former Q jocks comes in prepped and ready to do a show exactly like one 30 years ago, Iï¿½ll just sit back, run the board and watch him go. If weï¿½re fortunate enough to secure some music industry support, weï¿½ll have contests and give away oldies CDï¿½s. Or if the phones are hot, weï¿½ll just swap stories with listeners. Whatever happens, itï¿½s all about celebrating the fun and bringing back the magic of those days when KCBQ had a 30 share of all listeners over the age of 12 and an 80 share among teens, which were the Qï¿½s actual ratings in 1969."

"I Still Q in My Car" welcomes old air check tapes and other radio memorabilia, phone interviews with listeners and former sponsors, commercial sponsorships and in-studio guest appearances by all media professionals including you! Because we all still Q in our cars!

Support good music. Quit buying the bad songs!

Yes, TSN and KRLD still use carts as of June of 2000, for all commericals.
I was quite shocked too, for a 50,000 watt station.

In a professional sense, as far as his career goes, though, Art Bell
is definently dead. It died the moment January 1, 2000 arrived without
any Y2K calamities.

Can you say ``CKTY''?

-GAWollman

PS: In case that hint was too opaque: some Canadian AMs have been
known in the past to operate using something other than their licensed
directional pattern. This is, however, the first I've heard of CKKW
possibly being one of them.

We have ten Audio Prisms spread around our three-station cluster, but no spares. Now one of the M-100 processor cards has gone bad and I don't think Gentner supports the product anymore.

Anybody have a working Audio Prism for sale or trade? Prefer the later version with bargraph LEDs and a few more test points.

Thanks, - David Sproul, Washington, DC

Also possible is CKKW, Kitchener-Waterloo ON: http://www.oldies1090.com

I've picked them up here in Boston previously a couple of times in late night and/or around sunrise (I think they were testing their--then--new frequency).

I dealt with this for a friend using CoolEdit (2000)
Record the tape to your Hard Drive, then open in CoolEdit.
There are commands to vary the speed and pitch, or just speed and keep
the pitch the same. I would imagine you'd want to change speed and
pitch.
In my case the speed of the original changed constantly, so I had to
select a section where the speed was "close" to the same, alter it 'til
it sounded right, then cut and paste it to a new WAV file. Then pick up
the next section, alter it the cut and paste to the end fo the new WAV
file. Over and over and over.
The tape was about 45 minutes long, and I spent much more time on it
than I wanted to -- but the end result was pretty good. Quite
interesting too, it was a man's grandfather talking about his life from
the time he and his wife rode in a covered wagon to west Texas to
sometime in the early 60's shortly before he died.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

Hi again. Was wondering if any New Yorkers know of a direct url for an audio clickon for Knicks basketball radio. By a fluke, I ***dwas able to find audio for rangers hockey, as I somehow found it on the Ranger's site, but I haven't found the Knicks site too accessible at all. A direct audio url would be a great help. Thanks again as always. I've always gotten lots of help responses here in the recent past. Thanks again!!

I was in the business, and have been out 10 years.

Now getting into writing, I need inspiration for a radio station stunt, but
I can remember only a few from my radio years.

I'd appreciate hearing about any stunts.

Thanks!

Currently running on KPAM 860AM independent News/Talk startup in Portland, OR.
http://www.radiofreeoregon.com = http://www.kpam.com

"$50,000 challenge" (Think: "Who Wants to be a Millionaire"!)

Four times per day (weekdays), phone-in contest is held.
Phone lines are cleared, 8th caller is "IT"
Presented with four multiple-choice questions.
First question is worth $100, second is worth $1000, third = $10,000, fourth = $50,000
Caller can quit after answering any question and keep cash.
Caller puts previous winnings on the line when answering next question (except for $100)
Each question and the four possible answers are read twice.
Caller is given 15 seconds to answer.
If caller blows $100 question, $100 is contributed to charity of the week in caller's name.

At 7:20am morning news host announces four times contest will be held that day.
Schedule of contests is varied from day to day.
Host also tells the correct answer to ONE of the $10,000 questions.
But NOT the question!
Just this week they changed it to giving a $50,000 answer.

So far they have given away slightly over $100,000
Nobody has tried for a $50,000 question (at least that I have heard about)

We have one station in the Boston area that has pulled two in the last few years.

One stunt was an April Fool's joke in which they announced that the Mayor of Boston had been killed in a car crash and played it as a serious news story. Real funny. Yuk Yuk. Sure caused some havoc at City Hall, and some real grief in the Mayor's relatives' homes.

Then, just two weeks ago, the same station played tape recordings purportedly made with a recorder planted inside a confession booth in a Catholic church. Haw haw haw haw. Real knee-slapper stuff.

Actually, the original incident was done at KENR (1070 AM) in Houston in the early 70's by a PD named Jay Blackburn. Many of the folks at the station thought turkeys could fly, as wild Texas birds did have the ability to go airborne, albeit not well. However, farm-raised birds are live bowling balls when it comes to flying. First bird went through the roof of a car, second knocked an awning off a store in the open-air mall doing the promotion.

It also appears that someone in Tidewater, VA, tried something similar, although I don't know the folks involved there.

WKRP used plenty of industry feedback to build the shows. In fact, the GM of one of the Atlanta stations (Jerry Blum and 'QXI come to mind) was a story consultant!

I'd suggest contacting the english service from Radio France via email :
english.service@rfi.fr
or check out their website : www.rfi.fr You might get a quicker reply
this way than via a letter.

4668. The "Buzz" in Rochester NY?

Newsgroup: rec.radio.broadcasting
Date: 2000-11-09 00:00:00 UTC
From: Frederic Phillips <phillips@twcny.rr.com>
Message-ID: <_KKO5.174186$JS3.26384827@typhoon.nyroc.rr.com>
Source record: 16924

Was sitting in the car last night waiting for the kid to get out of basketball practice (in a suburb of Syracuse, NY)and while playing with the tuning buttons on the car radio, I came across what I thought was, as a former Rochester resident, WBBF, an oldies station at 98.9. I listened to a couple of songs that didn't seem to fit their format through the static, and a sweeper came on saying "You're listening to the all new Buzz 98.9, with the hits of the eighties and more".

Listening a little further, another couple of songs played, another sweeper, and unfortunately, when the top of the hour ID came on, static prevented me from hearing the call letters, only that it was in Rochester, and that it was an Entercom station.

Is Entercom further bastardizing the heritage WBBF calls, or have they mercifully put them to rest (I was never real impressed with their oldies station, with their 200 song playlists and the jocks that even though they were live, could have just as easily been voice-tracked)? When did this change happen? Does anybody have any info on this change?

Thanks,

Fred

I'm not at all surprised that these things can happen. That in itself is
depressing. Now, the great thing would be if someone was filming it. Would
rank right up there with the 'beached whale' video.

Oh the humanity.....

While conducting a web search on another matter, I was saddened to find out about the death of Terry Zahn, a TV news anchor working out of Channel 13 WVEC in tidewater Virginia due to bone marrow cancer earlier this year. He was 53.

While not being close to him, I had worked with Terry as his supervisor at his first radio station in Milwaukee, starting back in 1965. Over the years I haven't followed up on him except to learn that he was still in broadcasting.

To satisfy my curiosity, I wonder if anyone might fill me in on where he had been and what he might have been up to in the years following 1967?

Can't forget these two:

1. The brain surgeon who thought it would be funny to hide money in a library book, and have half the town tear up the whole library looking for it.

2. The rocket scientist who blocked a major Bay Area bridge during rush hour, getting a hair cut (because Clinton supposedly did the same thing at LAX, was his excuse...)

Salem Communications to Acquire WXRT-AM 1160 in Chicago

CAMARILLO, Calif., Nov. 10 /PRNewswire/ --

Salem Communications Corporation (Nasdaq: SALM - news), the leading provider of Christian-oriented radio, electronic and printed resources, announced today that it will acquire station WXRT-AM (1160) in the Chicago market from Infinity Broadcasting Corporation (NYSE: INF - news). Salem Communications will pay $29 million for the station. Pending all regulatory approvals, Salem anticipates closing this transaction in the first half of 2001.

Salem Communications also owns and operates WYLL-FM (106.7) in Chicago, the #3 radio market.

Edward G. Atsinger III, President and CEO, commented: ``The acquisition of the powerful 50,000 watt WXRT-AM (1160) fits perfectly with our strategy to add stations in markets where we have established a foundational station operation, in this case, our flagship Chicago station WYLL-FM (106.7). The combination of these two stations will result in a dynamic cluster in this vital radio market, which is #3 both in radio revenues and population in the U.S.''

He continued, ``Salem Communications has been trying to acquire an additional properties in the Chicago market for years, but station owners have been justifiably reluctant to give up quality stations in this attractive and tight market. It was fortuitous for us that Infinity was required to divest itself of some of its portfolio (WXRT-AM) as a result of the merger of its parent company CBS with Viacom.''

Salem Communications Corporation is headquartered in Camarillo, California. Upon the close of all announced transactions, the company will own and/or operate 73 radio stations, including 52 stations in the top 25 markets. In addition to its radio properties, Salem owns the Salem Radio Network, which syndicates talk programming, news and music to nearly 1400 affiliated radio stations throughout the United States; OnePlace.com, the online division of Salem Communications; and CCM Communications, the leading publisher of contemporary Christian music trade and consumer publications.

Statements used in this press release that relate to future plans, events, financial results, prospects or performance are forward-looking statements as defined under the Private Securities Litigation Reform Act of 1995. Actual results may differ materially from those anticipated as a result of certain risks and uncertainties, including but not limited to the ability

of Salem to close and integrate announced transactions and other risks and uncertainties detailed from time to time in Salem's periodic reports on Forms 10-K, 10-Q and 8-K filed with the Securities and Exchange Commission. Readers are cautioned not to place undue reliance on these

Source record: 16934

Politics is never off-topic in a radio newsgroup, yet somehow this opinionated group has managed to avoid sounding off on this last great story of the 20th century.

Bush and Baker are mismanaging this situation, playing into Gore's hand. Shrill demands for an opponent to concede are very much a sign of weakness. Victory does not require the acquiescence of the defeated. It requires a mechanism by which the governing bodies of the contest can orderly come to closure. The electoral college votes on Dec. 18, and majority rules, even if Florida somehow fails to certify a victor and send electors.

And yes, Bush and Baker have now also sacrificed the statesmanlike high ground by being the first of the candidates to take the Florida recount to court.

Whatever he does, Gore will not be in this place again, and has every right to play all his cards. The electoral mechanism is magnificently designed so that in doing so he puts his own future in jeopardy, not the nation's. Electoral closure cannot and does not depend on Al Gore's personal sense of statesmanship.

As I recall, that was Mancow Mueller in his San Francisco days--and not that he's gotten any smarter since he came to Chicago. What I'd like to know is how someone like him who claims to be a true conservative, who was calling for the impeachment of Clinton and calls Rush Limbaugh his idol could have a sidekick named "Turd," supports Jerry Springer and works for a radio station that plays Marilyn Manson, Nine Inch Nails and Limp Bizkit? I thought conservatives were supposed to be "family-friendly."

What is particularly horrifying is that they are not challenging the results. They are doing something much worse. They are demanding that Palm Beach County *NOT* hand recount its ballots. For some reason.

This guy wants to be President? And is acting like the President-elect already? And is going to court to tell Palm Beach County to NOT ascertain the winner?

And describes some "urgency" to get on with things, even though the Electoral College doesn't convene for FIVE DAMN WEEKS?

Fortunately, the judge issued the ruling against them. Sort of. The ruling was "I'll consider an injunction. Monday morning." The recount continues in the interim.

The reason is that hand counting statistically improves the vote totals
but makes less reliable the vote total differences. That is, it's worse
at correctly picking the winner. That's why they use machine counting
in the first place.

Punch card counting reduces everybody's totals by about 5% universally.

1. If you hand count a Democratic district, you pick up those rejected votes for
Gore at a higher rate than for Bush; the reverse in a Republican district.
So if you hand count anywhere, you have to hand count everywhere.

2. But, with hand counting, the winner is not so well picked, owing to
biases in the person counting. The machine is coldly objective, favoring
neither side. That's why it's agreed to ahead of time.

3. Since you get a different answer with another counting method, with
not necessarily the same winner, the loser who gets hand counting to
replace the machine vote IN THE ABSENCE OF FRAUD has a doubled chance of
winning. That's why they want to do it.

Absolutely correct. So what's the problem with that? I realize "Florida law"
dictates that they have to certify by Tuesday, but that can be stayed by a court
order.
Why not hand-count the whole state?

If you have a bi-partisan counting committee, it shouldn't be a problem.

You're assuming that hand-counting will be crooked. I disagree.

>
> 3. Since you get a different answer with another counting method, with

Again, you're assuming that the result will be different with hand counting. The
vote total may not exactly match, due to human error in hand-counting OR mechanical
error in mechanical counting. But I certainly would trust a bi-partisan counting
committee a lot more than an old punch-card machine.

In fact, you don't see punch cards in use in my field (data processing) very much
anymore. They've been gone, for the most part, for around 15 years. Why? The same

problems -- chad not dropping out, improper punches, or the card has been "bent, folded, spindled or mutiliated". And, if the machine jams (and they do), the card/ballot can be destroyed and the ballot can be lost.

I can remember working in operations for an insurance company. Once a month, we fed the punch cards (from bills paid by customers) into a card reader. They would be loaded onto a file and sorted, etc. then payments were applied to the accounts.

One bozo used to put a political sticker on the back of his bill. It jammed the machine and destroyed his card and several others around it. If we could read the cards visually (is that a hand count?) we could reproduce them and feed them through on a second run. But unfortunately, some were damaged beyond repair and a few customers would not have their accounts credited, and they'd eventually be called to verify that they had paid their bills (please bring the cancelled check).

If cards are used today, they are usually something scannable. Their elimination led to the end of a lot of computer nightmares.

We had an election in Massachusetts - Congressman Delahunt "lost" the Democratic primary in 1994 - but it was overturned because the punch card ballots were so flawed that the Mass supreme court justices counted the ballots by hand and certified him the winner.

There was no fraud involved. It was a mechanical error. Not all of the ballots punched through.

It isn't so much the "counting method". It's the accuracy of the result I'm concerned about. If a machine count is only accurate to + or - 5 percent, I'd rather see them go to a hand count.

Which, by the way, is why punch-card ballots are illegal in Massachusetts now.

You can watch the story on the CNN website.

You're wasting your energy. This is the singular topic of broadcast media. Anyway, people may prefer the insight and analysis of those they know and respect rather than the vituperation of strangers. In local weekly newspapers this week you'll be reading the comments of local leaders and ordinary folk on *this* matter. In divorce newsgroups you'll be reading about Bush and Gore through the lens of gender relations. It's called localism and it's supposed to be a defining principle of broadcasting.

There is really not much point in discussing this issue here.. it is being beaten to death already.
Besides, I could have told you who would reply and what their positions would be last Wednesday.
The Gore supporters are going to recount and recount and recount until they finally win, and anything else will be a travesty where the will of the people has been subverted by the wicked left...
The Bush supporters believe they won the original tally and the recount, and will do anything to stop further action that will jeopardize or cost them the Oval Office. They are scared to death that the vote in Florida will be overturned (which it will) and we will have 4 more years of Clinton/Gore/Lieberman.
The real truth here is, "the will of the people", "the letter of the law" and "our country's best interest" has nothing to do with it.. It is politics, plain and simple.
If you are a Bush supported, you want the counting stopped (or expanded) and if you are a Gore supporter, you want human minds to try to figure out those 19,000 ballots so the intent of the mainly-democrat voter is decided.
Are there any Democrats out there who want Gore to give it up in the nation's best interest?
Are there and Republican's out there willing to concede that in all likelihood, several thousand votes (for Gore) didn't get scored in his column over a technicality?
I would love to state my position on this forum, but those of you who know me, already know what my position would be and it would be very biased.
Finally.. Greg & Joan... I would have had you painted in Nader's corner :-)...

An accurate analysis of what's going on is what is wanted. If a Democrat says ``votes have not been counted'' to the press, he's thinking of getting an advantage over Republican counties that do not hand-count, not worrying about overlooked votes. Punch machines skip 5% off the top and it's known.

If a Republican wants to stop a fair hand count, he's afraid that a different tally with different mistakes will come up for Gore.

If the media translated the reasoning, all would be fine. The hype would no longer work, and everybody could enjoy it as an amusement and circus, like the OJ trial.

You couldn't be more wrong. This discussion goes to strategy and tactics, not to whom anyone voted for. Plenty of Bush supporters are now cursing the strategic blunders of their own team. Those who condemned Gore for the possibility of his litigating the election are out on a limb as Bush becomes the only candidate actually litigating it. Gore's team made the statutory deadline for requesting the manual recount in their counties, while Bush's team missed the deadline for a manual recount in theirs.

While Bush supporters were railing at Democratic incompetence both in the design of the Palm Beach ballot and the response of the voters, Gore's team was making the probably winning moves on an entirely different front. Bush's supporters are left with their hand on their pecker, lamenting vaguely that Gore's campaign leader is a guy named Daley and he stole the election. Or Bush's people will have to litigate every vote. Or even worse, use the delaying power of a court to force Palm Beach to miss a certification deadline and thereby throw the election to their man, probably at the cost of Jeb's political career.

For Republicans to acknowledge that the Palm Beach ballots were appallingly designed and that Gore supporters likely voted Buchanan or twice is a concession that costs them nothing. A Democrat who calls upon Gore to concede for the good of the country is a Democrat who believes that Bush can't win without a Gore concession. With the shoe soon to be on the other foot, I think you'll soon find that Democrats couldn't care less whether Bush concedes because they'll have the goods in the electoral college. Republicans would have been delighted at Gore's refusal to concede if they had ever really had the goods.

Tell me whom I voted for if you think you know.

Jerome

4691. Mobile Audio - Alpine or Sony?

Newsgroup: rec.radio.broadcasting
Date: 2000-11-12 00:00:00 UTC
From: kc1ih@mediaone.net
Message-ID: <t0u0ss2pe3h7a3@news.supernews.com>
Source record: 16947
Cross-posted to: alt.radio.broadcasting,rec.radio.broadcasting

I know this might be a bit off subject for this newsgroup, since I'm asking about radio equipment rather than radio stations. But, I felt the group of people here would be able to give me a good perspective on the topic, so I'm gonna go with it.

I'm considering replacing the stock (Clarion C-116) radio in my 2001 Subaru Impreza with an after market radio, with the main purpose being to improve radio reception. Most of the stores I've visited have sent me in the direction of Alpine saying that they have the best radio reception.

However, when looking at several web sites, it appears that the Alpine radios have an FM mono sensitivity of 9.3 dbf, whereas the Sony units are listed at 8.0 dbf, with the lower number being better. No figures for AM reception were given. It seems that the numbers are the same across each company's product line, apparently they use the same tuner in all of their models.

I realize that these figures come from the manufacturers, and may be exagerated. I'm wondering if anyone reading this has any real world experience with these radios, and can give me some advice based on your own experience.

If you refer to specific models, keep in mind that I am looking for a unit with a cassette player rather than a CD player, and looking to spend $250 or less.

Thanks for your help.

Thomas Edison describes in his patent application for the wireless telegraph in May of 1885 as follows;
For receiving signals I locate in said circuit between condensing surface and the ground a diaphragm sounder which is preferably one of my electro motograph telephone receivers.

The first wireless telegraph picked up the telegraph signals with a loud speaking telephone. De Forest patented his triode in 1907 twenty two years later. For his first radio he used an Edison loud speaking telephone.

Edison's Patent and an essay about wireless transmission can be seen on my site at www.geocities.com/starapex Click on the radio

I used to live in Kitchener. If the station the original poster heard was CKKW, the following might help recognize it:

You probably won't hear an actual ID -- just "Oldies Ten Ninety".

Some geographical references: Kitchener, Waterloo, Cambridge (the local cities); "K-W" (Kitchener-Waterloo); "Twin Cities" (Kitchener and Waterloo); "Tri-Cities" (Kitchener, Waterloo, and Cambridge); "Waterloo Region" (county).

Streets and highways: "Victoria North" (Victoria St. North, where a lot of stores are); "the 7 and 8" (Highway 7/8); "the 401" (major east-west expressway that goes to Toronto); "O.P.P." (Ontario Provincial Police -- similar to a state police or highway patrol).

Stores: prices will be quoted with volumes in millilitres ("mills") or litres; weights in grams or kilos. Some store ads may quote weights (meat, etc.) in both kilos and pounds.

Weather reports: "Environment Canada" (nationwide weather bureau); temperatures in Celsius (current temperatures in K-W are ranging from a high of about 10C to a low of about -2C).

Ah, remember the old days when you wound your own carts and replaced the
pads yourself? A dab of DuPont and you were good to go. *grin*
Plus you could make custom lengths, great for continuous play backgrounds.

4697. Pacifica in NYC

Newsgroup: rec.radio.broadcasting
Date: 2000-11-13 00:00:00 UTC
From: CA was in NJ <REPLY-TO_cainnj-at-mailandnews.com_____@skywave.yi.org>
Message-ID: <sjgv0tkjmogmlo05majrt5vg2isht4vpfn@4ax.com>
Source record: 16856

There's a post on the Mid-Atlantic Radio Board (http://radio-info.com/ma/index.shtml) that makes me wonder. The question was about when NYC would get an all 80's station. Response #3 was "3: When a freaky noncomm organization based east of the bay in San Fransisco finally wakes up and realises that it isn't 1967 anymore and mercifully sells their commerical licences in New York (yes, EITHER of them)." I'm going to have to guess that it's Pacifica that he's talking about. I know they own WBAI/99.5 but what else do they have? According to their website, the only other station in the commercial band even remotely near NYC that carries their programming is W233AH at 94.5 (translator for WJFF/90.5), but they aren't owned by Pacifica.

Channel 13 made a 30 min .ram file and VCR about his battle with cancer. If you do a web search, you should find it. Or contact Channel 13. He apparently was there from 1993 to 2000. The tribute mentioned that he worked across some river? Must have been the James.

I worked at WRVA as a second job from 1968 to 1970 when I was drafted into the Army - Fort Lee (Petersburg/Hopewell). So I know about the James, as WRVA's xmtr site is located at Deep Bottom where Grant would cross the James to harass Richmond.

Let me see if I understand this. A broadcasting newsgroup is being
asked not to discuss one of the most significant news events in the
nation's history. What's wrong with this picture?

>conservatives were supposed to be "family-friendly."

I think you're confusing real conservatism with contemporary
conservatism. My understanding of real conservatism includes none of
the "family values" baggage that contemporary conservatism hangs its
hat on.

Real conservatism, as I understand it, sticks to keeping the
government out of our pants, pockets, homes, etc. Contemporary
conservatism incorporates Jerry Fallwel, Jimmy Swaggart and the very
people who would involve the government in the "moral" policing of the
lives of those who don't adhere to their beliefs.

I think Mancow's claim to be a "true conservative" makes sense. A true
conservative would let this stuff happen and let the marketplace make
the decision and keep the government out of determining what's
"moral," in good taste and proper.

I don't see much difference between liberals and contemporary
consevatives.

Ron;

Actually there are some of us out here looking at this with the bemusement we had over the OJ mess.

Truth of the matter? There is a bigger, more important story here that nobody has stumbled across yet, and it has nothing to do with vote counts.

Not "EITHER of them" with regard to licenses owned by Pacifica -- "EITHER
of them" in reference to freaky noncomm organizations based east of
the bay in San Francisco...the other being Family Radio and WFME 94.7.
At least, that was my read of the post :-)

> in Chicago,
> the #3 radio market.

First of all, to avoid any confusion, the *real* WXRT at 93.1 FM is staying right where it is. WXRT-AM were interim calls after WSCR was moved from 1160 to WMAQ's old 670 (where they seem to be pulling the same weak numbers they pulled at 1160). WXRT-AM did simulcast WXRT-FM, for the most part (with some brokered programming and infomericals interrupting--that's our boy Mel!).

Now that Salem's taking over 1160 AM, anyone wanna bet that the talk programming and religious "teaching" shows they're currently airing on WYLL will be moved to 1160 (along with some of Salem's other shows, like noted perjurer Oliver North)? With those shows off of 106.7 FM, the way should be cleared for what I believe would be the first 24-hour commercial CCM station in the Chicago market ever.

I would think that Jason Bereza, the webmaster of the Mid-Atlantic Radio Page, would know better, but he may be mixing up WNYC at 93.9 as Pacifica. As most people know, that station's the former city-owned classical/NPR news-talk station (and becoming less classical and more NPR news-talk, to the chagrin of a lot of long-time listeners who've been complaining on the station's web site message boards--one poster threatening to file a class action suit to return the station to its old format!). Basically, they feel that the classical music that's played currently is too much like WQXR and most classical stations (i.e., "lite" classical), they don't like Jonathan Schwartz doing an adult standards show on weekend afternoons, despite the fact that there is still no 24-hour adult standards station in the market since WQEW flipped to Radio Disney, and they don't like a lot of the weekend programming, considering it "fluff" and "serving no purpose." They especially hate the station's recent attempts at younger-skewing pop-culture-oriented shows for a national audience like "Satellite Sisters" and "The Next Big Thing."

In a way, I'd love to see the station get sold and flip to an 80s oldies format just to see these senile old elitist snobs get *really* POed.

>>

My bet is on religious talk.

Checkout the day and night patterns of this station.

Effective power days is 100,200 watts towards the Southeast.

Effective power nights is 15,500 towards the East-southeast.

From the Des Plaines Tx site, Chicago is in direct line towards service to all
of Indiana.

I'm sure this station, whatever its ultimate call, will find numerous listeners
in Chicago and its South, Southeast and East suburbs, including Indiana.

Look for a facilities change to the night pattern sometime soon.

My $0.02 worth, but perhaps worth only $0.01 right now.

I bet those Eastern suburbs of Chicago have a real problem with damp basements!

> Look for a facilities change to the night pattern sometime soon.

What do you expect the changes to be? When WJJD first built the night
array, they ran more power, but received complaints and had to cut back.
I'm not sure if the complaints were from KSL or someone else, do you
know? What has changed to allow a facilities upgrade at this point, or do
you expect a whole new night array will be built providing greater
protection.

>not depend on Al Gore's personal sense of statesmanship.

However, isn't a bit late for the Gore camp to be crying fowl here?
The "Butterfly Ballot" was, after all:
Designed by a Democrat (Theresa LaPore)
Approved by BOTH parties.
And a sample ballot was published in the local newspaper.

What more do you want?
Jessie Jackson, who as usual, sticks his nose wherever is doesn't belong, is
whining and crying about the type of ballot. Maybe they should re-count the
ballots in Cook County, Illinois where Jessie Jackson Jr. won. The used a
similar "Butterfly Ballot"
In 1996, some 15,000 ballots were thrown out in that same county for being
double punched. Not one word was said. Oh that's right Bill Clinton won that
election. It all depends on just who's ox is being "Gored".
And isn't it interesting that Gov. Jeb Bush recused himself of all doings
with the recount because of a conflict of interest, yet Florida's Atty General
- who was Gore's Campaign Mgr in Florida - is heading up the recount. I'm sure
there's no
conflict there...

Or it might be 1960 all over again.

Florida state law states CLEARLY that the election MUST be certified
by 5:00 PM tomorrow, Tuesday, November 14th. That is the law in
Florida.

BUT, since the Democrats didn't win, we throw Florida law out the
window, right?

Lets change the law to suit us until we get the result we want.
Typical democrats.

Not to mention the cigarette hand outs in Milwaukee for Democratic
votes, or students voting 3 and 4 times, and on and...

The entire system is corrupt.

>dictates that they have to certify by Tuesday, but that can be stayed by a court
>order.
>Why not hand-count the whole state?
>

Why not hand-count the entire country?

Why not throw out federal law and get stays for those laws as well?

While we are at it, why not get a STAY on the constitution , even
better, throw that out as well too....

If we actually took a real close look, state by state as to what
REALLY went on during this election, we would find things from BOTH
camps that would make our heads spin.

This fiasco has better be a wake up call for this country....

I must confess that the discussion of this issue here is much more
enlightening, and much calmer, than in the other groups. I hope it stays that
way.

The Florida Secretary of State actually has full power to extend that deadline, just not to reduce it. But why should she, as a Bush supporter? This is hardball. Forget about the butterfly ballot. Nobody will ever know who really won Florida on an accurate count of valid ballots.

This election was close enough to fall within the margin of hanging chad, mechanical inaccuracy, legitimate official discretion, sour grapes and crumbled cookies. The presidency has already passed within the decision-making power of individuals. Either Democratic Palm Beach election board official had the power to deny Gore the presidency. Yesterday's federal judge and today's state judge also do. This afternoon it may be Florida's Secy of State. A Democratic Secy would have extended the deadline and would have also been well within her rights. But guess what...Florida elected a Republican governor and state administration, and that's democracy too. Deadlines are part of the necessary mechanism for closure. If an official has discretion but no obligation to extend a deadline, and chooses not to do so, Bush has won it clean.

Usually, Rich, you're right on target. Maybe I misunderstood you. I thought this was a broadcasting newsgroup. So, the broadcasting of the Bush-Gore issues and the coverage those ideas thereof are okay on this newsgroup. Otherwise, Garrett may have a point here. Some of this discussion is turning more political in nature than broadcasting and the coverage of the political scene.

If discussion of politics is fine, then we need to extend this newsgroup to other types of discussion, don't you think?

Think of it more as a group united by a common interest in radio broadcasting, offering a particular perspective on the iconic story of our era. Just as they're properly doing in gender newsgroups, economics newsgroups, law newsgroups and probably Bolivian tourism newsgroups. This group is not rec.radio.broadcasting.tech -- if it were you'd be quite right -- and the story is so big, so universally illustrative, that an amendment to Godwin's law will likely be forthcoming in a futile attempt to contain its discussion.

No matter who approved what, my understanding is that the Florida law requires candidates' names to appear on the left side of the ballot. The fact that no one seemed aware of that should make no difference. Why should we accept an election process that clearly is flawed, regardless of who ultimately wins.

I would think that both candidates would want a clear victory so as not to have to deal with claims that their presidency isn't completely kosher. As it is, whoever wins has no mandate to do anything and can lay claim to being only the slightly lesser evil than his opponent.

>- who was Gore's Campaign Mgr in Florida - is heading up the recount. I'm sure
>there's no >conflict there...

Nor is there a conflict with the Florida Secretary of State, Katherine Harris, making the ballot count decisions. Harris was Co-Chairwoman of Bush's Florida campaign. Neither side is very pure in this mess. To my mind, taking a legal technicality (over which she has some discretionary authority) to stop a count is far worse than risking a hand count with all sorts of fraud prevention precautions in place. It seems to me she's desperately afraid Gore might win fair and square. We can't have that, so let's short-circuit the process.

Maybe Florida's Governor, Secretary of State and Attorney General should all take a short vacation and let others not so tainted by conflicts of interest run this process.

If thehis were Denmark, the fish would be smelling pretty rotten by now.

The law in Florida also says the Butterfly Ballot was illegal. Legal scholars say that the certification date can be changed in the event of highly unusual circumstances. What if there had been a hurricane? Or voting machines broke down. The date would have to be changed. The law, as all laws do, has wriggle room when unusual circumstances occur. The law has a spirit as well as a letter. The key here is to find out what the voters intendded, not what politicians need for their own self interest.

I realize politicians don't have to care what voters think, but it seems the height of stupidity not to use that discretion in a case like this. Bush wouldn't "win it clean." The only way for either candidate to do that is to count the ballots, not arbitrarily stop the count because your candidate enjoys a razor-thin lead.

There's such a feel of conflict of interest in this whole thing I would think they'd go out of their way to ensure the winning candidate had really won on the vote, not on a legal technicality.

It's already bad enough that neither candidate will win decisively. The outcome of all this will be a good one in the sense that the intense partisan politics won't work anymore. No one has even the slightest mandate.

I think the voters are saying "we really don't care who wins, just don't let him screw things up too badly."

No, stupidity is one thing it surely isn't. Dubya loses no
more prestige by winning within the lawful discretion of local
officials than he has already lost by being Rutherford B. Hayes
(who, by the way, I once heard Clinton describe on CSPAN as an
excellent, underappreciated President who did the nation a lot of
good.) Dems are going to use this election to angrily mobilize
on voter rights, voter comprehension training, voter turnout
management regardless of how...or even whether...Dubya slips in.

Meanwhile, with the country supposedly so evenly divided, he
gets Republican national and state legislatures, courts,
governors, court choices, administrative choices, pork choices.
And he simply says to the nation..."I know this victory was close
and a lot of you supported my opponent. But there's no way I can
serve you by being half a president. I'm going to push forward
with what I believe in, show you that it works, and thereby try
to earn your support in 2004."

I don't think voters in NY, California, Texas or even
Illinois came away with that impression. Voters in the big
electoral states were either tagged and bagged or ignored as a
loss. Campaign time and money was concentrated on swing voters
in swing states. It's the same statistical principle we talk
about in regards to hit programming on radio, but has similar
pitfalls, a loss of interest and passion.

Owners of small bookstores typically discover that 20% of the
titles generate 80% of the sales. They dream sugerplum dreams of
dropping 80% of their titles and still attaining 80% of their
sales...and discover that they're history. The 80% of titles
drew loyalty and foot traffic, created at least a possibility
that a bookbuyer could have a rewarding shopping experience
locally rather than go for cheaper bestsellers and greater
variety at the megastore.

People here argue vehemently about what effect the repeated
playing of a handful of hits...or a handful of spots...has on
listener sensibilities. I leave that argument to those who
actually make book, but there's little doubt that behaviors that
enhance a station's revenues and competitive edge in any given
quarter can ultimately reduce "voter turnout" for radio.

anyone of
> the legality of the ballots....

The legality of the butterfly ballots has been off the Dem's table for days. For the record, it's paper ballots that must have the candidates in gubernatorial-return order, with the check-box on the right. Punch card ballots, while certainly not made of cream cheese, are required to follow the rules for paper ballots, "to the extent practicable"...a loophole the size of the Lincoln Tunnel.

The voters of Palm Beach County were arguably denied a lawful voting experience, and there's not a thing anyone can do about it. A revote would be Gore's worst nightmare; with a subset of last Tuesday's voters voting, he could never again attain his huge plurality.

The argument today is over ballots that have been 100% perforated in the name of a particular candidate, but which were not counted because a piece of cardboard continued to hang on and block the optical sensor. Both Bush and Gore have gained votes as these ballots have been hand counted.

Kathy Harris may well be able to declare Bush the victor in Florida in the face of county submitted totals that give Gore more votes. His presidency will have reduced legitimacy, but still be extremely powerful. Gore can only be a weak duck, with nothing but a veto pen.

On what do you base this. The Electoral College was approved and used since 1789, pretty on in the formation of the US government, if my memory serves me correctly. But, I wasn't around back then, so I don't know first hand. I can only go by what the Founding Fathers decided then.

'None of the above' was written in on my ballot, for the office of President for the first time in 28 years. I refused to vote for people I don't feel competent to change a baby's diaper, let alone run the country. I don't see how you feel any of the things you mentioned in the last paragraph will bring in new blood. As long as the same "Old Farts" and "Hard Line Party Members", in either party, control the parties, they will not allow "New Blood" unless they are towing the party line. Those who do not will never get the adequate support get elected. Dubya was chose before the first vote Bob Dole was cast 4 years ago. I remember hearing on election night, when he'd only been in politics for 6 years, that he was "The" rising star in the Republican party. What a joke!

If that were the case, somebody had to know this. Either the Gore Camp,
Bush Camp, or SOMEBODY who reads the papers had to see this. Especially with
the fact that some 15,000 ballots were tossed out in the last presidential
election for "double punching" using the same ballot.
It's a little late in the game to cry "foul".
And since it (the Butterfly Ballot) was used previously, that would
constitute a legal precedent.

Bullcrap, Rich!
If that were the case, they should have done something about it BEFORE the
election, not cry about it afterward. They had plenty of chances.
It was also used in previous elections, so a precedent was set.
Please cite the law and case law surrounding it, or get better legal
sources.
This multiple recount nonsense is beginning to remind me of the U.S.A. -
U.S.S.R. basketball game in the 1972 Olympics, where the final 2-3 seconds were
re-played several times before the U.S.S.R. finally scored a basket and "won".
Funny that the Democrats are in the same plight as was the 1972 Soviet
basketball team. Not to mention similar ideology.

The fact that something is illegal does not mean that it can't be continued. The Butterfly ballot in fact was used for the first time in this election. There would be no need to list numerous candidates in the same manner in a primary election. Until something illegal is challenged, it's presumed to be legal as a ballot apparently in Florida.

I suggest you look at Florida Title IX, Chapter 101, Section 191 and Florida Title IX, Chapter 101, Section 5609, before you make this statement. Please note that both are required because section 5609 references the requirement for paper ballots which do require placement to the right of the candidate's name.

> This multiple recount nonsense is beginning to remind me of the U.S.A. - >U.S.S.R. basketball game in the 1972 Olympics, where the final 2-3 seconds >were

Your ideology is showing. Not only is it showing, but it shows a great deal of similarity to the the Soviet thinking exemplified by Lysenko, where the facts get mangled to fit the theory rather than the other way around. Of course, there used to be a lot of folks who pointed out that those to the far right and far left shared a similar tendency to impose their beliefs and values on others, and the results of either gaining ascendancy often could not be distinguished from the other gaining ascendancy in the long run.

Since this newsgroup is supposed to discuss broadcasting, perhaps instead you'ld care to discuss just how balanced the news coverage is of the present fiasco, or how polling might change the number of folks voting.

Nope. Illegal because, according to my legal sources, all the names must be placed on the left side of the ballot. Just because a group of people approved it doesn't change the law. At this point everyone wishes there had been no butterfly ballot - on both sides.

Source record: 16898

Florida law states clearly that the candidates names should be listed in order of their party's finish in the last election for governor with the punch block representing a vote for that candidate appearing to the right of his name. In this case the names on the ballot should have read Bush, Gore, Buchanan with all of the punch blocks to the right. The butterfly ballot is clearly illegal regardless of who designed it or signed off on it or didn't complain about it. Problems are: 1) No citizen has formally petitioned a court for redress on the matter and 2) if a court were to rule on the matter it would mean that all of the ballots in all counties would have to be set aside, meaning that nobody's vote would count! It is unclear as to whether those citizens in counties effected would be given the opportunity to revote or not. It is also not clear as to whether the counties involved could then petition the Florida courts to prevent the seating of electors to the Electoral College in the state.

I downloaded a newer version of RealAudio and was finally able to copy the .ram streaming video without my Mac conking out. The river that was mentioned on the video was the Elizabeth, not the James. I found out from the channel 13 video that Terry served as a naval officer in 1968, was stationed out of Hampton Roads, had two deployments aboard an aircraft carrier, and returned there immediately afterwards. That would have placed him in tidewater VA from about 1972 to 2000. He won a national-best broadcasting award in something back in 1984. He also was a lifelong Green Bay Packers fan...

So we both were in the military at the same time in VA, me in the Piedmont/upper tidewater and him over to the east by the Atlantic. I wish I knew that at the time, as I always carried a pass that would allow me to travel anytime within 400 miles of Fort Lee.

4750. To World Music Programmers

Newsgroup: rec.radio.broadcasting
Date: 2000-11-15 05:34:55 UTC
From: The Batish Institute <batish@cruzio.com>
Message-ID: <8ut6oc0sdb@enews3.newsguy.com>
Source record: 16893

To all Radio DJs programming Indian music

I am about to send out copies of the 72 Carnatic Melakartas CD to US, Canada, and Overseas radio stations. If you are interested in receiving these for airplay now is the time to let me know :) If you've not received any promo CDs from me in the past you are not on my list ..... so please get in touch.

You can email back at batish@cruzio.com or

call 1-800-RAG-MALA (US only)
Call (831) 423-1699
FAX (831) 423-5172

The music is by Pandit S. D. Batish (http://batish.com/sd/), and is a treasure to have. It is very traditional although in India it would be regarded as a fusion as it brings together the ancient ragas of the Carnatic tradition and the musical composing and singing style of North India particularly the highly ornate Panjabi Ang (singing style) that Panditji is well known and respected for.

There are 72 parent modes in the Carnatic music system. They are called Melakartas. This first CD is volume one and covers the first 12 Melakartas. It will be followed by five more CDs, 12 Melakartas each, completing this prestigious work. The rest of the CDs are presently being mixed for release.

I hope to hear from you soon,
Sandra Batish

Nah. If Gore were ahead by 300 votes, Bush would be doing exactly the same thing. After all, it was Bush who took the first step, in court, to make this a legal issue. I very, very seriously doubt Bush would have said "Gore is ahead by 300 votes, give the election to him. I'll bow out, gracefully, and let the Democrats have the White House.

Politics just doesn't work that way when the Presidency is at stake. Don't forget, the popular vote went to Gore by a couple of hundred thousands votes. Ask yourself who the voters found to be the lesser of the evils. The Florida mess is just a technicality because of the Electoral College. Gore wins by 200,000 actual votes. Bush wins by 300 votes in an important electoral vote state.

It's an interesting system that can give the White House to the loser. The parties want the White House. They don't give a damn how they get it.

Watch any of the major networks or the cable networks. Many legal scholars declared the butterfly ballot illegal. To them, the law was clear - all names must be on the left and the punch holds on the right. There have been several pieces that have stated the specific section of Florida law. I don't think a violation of a law that isn't prosecuted provides precedent that the law can be violated in all cases because one got away.

It was stupid that no one involved in its design had the common sense to do some legal research to make sure it met all legal requirements.

If they had done that we'd have a president by now.

There would be just as much screaming if the vote had gone the other way, it would just be coming from the mouths of the Bush puppets rather than the Gore puppets. Nobody is above (or below) muddying themselves in this mess. If you haven't figured that out by now, then you run the risk of missing one of the key lessons of this entire exercise.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

You know what I think?

Many expressions have become part of the American lexicon.

You've heard about "taking the fall" or "a fall guy" -- the "fall" expression came not from falling down or going down, but during the illustrious administration of another Republican - Warren G. Harding. Albert Fall was the Secretary of the Interior and was set up to take the blame for the Teapot Dome scandal. The setup was so obvious that "Taking the Fall" and "Fall Guy" became a common expression - and remains so today.

Look for "Florida election" and "Katherine Harris" to acquire similar status in our jargon and remain so for decades.

4760. new age broadcasting in Europe

Newsgroup: rec.radio.broadcasting
Date: 2000-11-17 00:00:00 UTC
From: Ronald Boortman <boortman@bart.nl>
Message-ID: <fBBQ5.632$3k.4848@typhoon.bart.nl>
Source record: 16766

Please let me introduce myself.

My name is Ronald Boortman. I am 41 years old. From 1980 I am devoted to various kinds of MUSIC activities. On regular basis from 1989 I promote, broadcast and popularize various kinds of NEW AGE, AMBIENT & ELECTRONIC MUSIC.

I am working for the Radio Network D.V.N. a Dutch Broadcasting Organization. Recently I have run and produced the following projects related to these kinds of music:

1. "Live" radio show "RELAXATION" at Saturday every week from 20:00 till 22:00 on cable network of Rotterdam. More then 400.000 family's are connected to this cable network.

The name RELAXATION doesn't mean the primitive mention to sleep ore be boring. In this radio show I'm trying to create a special atmosphere of smooth moods, which one can bring spiritual emotions. You can listen to very different kinds of music: from piano / guitar solo works till Ambient amorphous noises, and gentle sounds of Cosmic Music. I'm trying to create Another Reality and Another Conception of SOUND.

2. Editing html page's on the internet concerning New Age, Ambient and Electronic music. Have a look at http://radioDVN.mypage.org

3. I'm a member of KLEM magazine, (Kontaktmagazine Likers Electronic Music.) the biggest organization for electronic musicians in Holland. A great part of the cd's that are reviewed in this magazine are played in my program.

4. I work closely with OREADE MUSIC BV Heemstede. The biggest music importer and distributor for New Age and Natural Music in the Netherlands. All there products are in stock for my program.

I would be glad to cooperate with YOU and I am interested to represent YOU and YOUR MUSIC in all my activities. I am always interested to discover / to broadcast The New sound's Sculptures and Soundscapes; My activities doesn't means just "promotion". First of all this is an unique possibility to present Music and Artists from Unknown Territories from the World. I would show deeply appreciation to YOU for kind support and friendly help with any of YOUR CD's ore information material.

A short notice regarding play lists of my radio shows:
As I could learn, people and companies have use very different software and computer systems. It seems too difficult to send my play lists to everybody by mail. Thus I have opened my web site with regular last play lists of current radio shows.

http://radioDVN.mypage.org

I have some friendly / musically / business contacts all over the world with various well known and independent musicians and labels. All CD's which will appear on Radio is only with agreement and kind legal permissions of artists / labels. We can use: for radio broadcasting CD's , DAT-tapes, and MiniDisc.
Please be so kind to write on the outside of the packet ; FOR PROMOTION ONLY NOT FOR RESALE.
(other wish I will be asked to pay taxes)

My postal address
RONALD BOORTMAN
D.V.N. BROADCASTING ORGANISATION
P.O. Box 33227
ROTTERDAM 3005 EE

LPB sells a program called Web Jockey that is suitable for student radio stations. I believe it costs $99.00 from www.lpbinc.com

It is not as versatile as some more expensive programs but it may suit your needs.

Message-ID: <6bxR5.10$i16.1083@news1.mts.net>
Source record: 16770

Hello All:

I am in the process of negotiating a lease to place a two bay circular polarized FM broadcast antenna on the roof of a building which is 450 feet high in the centre of the city and need your help in determining a fair monthly rental rate.

The station is an Adult Standards music format, aimed at persons aged 45+ and the transmitter will operate at 1 Kw. As with any new business, the first 3 years are very critical with respect to profitability.

I will not have exclusivity, and there will be no revenue competition for other services by adding highspeed Internet, paging services, trunk communications, etc.

I would appreciate your assistance in developing a formula to present to the building owners which is fair to both sides of the negotiation process.

Please reply either via the newsgroup, or direct email to lee@ckvn.com

Thank-you for the help.
Lee Smith

4764. Grateful listener remembers station in his will

Newsgroup: rec.radio.broadcasting
Date: 2000-11-18 00:00:00 UTC
From: familiacantu@cs.com
Message-ID: <20001118104033.12729.00000373@ng-ce1.news.cs.com>
Source record: 16771

I saw a very cool radio story from the NBC-TV station in Cincinnatti. It seems a former listener left WEBN a little more than $10,000 in his will. The listener had won $1,000 from WEBN about 25 years ago. He used the money to move out west and get a fresh start. And he was always grateful for that chance. He left the station the money and directed them to give other listeners that chance, so WEBN is giving the money away in $1,000 lumps (they rounded it off to 11 lumps.)

The listener also had a sense of humor. He left the station a tape explaining what he was doing. He had a nasty cough. The station runs the clip and asks listeners to call in when they hear him ''cough up the money.''

Digicarts are stand-alone, non computer based hard drive storage systems. It basically looks like a cart machine with a small display window for text, similar to what you might see on MiniDisc players.

We have the original Digicart where I work, but I'm not totally familiar with the II's. I seem to recall they may have ports for direct digital transfer of the audio files.

I would suggest calling 360 Systems and ask them.

To my CC pals: listen to http://trp.orn.com tonight Sat at 12 mid NYC.
Real Audio streaming.
ON SW:
Friday Evening At 10 PM Eastern on WBCQ 7.415 Mhz. Shortwave.
Program is rebroadcast on the internet immediately after the live show
concludes at 12 Midnight Eastern. Saturday At 12 Midnight Eastern on
WWCR 5.070 Mhz
Program is rebroadcast on the internet the following Sunday evening at
8 PM Eastern.

####### "The Committee to Un-Elect the President" #######

Dear Formally Sovereign Citizens of what was the United States of
America:
Already we have the knives of Brutus & pals glimmering in the shadows
!!!! What a conscience-less political whore veteran Republican Rep.
Connie Morella is! See what happens when a politician puts his finger
in the wind and does what he or she need to do to be re-elected rater
than what is right, just, moral and of good sense.
[She is a GOPer in a mostly Democratic District - see below]
Can't the GOP replace this broad by ejecting her from the GOP and
getting a loyalist to replace her? Someone....somewhere look that up.
I am going to look for her e-mail office address, but I expect only to
get a form "thank you" response of course with these types of
turn-coats. BTW--- PLEASE refer to the Gore criminal team and the
Demo-Donor Judges as

####### "The Committee to Un-Elect the President" #######

SWL: Tony Catalano - ww2w
---
http://www.townhall.com/columnists/robertnovak/rn20001118.shtml#
GOP DEFECTOR
If George W. Bush winds up as president, veteran Republican Rep.
Connie Morella can expect no favors from the White House. She intends
to vote for Al Gore in the unlikely event that a deadlocked Electoral
College throws the election to the House of Representatives, breaking
the 4-to-4 Republican-Democratic tie in the Maryland House delegation.

Bush campaign aides in Austin were incredulous when they read in
Wednesday's Baltimore Sun that Morella intended to vote for Gore
because her Washington suburban congressional district overwhelmingly
supported the vice president. A telephone call was made to Morella's
office, and the newspaper account was confirmed.
Morella usually wins easily in her heavily Democratic district, but on
Nov. 7 recorded a surprisingly low 53 percent. Her newly precarious
political situation wins her no sympathy from the Bush camp, however.
Gov. Bush's political aides promise a very cold shoulder from Bush if
he is elected president.

San Diego Radio Survey

Don Barrett is doing a radio survey about Los Angeles radio. Let's do one for San Diego radio.

Results will be published when I receive over 100 e-mails, so start sending in your
surveys right now at survey@davesfunstuff.com

1.When you get up in the morning, what radio station do you turn on?

2.Who do you think is the outstanding personality currently on the air in San Diego radio?

3.What format do you listen to most?

4.Which station do you tune to when you want up-to-the minute traffic news?

5.Which personality or station do you listen to most in morning drive (6-10 a.m.)?

6.Which personality or station do you listen to most in middays (10 a.m. - 3 p..m.)?

7.Which personality or station do you listen to most in afternoon drive (3 p.m. - 7 p.m.)?

8.Which personality or station do you listen to most in the evening (7 p.m. - midnight)?

9.Which personality or station do you listen to most during the all-night hours?

10.Overall, which Los Angels radio station do you feel is best programmed?

11.During the week, on the average, how many hours do you spend listening to the radio?

12.Over the weekend, on the average, how many hours do you spend listening to the radio?

Send them in anytime! I will be repeating this survey from time to time.

GELLER MEDIA INTERNATIONAL
NOVEMBER 2000 NEWSLETTER

Greetings.

It's been a fantastic autumn. The new book is out, the NAB in San Francisco was a delight (as was the Canadian Association of Broadcasters Meeting last week in Calgary) and now I'm looking forward to a bit of time in New York, working with clients here and having Thanksgiving.

To answer numerous inquiry emails: YES, the NAB does have the tape of the speech I did at the radio show "Small Market Big Sound, Creating Powerful Radio." You can order it from the NAB online or contact them in Washington DC.

THIS SHOW USED TO BE FUNNY

Are the listener complaints right?
Is radio in the United States losing audience because we are dull, predictable and uninspired? That is the talk both in the radio industry itself and out on the streets.

What exactly ARE they saying about us "out there?"
The following quotes are all from a research focus group of a dozen 25-54 male listeners.

"When I turn on the radio, I hear the same stuff on all the stationsI get tired of it fast."

"If I watch Jay Leno at night, glance at AOL, then skim USA Today, I've got the basics of what these guys are gonna talk about in the morning radio shows.

"Too many commercials crammed in there. And when the commercials are over the stuff they say isn't worth the wait."

"I heard nine minutes of commercials in one straight shot."

"It's inane. They talk about stupid stuff or stuff I've seen on Entertainment Tonight.
I've stopped listening to the radio in the morning and use the time either on the cell phone or listening to tapes."

"It's so boring, it's gotten to the point that if I don't like the song or get hooked into a part of a conversation immediately, I tune out."

This research took place in a top 5 market last month.

THE EXCUSES FROM THE INDUSTRY:

1) Consolidation is making radio dull. There's too little choice provided by the "big guys" controlling everything. Plus if you find you are now managing four stations, how can you even listen to what is on the air? Besides, if you cut costs you tend to cut from the "meat and muscle" as well as the "fat."

2) There's no talent out there because people have not had a chance to develop at the farm team level, because now there IS no farm team level.

3) PDs don't know how to find good people or have time to devote to working with individual shows or personalities on their airstaffs. Most of them are less than stellar at airchecking and talent development anyway.

4) Everyone is so focused on our new technology, toys and games from the internet, digital, satellite etc. that the focus is on delivery not on content.

5) Everyone good leaves and goes to T.V.

There's some truth to these "excuses," but they are not the whole picture.

There are dozens of ways to Create Powerful Radio even working with a tight budget and fewer resources.

The answer is work more creatively. Don't settle for mediocre.

Here is what we advise Geller Media International clients:

GELLER MEDIA INTERNATIONAL SOLUTIONS:

1) If your station is dull, have you asked lately: "What's in it for ME, the listener?"
How about: How have I served my public today? What have listeners gotten from us that they cannot get elsewhere on any other station, TV or radio, or the net or the newspaper?

2) Do we have the same content everyone else is using?

Why should somebody listen to us? Are we fun to be with? Are we making a huge extra effort not to waste one moment of radio air time? Are we putting information out there because it's on the front page of the paper but no one really cares? What kinds of different perspectives do we have on our air? What is different/unnique about how we present it? Is there any humor? Is there any original content?

Ask: What are we doing at the station to bring in fresh perspectives, humor and ideas?

3) Too Much Boring Clutter due to an overcrowded spot load?

Try taking a tip from NPR and have sales people try underwriting quarter hours with a one line sponsor instead of lengthier traditional commercials. Example: "This Commercial Free half hour brought to you by Home Stretch Cookies, Macys and Florsheim Shoes"

4) Boring DJs or Talk Hosts? Wordy and babbling newscasters?
Broadcasters need a fair amount of time to develop a relationship one-to-one with the listener. (That means at least a year on the air without pulling the plug)
That being said:
You can teach broadcasting, you cannot teach talent.
You can give someone permission to have fun but you cannot teach humor.
You can teach storytelling techniques, you can teach someone what elements to look for in selecting a good story.

Everyone should write shorter.

I DON'T CARE IF HE'S 300 LBS WEARS EARRINGS, DROOLS AND HIS SOCKS DON'T MATCH

Hire smarter. Give people a chance. Look for talent even when you are not "looking." Use your ears not your eyes. I cannot believe how many ads for air personalities ask for a photo. This is RADIO. A lot of people get the job because they look right, but sound average. Average is easy. Average is what everyone else has. Average is what the focus groups are finding boring. Take a risk. Look for people who are smart and fun. Interested in a lot of things. Good listeners. Weird is OK too. We've found a quirky weird looking person often doesn't even get a chance to audition.

5) How do we at Geller Media find breakthrough talent?

We talk about this extensively in the new book, THE POWERFUL RADIO WORKBOOK, but one way is to ask, during the interview process, for a prospective talent to tell you a story or joke three times in three different ways and to keep it interesting all three times. If they can do that, chances are he or she can work with material that doesn't change very much over the course of a day or a week and keep it interesting.

If putting an end to boring radio is on your agenda, now there is help available.
I hope you'll check out the NEW Book:
THE POWERFUL RADIO WORKBOOK: The Prep, Performance & Post Production Planning. This book focuses on helping managers, pds and air talent move up to the next level of performance. It's a paperback, filled with proven methods that WORK. It is available NOW from M Street Publications (800-248-4242 or 615-251-1525) or you can order from our web site www.gellermedia.com or through www.Amazon.com

And mark your calendar now for next October 20, 2001 for our 7th Annual Geller Media International PRODUCER'S WORKSHOP here in New York.

Next year's plans are quickly taking shape, however, as always there are "windows" available within this schedule if you would like to schedule some time together.
That's it for now. Remember: Keep it Powerful!
Sincerely,

Valerie Geller

This story sounds strangely similar to the ``Dead Man's Party'' radio
station contest that 99X was holding in Atlanta about a month ago
where some farmer/philanthropist gave some money to the station in his
will. If I recall correctly, the sound of his cough was your queue to
call in. And guess what song was used as bed music in the promos? :)

Oddly enough, the only info I could find on the contest is on the 99X
web site itself:

http://www.99x.com/new_morningx/deadmanparty.html
http://www.99x.com/new_morningx/obituary.html

Play 'em back and feed the analog audio into the PC.

DigiCart II uses Dolby AC-2 coding and a proprietary file format; your
PC probably uses MPEG or linear coding, so there's not likely any way
to transfer the files directly.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

Source record: 16784

Thanks, Fred. That was a nice touch. I had forgotten how distictive Trout's voice was. I appreciate the link.

BTW, ladies and gentlemen,I've recommended this book in the past, but do so again at this time with the passing of Trout:

The book is called "The Murrow Boys" and covers the life and times of the men and women who literally started broadcast journalism as we know it today. A wonderful book that does more than talk about the C.B.S. Radio coverage of WWII. It tells of the reporters' lives and the sometimes near-miraculous way they accomplished what they did to get the story out. I enjoyed it so much, I've read it twice through in the past three years. It is available at the local Barnes and Nobles here, but only in softcover.

A once-mighty station continues its slow death. KLIF in Dallas, doing some needed housecleaning, has rearranged its schedule. Sadly, the new moves are as boneheaded as the old lineup.

Tom Kamb, new afternoon talk show host, is hands down as awful as talk radio gets. He's had disastrous stints elsewhere. You just haven't heard bad radio until you check out this disaster.

Looks like KLIF may have a hard time even holding on to its pathetic 1.0 share in the market. Is it time to give up for good?

When was last time San Diego ever had three radio station format flips in a
single month that were not related to radio stations being sold, swapped, or
frequencies being shifted? I'm going to think this one out while I'm working
today.

Hi everyone, just learned that ProTools is offering a free 2 track
version of their editing software for PC&Mac at their website;
www.digidesign.com
The software requires 128meg RAM, but tested well even on my motherboard
soundcard & cheap PC stem mic. It's 10 meg, and documentation another
5.
This is not a clocked trial version. A real freebie keeper!
Great for production wannabees who want to learn to use the tool of the
trade.

I had an Escort of the first year of the mid-90s body style. I thought the radio had very adequate RF performance on FM. I don't think you can expect to do much better, although a manual switch to disable the stereo would help in fringe areas. I have over 40 years experience with car FM radios, so I think I'm a reasonable judge of what to expect.

AM was a different story. The ability to pull in weak stations was quite poor. I concluded that this was intentional in order to avoid having to further reduce the electrical noise made by various thingies in the car. The poor sensitivity also helped (a little) to reduce the bad overloading and intermod when driving by AM station transmitters. The radio didn't tune above 1610 kHz.

I now have a 1996 Escort, and the radio performs about the same. The FM RF performance is pretty good, and the AM is just so-so. It does tune all the way to the top of the expanded AM band, though.

Along the way I bought a Kenwood aftermarket KRC-605, partly chosen because the FM had RDS. Its AM performance is so bad that it makes the Ford radio look good, and I reinstalled the Ford radio nearly immediately. Really bad overload / intermod problems. Again the FM works pretty well, but whoever designed the RDS had no concept of how RDS is used in the USA. Once it associated call letters with a frequency (by an RDS signal), the radio kept displaying that call for that frequency even though you were hundreds of miles away listening to a non-RDS station on that channel. Stupid, stupid.

Another thing about the Ford radio in the present Escort. Both front loudspeakers were replaced under warranty since they both sounded like sandpaper within the warranty period. They are both bad again. The radio itself developed one bad audio channel and was replaced under warranty. The speakers are again so bad I can't tell whether the audio is going sour again.

Thanks to all who replied or at least read the post. I'm still open to further ideas.

I'm in the fringe area of 2 major markets, so I figured I might be able to boost the reception a bit. I agree totally that the speakers sound terrrible. I'm going to be replacing them, and I figured while fixing them I can maximise my reception potential.

If anyone has any more ideas, please DO repsond.

(Oh, is it NORMAL for the antenna to be able to be pulled out? Mine stays in but can easily be pulled out.)

They certainly have a killer signal. I heard them on the car radio last year while driving through Tulsa. I was coming from the north and at about Tulsa, they finally took the frequency from WNAX/Yankton, SD...which has a KILLER, killer signal!

You ABSOLUTELY POSITIVELY have to pull the antenna out to its full
length in oreder to be able to hear "anything" at any significant
distance.

OTOH, one way to reduce the overload on AM is to push the antenna
partway back in as you approach an AM transmitter site.

YES! If you can pull the extendible part of the antenna COMPLETELY OUT of the car, it is quite possible that it is not only mechanically broke (obviously), but electrically defective as well.

You can see for yourself by tuning into a DX station and listening with the antenna in, with the antenna out, and with the antenna removed. If you hear little or no difference, replace the antenna. I'd replace the antenna anyway as it is clearly broken. Its not worth considering any other solutions until you fix this one!

There are several other simple ways to test the antenna. You could short the exendible piece to ground (the car body). That should practically eliminate ALL reception. If it doesn't then that part of the "antenna" isn't connected properly to the receiver in the dashboard.

If you have a little handy meter, you could also measure the resistance (ohms) between the external part of the antenna and the center pin on the antenna cable where it plugs into the radio. This should be a very low resistance. Anything over around 100 ohms is suspect. Infinite resistance means that the cable (and/or the connections at either end) are broken. An inermediate value would indicate possible corrosion in the connection between the cable and the bottom of the antenna.

Likewise, you could measure the resistance between the center pin and the outside (shield). This should be very high (100,000 ohms aka. "100K ohms" or greater). If not, the cable may be shorted (or partially shorted).

Jason;

Simplest solution is to ditch the radio and the antenna. They were garbage the minute they left the
factory. You can find a more than useable AM/FM/cassette from Sony or Kenwood at a place like
Crutchfield.com for less than $100.

4796. Car radio problem, was Re: airwaves-digest V2000 #277

Newsgroup: rec.radio.broadcasting
Date: 2000-11-24 21:27:24 UTC
From: R J Carpenter <rcarpen@erols.com>
Message-ID: <3A1F074A.3907@erols.com>
Source record: 16802

The Kenwood KRC-605 I bought from Crutchfield for around $250 was considerably poorer that the OEM Ford radio in my Escort. I see no way to replace the Escort's door-post antenna without drilling holes that are likely to rust and leak.

I think the fellow's problem was that he didn't pull out the antenna, so it was down in the door-post and well shielded from any radio signals.

No sense throwing money at Crutchfield and defacing the car with an aftermarket antenna if the problem can be solved by merely pulling out the antenna - as I'm sure the owner's manual suggested.

Message-ID: <4433-3A204E72-19@storefull-258.iap.bryant.webtv.net>
Source record: 16808

It wasn't in the door post. It was extended. From the help I recieved,
I believe that the antenna's connection is most likely corroded and/or
broken. It gives me adequate FM reception, AM is so-so. FM reception is
about 55 or so miles maximum from a Class B station.

The antenna can be completely pulled out of the car, which as I'm told
shouldn't happen, so a connection is shot.

Thanks to all who helped.

A decent radio helps no end. My high end Sony minidisc unit can pull in a very good signal on all sorts of stations. Mind you, ensure that your aerial is also good, and your cars electrics are well suppressed.

>Great for production wannabees who want to learn to use the tool of the
>trade.
>-Modules

the thing is, it isn't necessarily the best tool of the trade for
radio production.....

I've had PT Free for about a month now....got it about a day after
digidesign released it....have played with it a bit....will go back to
it when i'm in the mood to play with it, but personally, for radio
production, I think it's overrated.

the main thing with radio production at a radio station level, is
speed...sometimes quick and dirty....so far PT for me isn't too
quick...but that could be the learning curve factor admittingly....as
i'm used to both cool edit pro and TripleDAT, which I prefer for radio
production, both are strong multitrack programs which you can work
with pretty fast, though triple has a bit of a learning curve, it's
got a great time shrink feature to shrink that 32 or 33 spot to 30
nicely.

PT is currently more of a standard for major market radio stations, TV
stations doing audio promos and production/agency houses then your
average radio stations...because it's usually too expensive. that may
change, who knows. it's good to know pro tools to a degree,
undeniably, but you also have to look at the program that gets the job
done well, and done fast.....which is why I prefer CEP or triple...for
now anyways.....

Out of Ottawa, CA, Eli on the Fringe is a trip! His show is similar to the Dan & Scott show, and in fact, they know each other. Eli is a free-for-all type, not for the kiddies.

He has a number of truly funny stunts he pulls while on the air: calling bars, whore houses, 7-11s, you name it. He also has a chat room up during his show and pulls material from there. You go to that chat, you'll wind up on the air sooner or later, LOL.

Also has a $500 contest during the show: for more info, see http://www.enbcom.com/elionthefringe/

He is on:
Tuesday & Thursday - 10pm/12am EST ** 7pm/9pm PST

Hs chat room is accessed by either his site above, or http://www.bomis.com/tvclubhouse/

Hit the Club Chat button, then select Eli on the Fringe.

To hear him, start either RealPlayer or WinAmp and paste in: 166.90.148.114:8596

Hope to see you there. He's new, and if he doesn't get a good group this week, he'll be canceled.

Thank you for reading this, as I have no clue how to help an Internet radio personality! If you have ideas, I may be contacted at:

Can anyone confirm this report? The project has been ongoing for at least a year and surrounded by "press embargos". There are cynics but still some who believe it may happen.

From: http://welcome.to/208

CLT-UFA verifies that Radio Luxembourg will be back on the air and that the project is not dead.

By Eivind Motland

- I am pleased to inform you that this project has not been abandoned, and that we are currently working on the implementation of the project, Andr&#xfffd;
Schiltz of the Broadcasting Center Europe says. BCE is an RTL Group company.

Hello All! As a former dj in the 50's, early 60's while I was a teenager, I am asking for your help. Could you please inform the public that I am offerring a $10,000 reward leading to the arrest and conviction of that/those persons responsible for stealing my Elvis ring on Sept. 2, 1999. For more complete information regarding my story, please go to my website which will only be up until Nov. 30. I would be happy to give a telephone interview live or recorded, but I am pleading for your help. The police have all but closed the case. They interviewed one of the possible perps, but did not arrest her. I want and need for justice to be served. Please go to my website for more information.
http://www.towntooter.com/elvisradiome/ Thank you for your assistance you can give me.

According to the Evening Standard, the long-awaited music station on 171 kHz LW from the Netherlands is now to be called 171 The Lounge, run from the UK by Kelvin Mackenzie's The Wireless Group.

see http://www.thisislondon.co.uk:80/html/news/business/top_direct.html

The article claims, that the new station will play The Carpenters, Simply Red and Nat King Cole in order to attract Radio 2 listeners [presumably people who can still pick up Radio 2 broadcasts from the last century]. What are the chances of it ever actually broadcasting?

The only thing I can tell you is that I know 2 people who are involved in
the return of Radio Luxembourg on 1440 khz
(and I won't reproduce their names without their permission here), but both
of them , independently from eachother,
acknowledge that , indeed, the project has still not been called off and
has the support and backing of CLT in Luxembourg.
The delay apparently has to do with legal issues, lawyers going over every
dot and comma, and so on. But the intention is
clear. I also have the impression that an english RTL on 208 would just be
a temporary thing (just to give the channel some
extra publicity) , and that the focus is on interactive digital
broadcasting over satellite and Internet.

4808. Dissertation

Newsgroup: rec.radio.broadcasting
Date: 2000-11-26 00:00:00 UTC
From: Marcus Durham <Marcus@zenn.demon.co.uk>
Message-ID: <MBZp8IArvVI6EwhL@zenn.demon.co.uk>
Source record: 16815

I'm in the middle of producing a radio documentary for my dissertation. It's entitled "Does New Technology Have A Beneficial Effect On Local Radio?" and it will take the form of a half hour radio documentary.

Although I've had a good response from UK radio stations I really wanted to get a stateside view on digital radio, internet radio and automation in the USA and where people think it's going. I've been trying to contact US radio stations for a month now by email, but have had no response.

It's odd really because UK radio stations are very keen to talk, so I'm not sure where I'm going wrong. All I want to do is chat to someone via the phone or ISDN for 10 minutes so I can get a point of view.

So this is a desperate plea really, if you are involved/run a US radio station and have an opinion on the issues I've mentioned, please email me.

Indeed, if you are anywhere in the world (including the UK), give me an email anyway. You may have viewpoint I haven't heard yet and I'm always interested to hear from radio enthusiasts.

Thanks.

Does that all fit on a business card?

Might I suggest this is a more approriate post for the more political
newsgroups? As you probably can tell from other posts, we're more
concerned with the witty antics of Wilbur on the Fringe and how
closely he compares with Billy and Arnold and how long they might last
on the Internet if he doesn't get a good audience this Thursday.

International incidents are a dime a dozen, but witty antics on radio
are very, very rare.

Excuse me, truly. Tis not spam. Eli is a new Internet radio
personality. Dan & Scott are fairly well known (or so I thought) as
the same.

I have never attempted to deal with Internet Radio before (er, I
suppost that is painfully obvious by now!)

Do a Deja search on Digilady. Most of our clients are equine - most of
the NGs therefore are equine/geek related (Perl, so on.) But I'm there
to be found.

:Who are Dan & Scott? Do they sound anything like Mitch & Billy or Todd
:& Arnold?
OH GAWD. lol! Mitch & Billy? Tod & Arnold? If you point me to them,
I'll take a listen and report back.

If this was the wrong NG for a post on Internet radio, you have my
apologies.

If not, kindly check out Eli's show Tuesday night. His producers said
if he doesn't come up with decent numbers they're shutting him down.
Not having clue 1 about Internet radio (OR any other kind, mind you) I
figured I'd pop a plea in a few NGs (radio related.)

Probably should have also asked what else I can do for him! Stuck him
in the only 2 web rings I found.

[snip]

I disagree, at least for the UK situation.

In the case of digital radio, it's all going to be broadcast in
multiplexes from one transmitter site for each area. That's fine,
there's a hill not ten miles from here that already broadcasts many
different services from one place. An ideal location for a multiplex.
The local commercial station can go on it along with some other
commercial services. All is fine.

But take Smalltown FM just 20 miles away. They have their own
transmitter site that just broadcasts their service. They have station
for their area because they are slap bang between the service of two
major areas and can't receive either satisfactorily.

So Smalltown FM can't go onto digital even if it wanted to because
there's no multiplex it can be broadcast as a part of. Therefore truly
local radio is locked out of DAB because they can't have a multiplex to
themselves.

Therefore they are stuck on FM. That's fine, but if DAB takes off in a
big way they will come under severe pressure.

I understand in the USA multiplexing is frowned on among small stations
who own their own transmitters. I hear digital AM being mentioned as an
alternative.

Of course, economic forces dictate automation, or do they? Many stations
that now automate their overnights previously just took networked shows
or ran non stop music from tape. Now they can have a local presenter.
Economic forces always determine the outcome, but technology has
provided what some may see as an improvement. Of course the outcome is

still less than satisfactory, but when there is no other alternative?

On a similar note, playout systems all very well and good. But systems can cost up to (and above) 30,000 grand. A couple of Denon CD players cost 300 quid. Isn't it more economic to still use CD's rather than buy a computer system?

It's all swings and roundabouts really I suppose.

No. Not necessarily wrong for Internet "radio" posts. However, any personality on the Internet who has to beg for listeners before Thursday or be cancelled probably closely resembles an equine posterior.

You have to understand that Internet radio personalities generally have such small audiences that it's unlikely many people know they exist, at least by broadcasting standards. Since this is a broadcasting newsgroup one should expect to be judged by those audience standards, not by the ones on the net.

In most cases, broadcast personalities are seldom very well known outside their markets. Billy Bob on the net with a 300 stream server hasn't got a prayer.

Not being active in broadcasting today, I shouldn't be commenting - but
that never stopped me.

Computer systems are getting cheaper and cheaper. Even maybe 5 years
ago when Rob Landry put all of WCRB's (classical) music on a computer
system, I doubt that he spent more than about $5000 to $7500 for
hardware. A high-school station in suburban Cleveland, Ohio, has gone
from their home-brew computer-based system to a commercial one in the
last couple of years. I seriously doubt that they had much money to
spend. And from listening to local stations using CDs, their players are
quite unreliable. Maybe the time is now, maybe not, but it would appear
that music WILL come from hard disk nearly everywhere, nearly all the
time.

There are a couple other Internet Radio stations and content providers
that post here on a regular basis. Given that, if you're talking about a
radio program being streamed over the Net, I would say it's on-topic for
this newsgroup.

You can buy systems for standard PC's, but none of them I've seen have
impressed me with their functionality. I wouldn't want them in a real
radio environment.

That said, I used Winamp to run the playout for the radio station for
the Farnborough Airshow, so what do I know?

>that music WILL come from hard disk nearly everywhere, nearly all the
>time.
>
It's certainly happened in the UK. All the stations I've be around have
used computer based playout. I'm told CD carts are used in some major
stations as well. Stations may use normal CD's from time to time (for
example a new release) but in the main it's computer playout.

CD's seem to be restricted to RSL's (Restricted Service Licence stations
that operate below 25watts for a max of 1 month at a time) and hospital
radio.

>a computer system?

Actually, it's not cheaper in the long run. It's a "no brainer" to buy a decent computer for less than $600 these days. Decent automation software costs $1000 or less. Web Jockey can be purchased for only $99.00. It's pretty limited but it certainly beats a couple of CD players alternating back and forth. Just load the music, and you have viable programming whenever you want it. Most computer programs include live assist as well as totally "live" functions, so once your music & spot library is committed to your hard drive, it becomes quite easy to automate.

You no longer need an "On Air" studio or people to run it 24/7 so the savings in the long run can be substantial. Admittedly you pay more up front than you would for a couple of CD palyers, but they don't do legal ID's or spot insertions. Hopefully you make some money from those ROS spots. You save a lot of money in the long run by using a computer, and it sounds a lot more interesting to your listeners than a pair of CD players rotating the same six or ten CD's over and over.

Just my opinion.

>The local commercial station can go on it along with some other
>commercial services. All is fine.

Perhaps I should have added one more fly in the ointment -
Politicians. The technology is still neutral. In this case, the
government has determined where the multiplexing sites will be. Other
than the physics of propagation, the technology doesn't care where
it's located.

This one sounds to me as though politicians have determined what
technology will be used and where it will be installed. In the US
virtually everyone owns their own site. We use antenna farms for
convenience not by government directive.

>Economic forces always determine the outcome, but technology has
>provided what some may see as an improvement. Of course the outcome is
>still less than satisfactory, but when there is no other alternative?

When outside forces (politicians) determine how the technology is
allowed to be used, it usually fails. Where the technology is allowed
to be used in ways that improve the operation of the station it
succeeds.

>On a similar note, playout systems all very well and good. But systems

>a computer system?

One of the largest budget items in any business is labor. When
technology allows the labor to be used more productively the
technology pays for itself. In my view, the proper use of technology
is to free humans from the mind numbing boredom of waiting to push
buttons every few minutes. Technology should free humans to
concentrate on being creative.

Unfortunately, many operators replace humans with machines in a false
economy that makes their stations sound dull and mechanical. A good
programmer who knows his equipment can make an automated or
live-assist station sound more consistent and more creative with the
same talent than one that has bored jocks serving time.

>
[snip]

Well yes, except there needs to be a number of services broadcast on one multiplex. So if you are Smalltown FM broadcasting from the top of the nearest hill (and your the only service on that hill) you're stuffed unless you join a multiplex miles away. And in many cases, the entire point of these small stations is to serve areas that have poor reception of the main sites. Madness isn't it?

Multiplexing is fine when there are lots of stations that wish to broadcast from one location. But it's not fine for the station out on it's own.

A good use of multiplexing is the fact that the BBC are multiplexing their 5 national services. The BBC use up a huge amount of the spectrum broadcasting 5 services on analogue, but with multiplexing their use of space will be more efficient.

As with everything it's pros and cons. I understand that the UK DAB system was developed by the BBC. It's probably no wonder it suits them best then.

>This one sounds to me as though politicians have determined what
>technology will be used and where it will be installed. In the US
>virtually everyone owns their own site. We use antenna farms for
>convenience not by government directive.

Well what's happened in the UK is (through history, geography and density of population) it's fairly common for more than one service to be broadcast from the top of one hill. The sites used to be controlled by the BBC and the IBA (who controlled commercial local radio). But now all the sites are owned by companies such as NTL. It is a convenience that people use the same sites. I suppose it's cheaper for a start.

>Unfortunately, many operators replace humans with machines in a false
>economy that makes their stations sound dull and mechanical.
[snip]

Very true and it's a great shame. Mind you, some stations (who force
their DJ's to read liner cards) already sound dull and mechanical.

4828. Antenna near high voltage power lines?

Newsgroup: rec.radio.broadcasting
Date: 2000-11-29 00:00:00 UTC
From: Dennis Ravn <dennis@radioskala.dk>
Message-ID: <902ibp$2m4$1@news.inet.tele.dk>
Source record: 16834

I hope someone can answer this question.

Will it affect the signal strength if I place an antenna on top of a tower used for high voltage power lines? I'll be broadcasting with less than 1KW, but I need the hight of the tower, since it's the tallest construction in the area.

I've already got the permission to go ahead, but it's rather expensive. Will the magnetic fields surrounding high voltage power lines in any way hurt my signal?

Thanks in advance

> friends machine with 128 meg.

The PC version is really heavy to use. You'll need at least 256MB RAM and the fastest CPU you can get your hands on. I've used Pro Tools for Mac for some years - and I haven't tried anything just half as good, fast and stable. The free PC version however, is not something I will recomend.

I'm currently using Steinberg Wavelab 3.03. It's cheap, it fast - and you can get tons of great plug-ins. And the great thing is that the faster the PC, the more tracks and effects you can use at the same time.

On a standard PIII 450 with 128 MB RAM I've used 14 tracks, loads of effects (compressors, limiters, reverbs) and all in realtime.

You can find more info on www.steinberg.net

It's a very easy sound to achieve. However, never underestimate the
ability of a jock to create that sound on his own, liner cards or no
liner cards.

Assuming we are talking about an FM broadcast antenna, the lines will
distort the radiation pattern if they are close to the antenna. Your
consulting engineer will be able to tell you more.

The FCC will not accept your construction permit application if it appears
that your antenna has any chance of contacting the high voltage lines
(e.g. in the event of a broken line), as they will deem it a hazard to
health and safety. But then, they aren't likely to approve any application
that doesn't bear the signature of a reputable consulting engineer,
and no competent consulting engineer would stake his reputation on
an unsafe installation, so if your consulting engineer tells you it's
safe it almost certainly is.

Since he's in Denmark, what does the FCC have to do with it?

OTOH, the safety aspect would give me something of a nightmare. I note
that cell-phone antennas are all over HV towers here in the USA.

It should work fine as long as you keep the bottom element of the
antenna at least 3 to 5 meters above the wires. This will probably
mean an extension to the tower of some sort. Try to keep the cross
section of this extension as small as is structurally feasible. If
coverage pattern is critical, have the antenna manufacturer measure the
antenna pattern on an exact model of the tower. Mounting dimensions can
have a pretty profound effect on the antenna pattern, so you want to
select the mounting scheme that puts the power where you want it.

Depending on the voltage of the high tension lines, there are all sorts
of grounding precautions that need to be observed. I'm sure the
engineering department of the power utility that owns the tower will
provide you with all the details

4834. WEBN's ``Gary Willis'' was a hoax.

Newsgroup: rec.radio.broadcasting
Date: 2000-11-29 00:00:00 UTC
From: dse+usenet@webonastick.com
Message-ID: <slrn92ap42.fl4.dse+usenet@ox.slug.louisville.edu>
Source record: 16840

It was reported on allaccess.com earlier today that a recent promotion where Clear Channel-owned rock station WEBN/Cincinnati was giving money away that was willed to the station by a now-deceased listener named ``Gary Willis'' was a hoax.

The contest was the subject of a thread on this very newsgroup earlier this month <URL:http://x71.deja.com/viewthread.xp?AN=695115119> where someone (yours truly :) followed up that the contest was strangely similar to a contest on Clear Channel-owned WNNX/Atlanta about a month ago.

Another Clear Channel hoax was uncovered in June when a woman collapsed and died as a result at a Britney Spears appearance at Top 40 station WMRV/Binghamton, NY, *also* owned by Clear Channel. Only it wasn't the real Britney Spears.

At least WEBN's web site has a notice about the hoax <URL:http://www.webn.com/featureGaryWillis.html>.

>pass it off as local. Believe a lawsuit is pending.

The Clear Channel stations around here, when they are doing a
cross-promotion with other CCC affiliates in other cities, now run blurbs
every so often explaining that "Other Clear Channel Stations" are involved.

They don't say that those stations are in other cities though.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

I hope you didn't take my post to mean that automation is "better" than live talent. It seldom is. Of course that somewhat depends onthe "talent." A good computer automation system is way better than two CD players alternating the same five CD's over and over ad nauseum (which was the original question) but automation is seldom a match for good live on air talent.

The local interest human touch is very important to radio. Unfortunately that concept seems to be lost to many of the mega-group operators who simply rebroadcast a Westwood 1 feed with a few awkward local commercial inserts. No offense meant to Westwood 1, they certainly fulfill a service, but it doesn't replace a good local DJ who understands and relates to his audience.

Just my opinion...

4839. Chicago Action: WNIB Sold for $165M, CD94.7 Flips to 80s

Newsgroup: rec.radio.broadcasting
Date: 2000-11-30 00:00:00 UTC
From: "Jeffries, Mark" <MJeffries@KRW.com>
Message-ID: <47EC15D4F5CEEC419EE573D9731D39D2148DCD@exchange.krw.com>
Source record: 16701

Things were hopping in Chicago radio yesterday.

First of all, Bill Florian, Chicago's last ma-and-pa FM station owner, announced that he was selling his classical WNIB to Bonneville for $165 million. The sale should close in February and most observers believe that the station will change formats after Bonneville takes it over, despite the fact that the group owns classical stations WGMS in Washington and KDFC in San Francisco. Bonneville currently owns in Chicago hard-leaning classic rocker WLUP (the Loop), AC WNND (Windy 100) and modern AC WTMX (The Mix).

The sale and possible format change ends an almost-46-year continuous run with classical music at WNIB, which Florian and his wife Sonia have owned from the beginning. It also ends the last competitive situation between two commercial classical formats, with Window to the World Communications' WFMT the victor. WNIB played second-fiddle to 'FMT (which celebrates its 50th anniversary this month) for many years until they moved their stick to the Amoco Building in the early 80s and added repeater station WNIZ in Zion for the north suburban and Milwaukee markets (WNIZ is included in the sale to Bonneville). As WFMT was taking its profits from its highly-successful Chicago magazine to do a lot of live performance broadcasts and commission composers to write music for them, 'NIB stuck to a basic easy-listening style classical format during the day like New York's WNCN (without the AC-style announcers, however) and soon started drawing listeners away from 'FMT (along with advertisers, who chafed over 'FMT's long-standing no-recorded-spots, no excessive supluratives policies, where the station's continuity department often did extensive rewriting of agency copy before it got on the air). As 'NIB bore down and surpassed 'FMT in the Arbitrons, 'FMT experienced some very trying times. WTTW (the PBS station that runs 'FMT as a for-profit) sold Chicago magazine from under them, clamped down on spending and even ended their advertising policies. (After a hue and cry from many in Chicago's cultural community, the station reinstated the no-recorded-spots policy--although they allow a lot of things in copy they never allowed in the old days--and started taking listener contributions as a way to make up the revenue they would've received from running recorded spots.)

Meanwhile, 'NIB continued to outpace 'FMT in ratings and revenue (although 'FMT has rebounded in the last few ratings books to lead over 'NIB in what was still a very close race). Florian told the Chicago media that he was selling WNIB because he wants to retire and he wasn't sure that anyone in his family could continue to run the station.

The funny thing was that Florian resisted offers to buy for many years, including Bonneville. He supposedly ended one discussion with a rep from Mormon church-owned Bonneville with a loud "I AM AN ATHEIST AND RELIGION IS

THE OPIATE OF THE PEOPLE!" An avid Harley rider, he also said that he would rather trust his buddies at his favorite biker bar with 'NIB before he'd sell it to Bonneville. All of which gives you an idea of his quirkiness, which extended into the station, where stray cats and dogs were taken into the station's River West studios and could sometimes be heard meowing and barking underneath the station's announcers as they were introducing Mozart. He also broke format on Saturdays for Chuck Schaden's long-running old time radio showcase "Those Were the Days" and overnights for Alfred "Mr. A" Hudgens' blues and R&B show (a holdover from the days when 'NIB did some brokered programming). All of that will soon be gone--and Chicago radio will be much poorer for it.

No indication has been given yet where the syndicated programming 'NIB carries (which includes "Adventures in Good Music" and NPR's "Performance Today") will be going, or where "Those Were the Days" will land. Bonneville also isn't saying what they're flipping 'NIB to, although it's rumored that it could be CHR or 80s oldies.

Well, forget the 80s oldies. Yesterday at noontime Disney/ABC's classic rocker WXCD (CD94.7) flipped to 80s oldies with the air-name "The Zone," joining in what's become the national format-flavor-of-the-month. Along with the format switch, all of the station's air staff were fired except morning man Kevin Matthews and his group of boot-licking sidekicks, putting on the street Chicago AOR veterans Bob Stroud, Patti Haze and Alan Stagg (whose evening "Sanctuary" recreated the attitude--if not the playlist--of late 60s free-form radio) and weekenders Mitch Michaels and Kitty Loewy. The station's running jockless except for Matthews in the morning, but PD Bill Gamble is still in charge.

This makes ABC's sixth format change at 94.7 since they flipped from CHR WYTZ to a simulcast of WLS' talk format in 1991. When the flip was made from WKHK "Kicks Country" to CD94.7 in 1997, the move was successful at first as the station was able to profit from WCKG's move to young-skewing talk and 70s oldies WYSY's sale to SBS and subsequent format and call-letter change to WLEY (La Ley). Also, initially Gamble went with a larger library than a lot of classic rockers and included some R&B and pop songs (and avoided sledgehammer metal) in an attempt to get more than just the usual male target audience. But when Bonneville took over the Loop in the summer of '97 and flipped the anemic modern AC format to classic rock, PD Greg Solk decided to take his station back to its days of black T shirts and "Kick Ass Rock & Roll" in the late 70s and early 80s and went to a hard-rock-intensive playlist (and they especially benefited from WRCX flipping from active rock to urban oldies WUBT). Meanwhile, CD94.7 started to slip in the ratings--and brining the fading Matthews in as morning man has done nothing for the station and even angered some listeners who were led to believe that CD94.7 would never have high-profile, heavy-talk morning shows (Lesson: You never believe anything you hear on the radio). GM Zamira Jones told the Sun-Times that CD94.7 had plateaued and it was time for something else.

Like most of the other 80s stations, the new Zone is heavy on the MTV New Wave bands and light on more mainstream pop (although George Michael and

Phil Collins have popped up in listening so far). It is definitely more of a rocker than Big City's WXXY/WYXX metrocast (The 80s Channel), which has done nothing in the ratings since it started in August 1999 (the *last* English-language FM flip in Chicago until yesterday), despite high-profile, high-salary jocks Robert Murphy and Fred Winston. The liners are pretty standard and Matthews doesn't exactly sound enthusiastic about the format (although he said this morning that he was glad he won't have to play "Stairway to Heaven" again). You can listen for yourself at www.cd947.com (the old site's been taken down and replaced with a Flash movie and one link for the webcast).

At this point, we should point out that WXXY/WYXX's old format was urban oldies and that they got out of that one because of the initial success of WUBT. Will ABC make Big City change formats again--or will the 80s oldies format be reaching its 15th minute soon? Will Matthews, as rumored, get out of his contract with ABC and replace Steve Dahl in afternoon drive at WCKG? What will Bonneville do with WNIB? And, as rumored, will Clear Channel be flipping either WLIT or WUBT soon--and what will they flip it to? Looks like Chicago radio could have an interesting winter ahead.

To the gang out there:

I, Meyer Gottesman, aka W6GIV/4 have been hired for
the position of Chief Engineer for an AM in NYC. What
is amazing is that I am age 65, on social security and
live in elderly housing in Macon, GA

They are really scraping the bottom of the barrel. I
guess there is a shortage of good engineers! LOL!

Anybody from NYC know where a newly rich single guy
can find an apt. in Manhattan for less than $2000.00 a
mohth. You input is appreciated.

No, it just makes them a bunch of dirty crooked liars. Yes it's unfortunate that during the last few minutes of this woman's life she was being flat-out lied to, but you can't blame Clear Channel for freak accidents. If this were the real Britney Spears would she be to blame?

The death wouldn't have happened if the Clear Channel liars hadn't perpetrated this hoax.

This is the final straw. Clear Channel is not to broadcast its stations into my home or onto my property.

4848. KLTY Back to 94.9

Newsgroup: rec.radio.broadcasting
Date: 2000-12-02 00:00:00 UTC
From: arnoldevns@aol.com
Message-ID: <20001202074952.00357.00000475@ng-fo1.aol.com>
Source record: 16704

Less than a year after moving from 94.1 to the 100.7 rimshot of DFW, Christian Contemporary KLTY will swap positions with co-owned KWRD 94.9.
The change will take place Dec. 22 at 5pm.
This represents a return home for KLTY. The KLTY calls and Christian Contemporary format originated on 94.9 in 1985. In September of 1986, 94.9 became top 40 KHYI. Most of the staff of KLTY resurfaced less than a year later on 94.1 when KOJO flipped from Spanish to Chirstian Contemp. in July of 1987.
KOJO changed calls to KLTY in March of 1989 and remained there until January of this year when a complex series of moves resulted in KLTY moving to new rimshot 100.7 and 94.1 became spanish KGDE. KLTY has seen ratings drop from a 3.6 to a 1.9 since then.

You can read about it in a Dallas Morning News article at this URL:
http://www.dallasnews.com/entertainment/227894_klty_01ove.ART.html

I know most of you have probably seen it and we're a little late in adding it but, if you're interested in one of the FM frequencies that'll soon be coming up for bid, the information pertaining to them is available at http://www.MonsterFM.com/engineering/rape.html . Unfortunately, I'm sure that you'll soon realize (by looking at the "Minimum Opening Bid" and "Upfront Payment" amounts) that this is just another way that our beloved government is making absolutely sure that each and every citizen can afford to reach into their pocket and compete with the "big-boys". (There's a bit of sarcasm in this post, somewhere. I'll leave it to you to find it.) There's no way *these* prices could possibly be geared toward keeping "big business" in control of the nations airwaves. But, go ahead and take a look. It's worth it to see the proof "in writing"...
In all honesty, there *are* a few FM allocations affordable to the average "John Doe"... As long as he'd be willing to relocate to the Nevada, Arizona, New Mexico or Utah "Emptiness" and serve an audience of 23.

Recognizing that "affordable" is a relative concept, I'd have to say that I generally agree with the above assessment. For example, the FCC has set a minimum bid of $30,000 for a class A in Soper, OK that could cover maybe 10,000 people in an extremely economically distressed area. This is an old allotment that sat unapplied for throughout the nineties.

I'm familiar with this one because I actually did consider applying for it a couple years back under the "first-come, first-serve" rules that were then in place. Unfortunately, I couldn't figure out any way that it would be possible to make money with this station. And I still can't -- but the FCC seems to think it is worth $30k.

It will be interesting to see what sort of action we see during the auction in February, and whether folks actually are willing to pay the prices the FCC is asking. Likely, I think they will get it -- the previous closed auctions brought some pretty substantial prices.

>The death wouldn't have happened if the Clear Channel liars hadn't
>perpetrated this hoax.

To extend Embry's argument, had they produced the real Brittany Spears
and this woman died, one could argue "This wouldn't have happened if
they hadn't done this promotion."

There is no reasonable expectation that producing either a rock star
or a reasonable facsimile thereof will cause someone to die.

Ridiculous charges take the attention away from legitimate ones.

Clear Channel has somehow lost the definition of the word
"credibility." This is evident not only in their promotional
activities, but in their news operations.

I'm sorry that the woman died, but I don't think you can directly
blame them for that loss. The loss of the ability to believe anything
a Clear Channel station reports, and by extension, radio itself, is a
death they can be charged with.

>This is the final straw. Clear Channel is not to broadcast its stations
>into my home or onto my property.

You'll need to address that question with the FCC, and you'll probably
not have much luck. You can, however, ban equipment from your property
that would detect their signals.

Clear Channel has been engaging in questionable activities for a while...
one only has to look at the way they've been running their contests to
figure that out.

Um. :>

Is it possible that the original poster is simply saying they are not going
to allow household members to listen to C3 stations in his household?

Cheers, SJS.

I would hope that was what he, in fact, meant, but considering that he
also used his 2 cents to plead for the secession of Bellevue KY from
the union over a census issue, I was not at all sure.

This newsgroup used to be full of people who were either current or
professional broadcasters, or people who were willing to study the
subject well enough to craft a question or answer based upon the
technical considerations of the medium, and the regulatory
infrastructure.

Since the death of Bill Pfieffer, it hasn't been the same; every time
I read this group now, I mourn his death, and realize what a wonderful
service he provided.

I read a great deal into the way a question is phrased, perhaps more
than I should, and the original poster's phrasing seemed askew to me.

Oh, good lord. I just went and checked out the web page. The poster in question is Tim Brown, a known kook who has infested some other newsgroups I participate in. Yeah, I'm not surprised you feel that way, at least not now. :)

>This newsgroup used to be full of people who were either current or

There have always been a few nutballs. The problem is that the career broadcasters seem to have lost interest in the group. :(

>I read a great deal into the way a question is phrased, perhaps more
>than I should, and the original poster's phrasing seemed askew to me.

In this case, your interpretation of his words are probably justified.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

4858. Reception question

Newsgroup: rec.radio.broadcasting
Date: 2000-12-07 00:35:51 UTC
From: sagigemi@aol.com
Message-ID: <t2tmr78mavvadb@corp.supernews.com>

Hi, fellow broadcasting junkies. I live in Mesa,AZ and one of the stations I listen to at night,being an L.A. transplant, is KFI 640. I get it perfectly clear,with no adjacent channel interference,either :), on my digital walkman, and even my good ol' manual clock radio, but... when I listen on my boombox, (Casio CD-310S),even when I have the thing tilted for perfect reception, a very high percentage of the time I hear KFI clearly...but with KTAR making lots of background noise. Can anybody explain why it does this? I have one comment on this... KFI,even though it's 400 miles away, is a 24/7 50K nondirectional... KTAR is 5K,directional at night.
What gives? Thanks in advance.

Travis Zeal
Mesa,AZ (via Los Angeles)

The correct terminology would be "controlling interest." Majority is a confusing term. Majority is generally considered a portion greater than half. Plurality is the term used to describe "more than anybody else."

4860. UK Offshore Radio Station Moves Closer

Newsgroup: rec.radio.broadcasting
Date: 2000-12-07 00:36:04 UTC
From: Mike Terry <michael.terry1@virgin.net>
Message-ID: <t2tmrkkmkma1e4@corp.supernews.com>
Source record: 16716
Cross-posted to: alt.radio.uk,alt.satellite.radio.europe,rec.radio.broadcasting,uk.media.radio.misc

From The Radio Magazine:

4 December 2000

Isle of Man International Broadcasting plc (IMIB) has further strengthened its management team with the appointment of one of the Island's leading businessmen - Ron Spencer -as its Chairman.

The Company was awarded a licence to broadcast an international radio station on 279 kHz Long Wave eighteen months ago. It is currently awaiting the outcome of a planning inquiry for the installation of its antenna and transmission station near the Point of Ayre, in the North of the Island.

"We are exceptionally pleased to have secured the services of such a successful and well known Manx business leader," said the project's founder Paul Rusling. "We are about to enter an important phase in the development of the project where Ron's experience and sage financial advice will benefit the company enormously".

Mr Spencer is well known in financial circles having been Director of Mercury Asset Management in the Isle of Man (a company now known as Merrill Lynch) for the last nine years. He is also chairman of Bank of Ireland Fsharp Ltd and Bank of Ireland (Isle of Man) Ltd and will continue on the Board of Merrill Lynch Investment Managers in Ireland and the Isle of Man. Ron Spencer was born in Billericay, Essex, and has had a very distinguished career within the financial sector including a series of senior appointments with S G Warburg & Co Ltd in the City of London and Jersey. He has recently returned from a three-month sailing expedition across the North Sea to the Baltic and was last year involved in the co-ordination of the Isle of Man Government's entry for the BT Global Challenge Yacht Race.

Paul Rusling is also well known for his time spent afloat, though on rather larger vessels with huge antennas. All of this expertise may well need to be pressed into service eventually if IMIB are unable to secure the planning permission for their half million watt station. Although they have dispensed with a thousand foot tower, traditional at Long Wave, in favour of a low profile CFA radiator, there has still been some local opposition to the plan. Rusling is known to have considered and costed installing the equipment offshore. While the additional costs are alarming, there is an added advantage of better transmission conditions over sea water, as well as a "magical link" to the days of Radio Caroline North, which for over four years was anchored in Ramsey Bay, at the north of the Isle of Man, where IMIB already has its offices.

"No firm commitment to a maritime base has yet been made," said Paul Rusling when questioned this week. "We are still confident of a favourable outcome to our request for planning permission - our antenna is safe, inconspicuous and not a problem really. We cannot really take any decisions, or enter into public debate, while the Inspector is still considering his recommendation."

The Company is also known to have increased its commitment to the Isle of Man recently with the introduction of further Manx shareholders into the Company. "We have had a lot of approaches from people in the UK and other countries, but at this stage we are concentrating on the Island, that seems the right thing to do." The station will take around 5 months to build and will target 25 to 55 year olds when it launches.

Typically coy about format, Rusling will only admit to the station NOT being music led and having a credible and substantive news operation. "It would be foolish for us to let our expensive research out of the bag and expose the niche we have found," he said exclusively to The Radio Magazine. "The radio industry is now becoming more competitive and stations are forever looking to each other and launching spoilers when a rival launches. We may well not disclose our output until launch day - it could be a nice surprise for some, though perhaps not for others."

Rusling did use this technique in the 1980s when the offshore, ship-based commercial station, Laser 558 appeared of the coast of eastern England and adopted a 'more recurrent hits and less talk' format presented by slick sounding American DJs at a time when local commercial radio and BBC Radio One were speech oriented (50% 'meaningful speech' was imposed by the IBA in those days) . The result was a hugely successful (in terms of listening) radio station. His targeting niches has worked well for other stations in recent years, including in the Netherlands where he has been involved with most of the commercial stations at one time or another

THE FOLLOWING ARTICLE APPEARED IN THE DECEMBER 4 ISSUE OF BROADCASTING AND CABLE MAGAZINE. IT IS REPRINTED IN ITS ENTIRETY WITHOUT COMMENT:

The Federal appeals court in Washington took a hard look at the FCC's plan for low power radio last week.

The three judge panel seemed skeptical of the broadcaster's argument that the FCC overstepped its bounds by easing interference standards to create the non-commercial service. During oral arguments, they appeared to cast a jaundiced eye on industry claims that the proliferation of inexpensive radios has created a market incapable of sorting out conflicting signals from low power outlets.

"The fact that (consumers) buy these cheap radios means they are willing to ignore" the added interference, suggested Judge David Tatel.

But NAB officials found solace in the judges' willingness to delve into the issue of
"Swiss cheese" interference, which is created when several low power outlets eat away the coverage area of one full power station.

The judges, however, seemed hardly accepting of the NAB's argument, although association officials noted that judges often play devils advocate. "In general, we're encouraged that the court grappled very seriously and posed tough questions to both sides," said NAB council Jack Goodman. Donald Verrilli, of Washington firm Jenner & Block argued the NAB case .

Most of the tough questions for the FCC, however, focused on whether the agency's ban on unlicensed "pirate" broadcasters shut down by the FCC went too far in barring them from ever receiving a low power license. Even former pirates with a decade or more of compliance with FCC rules must get waivers to get low power licenses. "What's the rationale behind that?" asked Judge Judith Rogers.

"The Judges were even more skeptical of the industry's position than the FCC's" commented agency lawyer Grey Pash.

Congress passed legislation to scale back the number of low power outlets as part of a larger spending package that has yet to be forwarded to President Clinton. He supports LPFM and has threatened to veto this bill, primarily over disagreements over immigration provisions and other issues.

Anyone who has an Arcam/Cymbol/Sony/Technics/Tag Mclaren DAB tuner advise me on what type of roof/loft aerials are available and from where?

I see that Hirschmann do a couple - anyone got any comments on them or any other alternatives?

Have just got a Videologic DRX601E which works really well, but I'd like to up the signal strength - I can get 7 bars (out of 16..!) lit up and wanted to see if I could pull in any other multiplexes.

Source record: 16722

Good afternoon, RRB/Airwaves participants...

Since Bill Pfeiffer's death and the onset of Pat Townson's unfortunate illnesses, RRB has been robomoderated by John Levine. Some people have complained about the signal:noise ratio going way down, and a lot of people have abandoned the group.

I arranged with John to do manual moderation of the group. Right now all of the posts are going through me.

In deference to Bill, my "mission" is to actually moderate as little as possible, as he did. I hope to keep the spam out of the newsgroup entirely; although it is possible to get around Usenet's moderation mechanism relatively easily, we should be able to keep the spam level quite low.

The other thing that Bill tried to keep out of rrb was flamewars. (I got called on that point a couple times, when I got a little upset with someone :)

Right now the moderation is 100% manual, so submissions are posted when I have time to post them (usually 2-3 times a day, although that will not happen this Saturday because I will be out of town).

Let me know if you have any questions or concerns. I hope we can push readership back up. rrb is a great group.

In vetoing the last bill - he gave several reasons, but specifically mentioned that the LPFM restrictions should go.

So it is an issue that got the Oval Office's attention.

There was also a lot of debate as far as Senator John McCain's role. Originally, he was a sworn enemy of LPFM, which was foreboding given his role in the Commerce Committee. However, he switched sides and even appeared at a pro-LPFM gathering with the Indigo Girls, although his provision that the loser in an interference case pays the all legal costs gives a very powerful weapon to established, large-scale corporate broadcasters. They could bankrupt an LPFMer by continuously filing frivolous court proceedings against him or her.

People wonder why McCain switched sides. One suspicion I have read leads to thinking that it was because Sen. Judd Gregg (R-NH) launched the anti-LPFM restrictions in the Senate, and there was some internal Republican feuding between McCain and Gregg during the NH Primary season.

Then again, in Massachusetts, a state where college and high school radio still thrive, and our Democratic senators are regarded as very liberal, Sen. John Kerry (D) shocked a lot of people within the LPFM crowd by co-sponsoring the Gregg anti-LPFM bill.

> Travis Zeal
> Mesa,AZ (via Los Angeles)

The short answer is that the el cheapo chip that receives AM in your boombox isn't as good as the el cheapo chips that do the same in your Walkman and your clock radio.

The long answer is that downtown Mesa is only about 16 miles east of KTAR's transmitter, and that's pretty close for a 5kw station only 2 notches south of KFI on the dial. KFI may be a 50kw flamethrower, but it *is* coming from (let's see...) 346 miles on the other side of KTAR, and from the same direction, so you can't null out the closer station.

True, at night KTAR is directional, and it appears from <http://www.radiostation.com/cgi-radio/recno.pl?band=AM&pos=183063> that it's putting out a bit less than that in your direction; but ground conductivity in your part of the world <http://www.fcc.gov/mmb/asd/m3/11w.jpg> isn't that bad... in fact, it looks like much of the signal path might be 15mhos/m (most of the East Coast is less than 4, for example). That means KTAR's signal is quite strong.

If you want great AM reception, your best choice is a GE SuperRadio, which is cheap and ugly, but beats the crap out of just about everything else.

find where to sign up.

4871. Moderation of rec.radio.broadcasting

Newsgroup: rec.radio.broadcasting
Date: 2000-12-08 14:38:22 UTC
From: d moeser <erasmus@iglou.com>
Message-ID: <t31siunjptio38@corp.supernews.com>
Source record: 16727

Dear Mr. Sobol:
Here's some feedback on your recent posting, along with a
constructive suggestion.

->From: Steve Sobol <sjsobol@NorthShoreTechnologies.net>
->Newsgroups: rec.radio.broadcasting
->Date: Thu, 07 Dec 2000 18:23:29 -0000
->Some people have complained about the signal:noise ratio going way
->down ...

Oh, yeah? I haven't. Nor have I seen any such change. The raw
number of postings has gone down in recent weeks, but that merely
parallels the general trend also seen on the 'alt' group. The bottom
line: some people will complain about anything.

->... and a lot of people have abandoned the group.

As far as reading is concerned, I can't imagine why. There's no
good reason for that, unless such people quit the entire Usenet as
well.

->I arranged with John to do manual moderation of the group.

I vote for robomoderation. As I said a couple of years ago, the job
is too big for any one person to handle. Period. Doesn't matter who
it is. In principle, the responsibility shouldn't be dumped on just
one person. Should be three or four moderators -- at a minimum; maybe
more, so as to spread out the workload.

Here's a constructive suggestion: Set up programming so that if
24 hours go by without the manual moderator getting around to doing
the necessary work, then the robomoderation program would kick in and
handle the backlog, thereby bringing the message stack up to date
again. This wouldn't result in any diminution of standards, because
the robomoderation program would be applying the same standards that
have been used for the last year or more, anyway.

->... we should be able to keep the spam level quite low.

I've seen almost no 'spam' (such as sex ads, other sales scams,
etc.) on any of the newsgroups I follow for over two years now. My ISP
manages to filter it out. The big change on that occurred back around
1998. Since then the various other Usenet newsgroups I follow -- all
unmoderated -- have been no worse than this moderated group.

It so happens that I do all my (relatively rare) public posting on
the unmoderated group as a matter of principle, but as for being a

reader, I feel the biggest issue is for the newsgroup to be kept
reasonably up to date -- meaning posting messages at not more than
24-hour intervals. All I can say is: Good Luck! I hope it works out.
(And I hope the robo program is still available when burnout inevitably
sets in.)

4873. For trade: 1980's easy-listening airchecks

Newsgroup: rec.radio.broadcasting
Date: 2000-12-09 01:55:38 UTC
From: Steve <stevew625@nym.alias.net>
Message-ID: <t3348qq1t60gbb@corp.supernews.com>
Source record: 16729

I have a sizeable number (approx. 100) of Beta hi-fi video cassettes containing recordings off the air of EZ broadcasts from the late 1980's. The tapes contain hi-fi stereo audio only, no picture, they play on a normal Beta hi-fi VCR with the sound coming from the L and R audio jack. The tapes are slightly longer than 4 1/2 hours each, and are uninterrupted recordings of what went over the air including announcers, commercials, etc, recorded at various times of day. About half of the tapes are of KMEZ-FM Dallas from late 1988, the other half are from KOOI-FM, Tyler-Longview, TX from 1989. Also, there are 4 tapes from KBRD Seattle from late 1990. The tapes from KMEZ Dallas were made shortly before that station abandoned the format (taped off the 100.3 station, which changed format at the end of 1988, the KMEZ call letters and format moved to 107.5 for about a year after that before it went away). The air personalities include Tim Kase, Ken Loomis, Bill Woods, Pat Ross. The tapes from KOOI are mostly from the nighttime when the station was automated and include hourly newsfeeds from ABC. The music mix is about 25% vocal, 75% instrumental recordings of popular songs.

I am not really interested in selling these but trading them for other recordings of instrumental EZ music which can't be bought (CD's, 10-inch tapes, etc.) especially if they are from the earlier 1980's or from syndicators others than ones used by KMEZ and KOOI. Email me. Also, I have a partially working Sony beta hi-fi VCR which needs minor repairs (it plays fine but may take a few attempts to start) which I no longer need. If there are no takers these tapes will probably show up in Salvation Army thrift store in Dallas in a few weeks.

Be careful with the results from that web site, the X & Y axes are
interchanged on the pattern plots. While it doesn't make too much
difference in the case of KTAR, because its axis of symmetry is close to
45 degrees, the correct pattern can be obtained from this site, which
doesn't have the programming error:
http://stations.triathlon.net/cgi-radio/recno.pl?band=AM&pos=183063

>->... and a lot of people have abandoned the group.
>
> As far as reading is concerned, I can't imagine why. There's no
>good reason for that, unless such people quit the entire Usenet as
>well.

Ok. Here I must take issue with you. But I base my observation on the number of POSTERS which has gone down steadily since Bill's passing... way down. But I also have the list of Airwaves mailing list subscribers - why I have it, I'm not sure, but I have it, John sent it to me - and it's small... between ten and twenty.

Determining the number of Usenet readers is, of course, impossible.

> I vote for robomoderation. As I said a couple of years ago, the job
>is too big for any one person to handle.

It takes five minutes of my time, two or three times a day. It involves quickly scanning the posts, then filing them in a mailbox and running a couple Perl scripts that strip off inappropriate headers and send the post out through Supernews.

>it is. In principle, the responsibility shouldn't be dumped on just
>one person. Should be three or four moderators -- at a minimum; maybe
>more, so as to spread out the workload.

Said workload doesn't exist right now - that's part of the problem; there *is* no participation.

What I'd really like is to rally some interest from local broadcasters - although I am not a broadcast professional myself, I have two business partners who have spent many years in radio and TV, and a couple friends working at local stations. I'm interested in drumming up a lot more interest than there currently is. This is certainly not a slam against *any* of the people I see posting here. There just aren't enough of us. :)

> Here's a constructive suggestion: Set up programming so that if
>24 hours go by without the manual moderator getting around to doing
>the necessary work, then the robomoderation program would kick in and
>handle the backlog, thereby bringing the message stack up to date
>again. This wouldn't result in any diminution of standards, because

>the robomoderation program would be applying the same standards that
>have been used for the last year or more, anyway.

It's a thought - I'll definitely take it under consideration. But unless I'm out of town, it's unlikely any posts will sit for anything approximating 24 hours. I work on the Net.

> It so happens that I do all my (relatively rare) public posting on
>the unmoderated group as a matter of principle, but as for being a
>reader, I feel the biggest issue is for the newsgroup to be kept

David, you have my solemn word that if it ever gets to be too much of a burden, I will fall back on the robomoderator. I'm pretty sure that John won't have a problem giving it to me if I ask for it...

Thanks for the comments. (Censornati... heh.)

Yes, and how I got added to the feed of unmoderated messages I have no
idea. In the last three days I've seen three or four "get rich quick"
chain letters and some relevant posts go by.

>Determining the number of Usenet readers is, of course, impossible.

Yes it is, and I was one of those who chose to read the group by the
usenet instead of on the listserv. I"m not quite web enabled here,
and would just as soon be delinked from the listserv stream so I can
go back to reading it when I choose to read usenet.

AS you know I commented to you a couple days ago about the quality of
the group since Bill's passing. I"m glad to see you taking over the
moderator's gig, and will occasionally look in on the group, but have
found it much less worthwhile to me to downlload it at 14.4kbps. Yes,
I read and post offline) than I once did.
It meshes better with my lifestyle.

Btw, I've sent a note to root@airwaves.com and webmaster@airwaves.com
asking if they'd delink me from the email stream with no success.
IF they intended I assist you, I didn't give my consent. Nor do I
have the tools to accomplish the job.

Btw, the posts I"m seeing are address to:

rec-radio-broadcasting@moderators.isc.org

I hope this helps you get a grasp on what's going on here. WOuld
really like to go back to downloading chosen usenet groups and
filtering to read at leisure. The unfiltered posts kind of add a
little clutter to my mailbox <g..

> 17. =93KXXO 13=94 from Tulsa, OK city-of-license?

This was the only one I knew.

KXXO-AM 1300, Tulsa - 24/7 news / talk. This had to have been the early 80s. I took a tour of the KMOD-FM 97.5 / KXXO studios in Boy Scouts & got a glow in the dark "#1" shaped keychain with their info stamped on it in gold.

They're running 3 towers from deep southeast Tulsa, either 1,000 or 2,500 watts. Either way, a crummy signal especially at night.

In the mid 80s it became KBBJ (playing Big Band Jazz / music of your life), then around 1990 (maybe late 80s?) took the classic KAKC calls and went 50s & 60s rock and roll oldies from satellite.

Today it retains the KAKC calls, but has within the past 3 years become "La Bonita" (you guessed it): Hispanic programming. Having known of the legendary rocker, KAKC, I must admit my bias in hearing "Ka-Ah-Ka-Seh" as the Spanish pronunciation of the calls; they should have changed it, IMHO.

Ironically enough, I now work at the old frequency for the KAKC calls: 970 AM. The current calls are KCFO-AM 970 Tulsa... and it programs religious preaching and teaching! :)

Hope this helps!

4886. DFW radio news/Howard Stern

Newsgroup: rec.radio.broadcasting
Date: 2000-12-10 03:00:48 UTC
From: arnoldevns@aol.com
Message-ID: <t35sf08quqnna4@corp.supernews.com>
Source record: 16742

The Dallas Morning news is reporting that Howard Stern is returning to the DFW airwaves in January on KYNG-FM 105.3. This has been a long-rumored move that was delayed during his contract talks. Now that it appears he will sign a deal, the station is going ahead with the announcement.

ABC announced that 103.3 FM will return to the air sometime early next year with ESPN Radio. 103.3 is a rim shot that is being moved and upgraded to a class c1 from Allen. (just north of Dallas) The transmitter will be with several other move-ins about 40 miles north of the area. The sign-on will be dependent on several other stations moving as well.

And last, but not least, 93.3 "merge" has transitioned to some kind of 80's 90's hot AC format. You can listen to them on the web at merge933.net. It's an unusual format, but more listenable than what they had been doing.

Just a minor correction -- it will be a Full C, not a C1. And it will
be running from the tower currently shared by KTPW "Power 89.7", KTXQ
"Magic 94.5", KLTY 100.7, and KTCY 104.9.

4889. A brief, incomplete history of radio

Newsgroup: rec.radio.broadcasting
Date: 2000-12-10 19:42:16 UTC
From: mdj <radiooneNoSpam@example.org>
Message-ID: <t37n4okjsj5c13@corp.supernews.com>
Source record: 16745

Thought you might enjoy this:

This came to me indirectly from radio consultant Guy Zapoleon.
A BRIEF, INCOMPLETE HISTORY OF RADIO...

Thinking about how & why you got into radio, who influenced you, your best radio moments, what you still hope to achieve. War stories about broadcasting despite impossible conditions, accidentally locking yourself
out of the studio, on-air flubs. Stories about personal connections that
have been made with listeners:The girl who called to request her late grandmother's favorite song...The fan who sent you chocolate chip cookies
on your birthday...The listener who berated you for mispronouncing the name of his favorite artist. Stories about transistor radios under the bed
covers and at the beach.

Endless struggles to control the car radio buttons. "Would you PLEASE turn
that down" and "Wait, I want to hear this!"

Novelty records and girl groups and Motown and Stax and Cadence and Elvis
from the waist up and hearing "I Want To Hold YourHand" for the very first time. Stories about lovesick teenagers dedicating songs back & forth
to each other. About children turning on the radio before they're even awake, feverishly hoping to hear those magic words from their local disc jockey: "No school, snow day...."

About loneliness and a solitary voice reaching out to you. About making A
complete stranger laugh or reflect or remember. About baseball games From
far away on car radios. About someone driving across town or cross country, with only you and your radio brethren for company.

Stories about Larry Lujack and John Records Landecker and Robert W. And Wolfman Jack and Gary Owens and Dr. Don and Kenny Everett (ask someone from the UK about Kenny) andthose crazy young jocks who brought American-style radio to Europe in the1960s by taking to the seas in honest-to-God pirate radio ships(imaginebroadcasting under the worst possible conditions; now imagine doing it while seasick).

Stories about bad news and everyone immediately turning on the radio. About sad news and where you were when you heard it.About practical jokes
and misunderstandings and mild or wild revenge. About getting fired, packing up the U-Haul, and being scared all over again.

Getting angry, getting older and "the good old days." Static-y voices criss-crossing in the night. Fifteen-hour air shifts,flaky jocks, disappearing engineers.

Stories about legendary radio people you almost met in an elevator at a convention. The major market PD who did you a favor;the request line caller
you can't forget. Practical jokes on the newsguy, disappearing stationery,
and a bedroom full of promo records that one day will be worth something.

Staying up late talking radio, swapping tapes, "borrowing" ideas, "embellishing" your ratings,deepening your voice,losing your voice, losing
your place, losing your keys, losing your cool.

Wire service copy paper, 15-inch reels,pin-controlled automation. Caffeine
addictions and junk food and whatever thestation could trade for.
Old friends, borrowed headphones, uncontrollable sleep-deprived laughter.

Razor blades, splicing tape, grease pencils. Draping the tape edit over your
shoulders until it was safe to throw away. Cue tones, cue sheets, in cue,
out of breath.Slip-cueing, back-announcing, and hitting the post. Egos, rivals, and friendships. Imagination, excitement, Orson Welles and Jack Benny and Ma Perkins and Franklin D. Roosevelt and Arthur Godfrey and
Don McNeil's BreakfastClub.

Losing jobs, gaining weight, changing names. "How do they do that?" and "Listen to this!" Storz, McClendon, Drake...and Chuck Blore's Color Radio. Play-by-play and blow-by-blow; sports scores and election returns and Number One on the charts this week.

7-7-7, First Ticket, Hooper, Pulse, "You don't look anything like you sound!"
"What am I doing with my life" and 7-day workweeks and "I can't believe I get paid for this!"

Slow starting turn tables, nickel on the tone-arm, the cart machine sticks. Stories about hotlines, hotshots, skimmers, phantom cume, time checks, time warping, ratings, feelings, winning, showing off. T-shirts and coffee mugs and iridescent frisbees. Billboard and Claude Hall and Cashbox and Record World and R&R and Bill Gavin's green pages. Floods And
tornado watches and power outages and school lunch menus. Lost dogs,

lost
accounts, lost tempers.

Jiving, shouting, rhyming, whispering. Hiccup remedies, lemon 'n' honey, and goodold-fashioned adrenaline to save the day. Embarrassed, elated, delighted. Hi-Low, Name It And Claim It, and Dollar-A-Holler. Playlists and station surveys and GoodGuys. Q, Zoo, and Boss. Bob & Ray and Mike & Elaine and The Monitor Beacon.

Jingles, stickers, Chickenman and The Oidar Wavelength.Silly stunts, intense rivalries...Passion. B-sides and label colors and songwriter credits. Favorite songs, favorite artists, favorite moments.

Newspaper wars, live remotes, and meter readings, Shouts, stingers, sweepers, stagers, stabs. Make-goods, live tags, rip 'n' read and backtiming to the news. AllanFreed and Dan Ingram and Cousin Brucie. Beat the Bomb and Lucky Bucks andBattle of the Bands.Pinning the needle, pegging the meter, riding gain.Feedback and wrapping the capstan and "Hold on a sec, I gotta go on the air..." Sign on, signoff, warming up the filament and Compression, Compression, Compression!
Gates board with rotary pots; Automaxand Volumemax.Intros, outros, ramps, talk-ups. False endings andrecords popping& skipping and carts jamming. Philosophical Differences and late night resume photocopy sessions. Tight board, good pipes, will relocate. The big break, bad luck,
skip waves, skipping town with the air staff's paychecks.

Cueing past the splice, heavy phones,cue burn. SolidGold, Hot Nine at Nine, Hot 100. WABC and KHJ and KLIFand WOWO and WLS and making it to the
big markets. Friday night countdowns, Saturday Swap Shops, Sunday drag racing commercials, twin spins,doubleplays, tripleshots and instant replays. Romantic entanglements, brokenhearts, bigdreams, small wins, and "Garbage Mouth Leaves Cleveland."

"NO ONE is to touch these carts! And that means YOU!" "Were you listening
when...?" and "What'd ya think?" and "You should have been there."

Now you are there. What are you gonna do with it?

(Tom Noller...a.k.a. McCarthy - Warm 106.9FM)

How did you get the DRX601E so early, just out of interest?

I don't know what a SLAPP suit is. But the prospect of litigation (with or without merit) could effectively scare a local group or community away from LPFM if they learned they could be sued from the get-go and spent more money in court than on broadcasting service.

Dear Fellow Mpower Agent:

I was just made aware that our extra $10 per line that we were supposed to receive in November and have been promised to date in Dec. will not be paid until Jan. 2001.This would also mean that the check we should receive in Dec. for Nov. business will not be paid until ? I would suggest to all agents that they not book any additional business until we are paid this money!! In addition I would suggest that no additional business be booked until Mpower has turned up, AND PAID US, the majority of the business we have booked. I am afraid of the multitude problems that we may incur on conversion billing issues, and until we know that we in fact will be paid timely on conversion and on a residual basis. Mpower has broken to many promises for us to continue to book business. The first being that our customers would be set up within six weeks of signing.
Those are my thoughts. Please e.mail me with yours.
I spite of Mpower putting COAL in our stockings, may all of you have a Happy Holidays!
Craig D. Linkhorn, Agent

>service.

The upside is that they'll have more listeners in the courtroom than
they would have on the air.

If LPFM microcasters are so absolutely convinced there will be no
interference, this shouldn't be an issue. They will have done all the
relevant studies and buy only type-accepted equipment to make sure the
signal is clean.

If all the receivers out there had high quality, very selective and
bulletproof front ends I'd be comfortable. Real world receivers are
seldom very good at that. It's more likely the interference in a cheap
receiver is what will generate complaints to full power broadcasters
and justify legal complaints against LPFM.

Any broadcaster understands that litigation is a cost of doing
business. No matter what you broadcast you'll offend someone at some
point. Better have Errors and Omissions insurance. One day one of your
Jocks or Talk Show hosts will offend someone who will sue.

Rich

Well, it was supposed to be available from Dixons/Currys from "mid
November". But it's an order-only item. To get hold of it you need to know
that it exists, the product code (186364), order it, and then wait until the
next delivery.
So, "in the stores from mid-November" is ever so slightly misleading.

Besides, I'd be inclined to wait until after Jan 1st when anyone can sell
it, and this will bring the competition in and reduce Dixons outrageous
prices. I've set my buy-point at £149. I'd reckon that will come around in
about May. Once Richer Sounds or someone similar get in on the act, we're
off and running.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

The proper type of aerial for DAB is a "Band III TV" aerial. This will cover the range approx. 174 to 225 MHz, which used to be used in the UK for 405-line TV (mostly ITV), and is still used in some European countries, so should be available from good aerial suppliers. One such is 'Aerial Techniques'(no Web site), who advertise in 'Short Wave Magazine'.

The frequency allocation for DAB in the UK, according to the official Table, RA 365, is 217.5 to 230 MHz.

"Over one hundred Dixons stores will be stocking the DRX-601E in their Hi-Fi
separates' department. Dixons is the UK's leading high street retailer of
consumer electronics, selling the largest range of TV, video, audio,
personal computer, photographic and communications technology. The
VideoLogic DRX-601E will be available in Dixons stores at the end of
November and will be exclusive to Dixons stores until December 31st 2000."

Hi all!
If you are looking for a interesting, engaging topic or guest may I sugge=
st
Jason Zasky and Failure of the Year? I have attached a press release and =
letter
of introduction.

Thanks!

FOR IMMEDIATE RELEASE
DECEMBER 13, 2000
CONTACT: KATHLEEN ERVIN, 914/722-6295
kervin@failuremag.com

MAGAZINE ANNOUNCES FIRST ANNUAL "FAILURE OF THE YEAR=E2=84=A2"

Scarsdale, NY=E2=80=94Why wait for Time magazine's "Person of the Year," =
when you
have Failure? Failure magazine=E2=80=94www.failuremag.com=E2=80=94the new=
Web publication
covering all things failure today announced its first annual "Failure of =
the
Year=E2=84=A2" in the article by history writer Jack Stesney. =20

"While there were many strong candidates," said Jason Zasky, Failure maga=
zine's
editor and CEO, "our choice for =E2=80=98Failure of the Year=E2=80=99 is =
the disappointing
breakdown of the Israeli-Palestinian peace process. Certainly, the U.S.
presidential election, the Firestone crisis, and the non-impact of Y2K ar=
e all
stories of importance. But the events that are transpiring in the Middle =
East
could very well precipitate another Arab-Israeli war, dramatically affect=
ing
the lives of people all over the world."

Here is what the media and critics are saying about Failure: The Boston G=
lobe
described Failure as "exquisitely against the grain." "Forget Forbes and
Fortune," said The San Francisco Chronicle, "this is the best place (and
perhaps only) place on the Net to keep abreast=E2=80=A6." AtNewYork.com s=
aid, "Smart
and savvy describes the content, filled with lots of historical tidbits t=
hat
should keep the competitive-minded winners of the world salivating for mo=

re."

Covering stories large and small, historical and current, Failure and its
nationally recognized writers explore the world of arts & entertainment,
business, science & technology, history, and sports with a bold perspecti=
ve
that is insightful, informative and entertaining.

Failure Magazine LLC is a privately owned and operated media company feat=
uring
Failure magazine=E2=84=A2 and FailureWear=E2=84=A2, the new clothing and =
merchandise line.

Letter:

Allow me to introduce you to Failure=E2=80=94the sophisticated new online=
publication
at www.failuremag.com that addresses the subject of failure.

If you=E2=80=99re looking for a compelling year-end story (or guest) I ho=
pe you look
no further than Failure. Everyone has heard of Time=E2=80=99s "Person of =
the
Year"=E2=80=94well, on December 12 we will be announcing our first annual=
choice for
"Failure of the Year." (We promise it won=E2=80=99t be the U.S. president=
ial
election).

Covering stories large and small, historical and current, Failure=E2=80=99=
s
nationally recognized writers explore the world of business, arts &
entertainment, science & technology, history and sports from a bold persp=
ective
that is insightful, provocative and entertaining.

Editor and CEO Jason Zasky is former managing editor for Billboard=E2=80=99=
s Musician
magazine and is a nationally recognized journalist, speaker and
musician=E2=80=94equally comfortable in front of the microphone as the co=
mputer.

Here is what the media and critics are saying about Failure: The Boston G=
lobe
described Failure=E2=80=99s content as "exquisitely against the grain." "=
Forget
Forbes and Fortune," said The San Francisco Chronicle, "this is the best =
place
(and perhaps only) place on the Net to keep abreast=E2=80=A6" AtNewYork.c=
om said,
"Smart and savvy describes the content, filled with lots of historical ti=
dbits
that should keep the competitive-minded winners of the world salivating f=

or
more."

Of course, we understand that failure is a loaded word, so for us approac=
h is
everything. We report, we analyze, we investigate, but unlike many other
publications we don=E2=80=99t critique or make failure a personal issue.

Thank you for your time, the story and consideration. A media kit may be =
found
on our site. Also, I may be reached at 914/722-6295 or at
kervin@failuremag.com. I hope you see Failure in your future.

Happy Holidays.

Kind regards,
Kathleen Ervin

>or handheld mics...

When I thought this might be workable a few years back, I did some quite satisfactory recordings by working via a MD (or it might have been a DAT) recorder and feeding through using its mic amp. Can't remember which DAT/MD, but it will have been one of the early Sony's. Had the added advantage that you could record and backup simultaneously.

Problem 1: At the time I used a rather rare laptop from Fujitsu. This would sit in record/standby and fire up instantly. I have never found a laptop since that would do this reliably. All the modern laptops I've tried take an age to boot and navigate into record.

Problem 2: Where will you find a journalist who will be able to get the levels right, get the machine recording, manage the battery and not drop/sit on/leave the machine on the bus?

I'd be interested if anyone has cracked problem 1.

Bill

In that case it looks like you might be closer to KTAR's null (with thanks to John Byrns for the correction there), but the circumstances are little different than what I mentioned in the first place:KTAR is too close on the ground, on the dial, and on the axis of orientation toward KFI. You're looking at a distant station across a local one. Since some radios seem to handle it, you're not out of hope -- just out of luck with that one boom box.

4909. Challenging Matt Drudge

Newsgroup: rec.radio.broadcasting
Date: 2000-12-14 06:51:09 UTC
From: "King Daevid MacKenzie, UltimaJock!" <kingdaevid@radiodigest.com>
Message-ID: <t3gretg3i90vdb@corp.supernews.com>
Source record: 16665

...below is part of the text of this week's column, as it appears at
http://www.radiodigest.com/chicago/2000/chi_121300_mackenzie_2.phtml
...towards the end is a challenge to one Matt Drudge...any comments?...

+++++

As I've been mentioning the last few weeks, one of my more recent reading habits has been some collections of the writings of H.L. Mencken. One of the volumes I've been paging through, "The Vintage Mencken," was "gathered" by Alistair Cooke (who, by the way, still can be heard on the BBC World Service); he describes Mencken as "the one-man demolition crew of the genteel tradition." In Chicagoan terms, Mencken made Mike Royko possible, just as Muddy Waters made The Rolling Stones possible.

In a 1922 item titled "The Libertine," Mencken decries man's "excessive timourousness, his easy yielding to alarms, his incapacity for adventure without a crowd behind him." This Mencken dubs in the immediately previous sentence "poltroonery."

Immediately after coming across this comment, I reached for and opened my dictionary -- the Encarta World English Dictionary, which, being in the low-tech form of the printed page, is the only Microsoft product guaranteed not to malfunction no matter how bloody much you use it. "Poltroon" is defined in that volume as "an offensive term for a contemptible coward."

Which brings us around to much of the activity on the Crowbar, a Chicago radio "discussion" board at http://www.zecom.com/crowbar that has been infested with poltroons for an awfully long time. Proof of this was given last Wednesday when, in response to my column closer last week, there were a couple of threads with a dozen messages between them from some poor pseudonomous dunces who were wondering what the hell a poltroon was but couldn't be bothered to find a dictionary, let alone use one. It was about 7:00 that night, eight hours after my column went live on the Web, before anyone actually associated "poltroon" with "coward" anywhere on that board. (By the way, Milwaukee has a similar message board at http://www.brewcityradio.com that is frequently just as bad but, in a screwy manner, almost more interesting than whatever can be found on most Milwaukee radio stations.)

Although an occasional morsel of sense can be seen there, the most frequent use of the Crowbar over the last couple of years (even after a period of several weeks whereby the board was suspended by owner Marty Zivin in an attempt to shake the infestation) has been for the infantile ridicule of certain radio personalities, often by those who appear to

ally themselves with the fandom of other radio personalities, almost always by individuals who post messages under pseudonyms or nicknames rather than traceable names and addresses. Sometimes, you'll see someone use the name "Robert Murphy," although you can be sure it isn't actually from the departing "80s Channel" morning driver. Two or three different folks are now sniping at one another over the use of the nickname Black Crow (the original one, whom I happen to agree with on most occasions, is stridently anti-Dahl). Basically, it's a three-way pissing match wherein Howard Stern fans take swipes at Mancow Muller, Mancow's audience swipes back at Howard, and they both take shots at Steve Dahl. Usually not substantively, mind you; most of these verbal jabs are so weak that they make a game of The Dozens seem like those debates PBS and NPR used to offer on "The Advocates" and "Firing Line."

Of recent date, these cowards have taken swipes at opinions I've expressed in this column. But, to establish their poltroonery, none of these individuals appears to have used the e-mail link at the end of each of these columns, instead posting their complaints pseudonomously on the Crowbar; in almost every one of these cases, these cowards can't even substantively address the actual points I state, instead attacking me personally by making inferences about everything from my source material to my sexual orientation to my work history and how I got this column -- all such allegations being, I can clearly state, false.

As if I needed to say it, let me make this crystal clear. If you have a problem with what I state in this column, bring it to me directly. And, if you don't like what I usually write here, don't bother reading it. And, even more than that, if you can do a better job, take the time to build your own web site or hook up with some print outlet and do it yourself instead of heckling from the shadows, if any of you (ha!) actually have the guts to do it.

The problem is, this is the crowd that much of radio consciously targets with programming from hosts who themselves repeatedly display their own cowardice. Howard Stern wonders on-air why the Columbine killers didn't try to rape the corpses of their female victims. Mancow Muller sends his own toadie, charmingly named Turd, to Stern's New York studio to deliver a parcel of said toadie's fecal namesakes. Steve Dahl secretly wiretaps the studio of two other hosts at the same station for which he works simply because he suspects they dislike his attitude. Rush Limbaugh does his damndest to make sure his call screeners don't give him any callers who dare disagree with him. Laura Schlessinger makes viciously bigoted comments on her show about various social groups, and then whines about how the reaction by those she has sinned against impinges upon her ability to escape responsibility for those comments. Matt Drudge falsely claims the President of the United States fathered a child as part of an extramarital affair with -- how convenient for the bigots who like Drudge! -- an African-American woman.

And the poltroons eat up this sewage as if it was nourishment from the very hands of Almighty God. It's as if the broadcasting barons set piles

of horse dung out on the street and determine which is the most popular by the numbers and physical size of the flies each pile attracts.

Allow me to now make a challenge that will prove further what kind of coward that last blowhard is. It's in relation to something that popped up on MSNBC last week. Alec Baldwin, not always a paragon of rational thought himself, objected to Matt Drudge taking a comment about the Bush-Clinton-Perot election of '92, the one about leaving the country after a Bush reelection that never took place, and somehow applying it to the Bush-Gore-and-assorted-additional-clowns-of-lesser-stature election of this year. Drudge attempted to defend himself by claiming he merely placed a link on his web site to an Associated Press item; of course, Drudge did much more than that by talking about the flawed item incessantly on his ABC radio show. You can't link a web page on a radio show, Matt. But then Drudge opened his mouth and said, quoting MSNBC's report here, "If he wants to leave, I'll buy him a one-way ticket."

Well, Matt, since Baldwin isn't going to claim that one-way ticket -- not only did he never state what you said he did within the context you claimed, he also doesn't need anyone else's money to cover travel expenses -- I'll take you up on that ticket offer myself. Mind you, I won't be particularly extravagant on the destination, I'll settle for Toronto. Although I'd be placing myself in the precarious position of being subjected to Washington's cretinous foreign policy, Jean Chretien is an infinitely more intelligent and sane national leader than Dumbya will ever have the capacity to be. Of course, Immigration Canada also tells me that one-way tickets from Chicago into Toronto also have to be accompanied by enough money for myself and my family to live independently for five years, so you'd have to pony up for that amount too. Simply plunking down a few bills at the Greyhound station won't cut it, Matt.

But here's how this becomes a lose-lose for Sunday Night Matty. If he does pony up for the expenses involved in this challenge, he automatically admits he has no use for the right to disagree with him that's found in the First Amendment by sending a dissident into exile, no matter how voluntary it is. And if he doesn't, he proves himself a gutless blowhard weasel, which we all think he is to begin with. (You poltroons on the Crowbar don't have to worry, as I'm not asking for your beer money; the deeper the stupor you guys drink yourself into, the less damage to American society you can cause.)

Remember, friends, every further Chicago column written by me is a testimony to the poltroonity of a certain Sunday night air personality heard locally on WLS. So will the absence of this column. Ain't the Web grand?

+++++

> stations. Thanks in advance.
>
> 1 WAVE Country 970 From Louisville KY Were these the actual call
letters
I always had trouble knowing if that WAVE or WAGE. To me their announcer always seemed to say "wage970, WAVE". Obviously, it made no sense to me then, nor now.

> 18 KMCW 1190
Many years ago, I listened to a station in Augusta, Arkansas. I think they used the callsign KMCW. Always had a booming signal. Antenna was in some farmers field with rich soil that MUST have had excellent conductivity.

Hope this helps,
Kelly

4912. ABC Radio News/Tim O'Donnell

Yeah, these guys called today. They wanted a "guest for a computer talk show." What's the show about? I asked. "Well, you're in the computer business, right? It's a show about computers. My listeners have been pounding the table for us to get a show on computers. In fact, maybe you could host the show...." You get the rest.

Anyway, I was late for a meeting. So, I said let me get more info tomorrow. Meanwhile, I let my fingers do the tapping through deja.com, and I find out the scam. Saved by Usenet.

What say tomorrow I say, "By the way, I'm getting a show going down here in Texas, too. You can kick it off if you'd only come down here and jump up my arse?"

Peace--

I think that there may be a much bigger issue at stake here: In terms
of user/listener count (what, 100-200 people at a time?), netcasting
effect is peonic.
However, if their claim that the different digital transmittion mode
requires a second licensing agreement prevails, what do you think
that they are going to try and pull--and this is why I think the
broadcasters are going to fight this tooth and nail--when (or, should I
say *IF*) the stations begin a transition over to digital, thereby
having a second, digital feed (a la, TV's current digital transition)?

From 'Tim Lones':

>WQIO-1060 is Now WRCW in Canton Ohio (Other calls, 1946-early 60's
>WCMW, Mid-late 60's WHOF Late 60's early 70's WOIO- Now TV Channel 19
>Cleveland

The calls live on, actually. WQIO-FM has been at 93.7 in Mount Vernon, Ohio (northeast of Columbus) for years. Was top-40, flipped to country for a while, and now (I believe) is doing top-40 again.

OK, as from yesterday, there are two in the Dixons stores within a 40 mile radius of me.
It's still hardly a "go into Dixons and buy one" item, is it? By the time they've got their act together, it'll be January and Richer Sounds or someone will be undercutting them by £100 quid.

I use a MD recorder as a pre-amp when recording voice tracks onto my
laptop. Works fine. The mic inputs on computer soundcards are all
useless, as far as I'm concerned. As for problem #1, yes, Windoze
takes a while to boot up on any machine. If the machine itself is
booted up, it sounds like you may need more RAM or may have a software
issue. But I can't imagine even wanting to use a computer to record
raw sound of a news event. I use MD's for that, (a Sony MZR90 that
fits in a shirt pocket) and dump the audio into the computer later for
editing. (I use CoolEdit 2000. It's easy and does everything a
reporter needs done).

As for problem 2, I manage quite nicely, thank you (of course, I don't
ride the bus--I have a big 4-wheel-drive vehicle to use, thanks to a
generous employer).

I don't think they ever did. But it was used by KIOI (101.3 FM) in San Francisco. Just recently they changed their format to all 80s and their slogan to Star 101.3.

For many years they were in Tampa... off Florida Avenue if I remember correctly. Just north of "Sulfur Springs"...

At one point, their main transmitter was out of service, so the CE retuned his Johnson ham rig, and used that on the air (with limited power) for a few months while they waited for parts (and $$$$) to pay for little things like a modulation transformer to be built and delivered.

They moved out of Tampa in the early 90's as I remember.

Again another great software idea for developers catering to broadcasters.

Many stations have been starting automated dating services or partnerships with companies who do them.

a 14.4 modem with voice mail capability cost about $5 at any flea market.
a computer that supports it Less than $350

Now all you need is the software that uses your voice modem to run a dating service and for under $500 you have a potential revenue generator.

Again I want my cut or else!!!

OK, I am going to share my million dollar idea in this forum.

Whoever develops it...cut me in, or I will sue.

Since more and more stations are getting caller ID why not devolop a caller ID compliant database that flags habitual prize hogs for the talent to use when taking calls?

It could also keep track of abusive callers, again to weed out at the talents discretion.

What setting a fee for netcasting music does in effect is to make netcasting
economically unviable. There isn't really enough of an audience to justify
paying any fee worth collecting, and I can imagine that paperwork requirements
might make the situation worse. Of course, it's also a joke. It's sort of the
equivalent of trying to charge a record store for playing records over a
loudspeaker to the outdoors, it's possible but in the long run, it's also
likely to cost recording sales.

Northeast

At CHR/WMEE (97.3fm, Fort Wayne) Geno Burgess is promoted to morning show producer for the Rick Dees in the Morning show. Also, he'll be APD under OM/PD John O'Rourke.

Mark DePrez is now GSM for Country/WQHK (105.1fm, Decatur). He'll continue to be the Director of Sales for all of Federated Media's stations at Maples Road: WOWO, WONO, WQHK, and WMEE. Also in the goings on at Maples, AE Jim Tighe is promoted to GSM duties at News-Talk/WOWO (1190am, Fort Wayne)

Where are they now? Zack Skylar, formerly afternoons at Oldies/WLDE (101.7fm, Fort Wayne) is now the new assistant producer for the Scott & Erica morning show at Mix 105.1 (WOMX) in Orlando, Florida.

Where are they now, Part 2? Former WOWO/WONO sales guy Steve Warden heads back to journalism, as sports writer for the Fort Wayne Journal-Gazette.

Northwest

A note from the TV side: Cutbacks at WLFI-TV (Channel 8, Lafayette [CBS]) have forced out VP/GM Mike Piggott and 16 other full- and part-time employees. Piggott has been VP/GM since December, 1998, but has been at WLFI since 1984. According to the _Lafayette Journal and Courier_, the positions were eliminated, effect 20 November, to reduce duplication between departments. LIN Television (owners of WANE-TV in Fort Wayne, and WISH-TV in Indianapolis, among others), purchased WLFI from the Toledo Blade Co., in December, 1999.

Where are they now? John Flint, former OM/PD at Oldies/WILO & AC/WSHW (1570am, 99.7fm; both Frankfort) was recently named PD at KIXY in San Angelo, Texas.

Central

A format change in the Anderson area, as Hot AC WHTI/WHTY (96.7fm, Alexandria; 93.5fm, Hartford City) flip formats to classic rock as "The Max". Tom Willhoite is the new PD of "The Max."

Doug Zook is new to mornings at News-Talk/WHBU (1240am, Anderson). Zook was formerly the GSM at WHBU, but is now the GM, morning host, and will do some sales.

New to mornings at Classic Rock/WKLU (101.9fm, Brownsburg) is Dan Somers.

Bob & Tom news: They move stations in two California markets: KHOP to KHKK in Modesto; and KKDJ to KDFO in Bakersfield. Also, they add WFXZ in Wilmington, North Carolina. Finally, the cat is out of the bag concerning Louisville: They'll be heard on Classic Rock/WQMF (95.7fm, Jeffersonville).

Westcentral

Dave Kersch is the new GM at Alternative/WZZQ (107.5fm, Terre Haute). Kersch was last at Country/WACF (98.5fm, Paris, Illinois/Terre Haute). Also, Kyleigh Todd replaces "Little Timmy" in middays.

Southeast

Modern AC/WZTR (98.9fm, Salem) flips to all Christmas music. Also, they debut the Rick Dees in the Morning Show, from KIIS-FM in Los Angeles.

Southcentral

Greg Scott Fisher departs as PD and afternoon guy at Country/WQKC (93.7fm, Seymour). After almost 11 years at WQKC, he'll be entering the pastoral ministry, at a methodist church near Vincennes. Back at WQKC, Carol McIntosh will take MD and Fisher's afternoon spot.

Jeff Weber departs as GSM at News-Talk/WGCL and AAA/WTTS (1370am, 92.3fm; both Bloomington). He'll be GSM at WZBA in Baltimore, Maryland.

Southwest

AC/WDKS (106.1fm, Newburgh) adds the syndicated Rick Dees In the Morning show, from KIIS-FM in Los Angeles. Dees replaces the syndicated Bob & Sheri show.

(!) You're releasing it into the public domain by sharing it now, here, in a public forum. Doesn't matter, though; see below.

>Since more and more stations are getting caller ID why not devolop a
>caller ID compliant database that flags habitual prize hogs for the
>talent to use when taking calls?
>
>It could also keep track of abusive callers, again to weed out at the
>talents discretion.

There are too many people who have outgoing caller ID blocked to make this a practical idea.

The pattern is correct.

KTAR protects St. Petersburg, FL and Portland, OR, and these two stations
mutually protect KTAR.

Every other station on 620 provides specific protection to KTAR.

I don't think that caller ID is not reliable enough to provide a good
"weed out" service. There are too many ways/reasons that you won't get
accurate info when someone wants to get through.

* caller blocks the number manually or uses a line that is perma-blocked
* caller uses multiple phone lines to spread the load
* call originates from behind a PBX, so all calls appear with the same
CNID (calling number ID)

This is not to say that you couldn't track the calls, based on CNID, but
using this to flag problem callers (esp for contests) will only catch
a few of them. Probably not worth the effort.

YMMV,

z!

Whatever its economic viability may be, free digital delivery of a third party's intellectual property into a device that permits repeated enjoyment on demand has only the most superficial similarity to the showcasing of music in a record store.

A little late for the million dollar prize and the patent claim. Most of the call screening software I've seen has caller ID capability. How you use it is up to the station, given the incomplete information often received.

Also caller calls from friend's house, cell phone, payphone etc.

Yet, by the same token, this would be easy with something like MS access. The key would also be other fields: name, address, age, zip code, etc. You could set it up so that any of those criteria could be valid. Then, as long as you know the answer to any of those, you know when you have a (potential) prize pig.
Unfortunately, if they are the legitimate "9th caller" and have not won in 30 days, they are also a legitimate winner. Being sure to have a promo with all rules on them air once in a while is also sufficient to claim that the winner broke the rules and you made reasonable effort to inform the listeners of all rules. Then the key is to determine when you are selecting a line with someone who last won 31 days ago, but you would rather not see win. Not much you can do about that without "reverse cheating" if you will.

However, if (as many stations do) you use an 8xx toll-free number for
call-ins, any good carrier will provide real-time ANI for an modest
fee, which could be used for the same purpose and cannot be blocked.

Particulary the first time you accused some poor soul listening at work of being a prize pig, when one of his 450 co-workers using the same phone won last week. Ill will....Not needed. Just check driver's licenses at prize pick-up. This guy just wants to make everything harder whilst making a shekel or two for himself. Not gonna happen....

john cline ii who thinks our problem solver had best invent more practical solutions, develop them, and sell them, not post obvious ideas to the Internet in some weird notion of thereby claiming them!

That's the nature of business. If you can't afford the cost of
gasoline, running a Taxi company isn't viable.

> There isn't really enough of an audience to justify
>paying any fee worth collecting, and I can imagine that paperwork requirements
>might make the situation worse.

If there isn't enough of an audience to make it viable, why should the
people who create entertainment content be forced to subsidize it?

Webcasting needs to be held to the same standards of business as any
other business. You create a product with raw materials (that you pay
for) and mix those materials into a viable product for which consumers
or advertisers will pay. If they won't pay, your product isn't needed.

4953. SD Radio: Pay for Play Weekend

Newsgroup: rec.radio.broadcasting
Date: 2000-12-19 01:03:38 UTC
From: David Tanny <davidtan@cts.com>
Message-ID: <t3tcvajmrqhq1d@corp.supernews.com>
Source record: 16609

KIOZ Raises $31,000+ For Toys For Tots/Pay For Play Weekend

The FCC calls it payola. The IRS calls it a tax writeoff!

Hard heavy active rock KIOZ 105.3 suspended its format December 15th for about 52 hours in order to bring you an eclectic
mix of bubblegum pop, demented novelty, corny country, classic new wave, and, well, more hard rock as well!

This odd mix of music is for one good cause: The "Pay for Play/Toys for Tots Weekend" raised over $31,000 for the Toys for
Tots charity. In order to raise money, there were three avenues the station chose.

First and foremost, B.C. and Woody, Shannon Leder, Mikey, and others asked the listeners to request any bleepin' song for
them to play in exchange for a pledge of at least $25, but if they couldn't find the song, they asked the caller if they would like to
donate anyway. The disc jockeys fit in as many odd requests, as well as some hard rock songs for good measure, as they could in
the 52 hour marathon of mad rock and crazy music. They played some odd Japanese punk band, a Britney Spears song, some
Barry Manilow, Frank Zappa, Michael Jackson, Village People, Napoleon XIV, The Fresh Prince, Chuck Berry's "My Ding a
Ling" song, Showdown's "Rodeo Song", The Waitresses, The Clash, and Weird Al Yankovic, which was requested by yours
truly and played at, well, 2:27!

The listeners were in control all weekend as they drove the station out of control with many odd song requests that painted a
mixed-up audio painting of total musical anarchy.

The second avenue for donations was getting hte local bands to buy up some airtime to get their own musical compositions
exposed on KIOZ, reportedly more expensive during the higher listening periods.

And third, many rock and roll items were up for auction including autographed guitars, drumsticks, and whatever else was there.
People came to Cane's Bar and Grill in Mission Beach to see the items up for auction, as well as to make cash pledges in person
for song requests.

Apparently, KIOZ may have gone a bit overboard when they played a hard punk band shouting out expletetives during noontime
Sunday. I guess the censor with the bleep button was too busy watching the cellar-dwelling Chargers lose to pay attention to the

lyrics.

Support good music. Quit buying the bad songs!
Listen to DFSX Comedy Radio: Paste http://166.90.143.141:8572/ into WINAMP Open dialog!
Al-Team #80 (alt.music.weird-al) http://www.davesfunstuff.com/ for South Park, Radio/TV, Dr. Demento, Today in History, Funny Stuff, "Weird Al" Yankovic, Icons, Eight is Enough, TV Guide Parody, Celebrity Birthdays, etc.

<< >Since more and more stations are getting caller ID why not devolop a caller ID compliant database that flags habitual prize hogs for the talent to use when taking calls? >>

You don't need any software besides your brain to weed out prize pigs. All you need is to answer the phone with one simple sentence: "Who is this?" When they identify themselves and you recognize them as a prize pig you tell them, "Sorry, we already have a winner" and move on.

Of course if you get caught running rigged contests like that you could end up with a fat fine and may get your ass sued, but radio is a business for liars and losers so most should have no problem with questions of ethics.

There was a program called ON AIR Software, and one of the functions was a good contest pig weeder-outer. It used Social Security number...tracked the person, when they last one, what they won, and sent a red flag up if they won within the last 30 days.

What is a "cybergeneration?" What years does it cover? If you're in your 60's and spend all your free time online do you qualify? If you do will the music please you?

You really have to define it a little more precisely so those of us who have been online for 20+ years can determine if we're as cyber worthy as those who been involved for a year or two.

I've got a feeling that cybergeneration wouldn't include people like Bill Gates, Larry Ellison and others who actually helped create cyberspace. Will we be required to wear nose, nipple and bellybutton piercings to be admitted to this very select and trendy generation?

To me, the cybergeneration should include everyone involved in computing rather than a limited age group you can pin some music on.

ANI can't be blocked... but IIRC it delivers the -billing- number, not the calling number. OK for single line households, but not for multiline installations, such as the aforementioned 450+ person office.
You also need more (and more complex) equipment to catch the ANI. Then there's the fee, too.

Best to stick with something like the person's drivers license at prize pickup.
(BTW, using the SSN for something such as this is definitely not kosher.)

>Best to stick with something like the person's drivers license at prize pickup.
>(BTW, using the SSN for something such as this is definitely not kosher.)

Or legal. Use the driver's license number.

<richbwood@compuserve.com> writes:

>>What setting a fee for netcasting music does in effect is to make netcasting
>>economically unviable.
>
>That's the nature of business. If you can't afford the cost of
>gasoline, running a Taxi company isn't viable.

For most taxi operations, the major cost is the taxi medallion, the gas is just basically an afterthought. I also note for most big city taxi companies, the driver ends up paying for the gas. Interesting analogy, but it fails on more than one level, not least of which is that some form of fuel is necessary to move a vehicle, but just having gas doesn't make one capable of accepting fares and moving passengers.

>> There isn't really enough of an audience to justify
>>paying any fee worth collecting, and I can imagine that paperwork
>requirements
>>might make the situation worse.
>
>If there isn't enough of an audience to make it viable, why should the
>people who create entertainment content be forced to subsidize it?

They aren't being forced to subsidize it, that's the funny part. Publishers and other Intellectual property holders in part depend on exposure to make money from their intellectual property. Not many publishers for example can just put a new CD in several stores without advertising and exposure on MTV/BET et al, and that's a major consideration. In fact, looking at the apparent schedule of fees for a non-commercial station to "webcast", the goal seems to be to limit the exposure of the material, rather than any attempt to garner revenue. The other point to consider is that one can actually measure how many people at any time are listening to a webcast, the same rate that WOR would pay per thousand for music might be reasonable, but remember there are usually less than 200 folks listening to any webcast, and the fidelity can be and often is less than a low fi radio broadcast. The other point to consider is that foreign webcasts are still available and NOT subject to the same fees.
>Webcasting needs to be held to the same standards of business as any
>other business. You create a product with raw materials (that you pay
>for) and mix those materials into a viable product for which consumers
>or advertisers will pay. If they won't pay, your product isn't needed.

Most of the webcasts I listen to aren't done by just webcasters. I for example like to listen to CBC One, it's already paying to use the intellectual property, and the 250 or so other listeners that it can get over the web just aren't a viable market. Webcasting before it could possibly conform to what

you suggest, would need thousands more in possible and real audience. Internet advertising hasn't worked well so far, and it's not likely to work well enough to generate the income necessary to pay the fees you are arguing for. The other point to consider is that I'm beginning to see small artists who avoid the large intellectual property enforcers in favor of either trying to collect their own fees, or just foregoing their fees in the name of getting exposure. Either approach becoming common has lots of problems, remember that the 40's had a real problem with a similar issue and recordings played over the radio, the publishing houses in effect kept studio bands alive after they were no longer needed.

Let's note that if the prize is of any reasonable value, the prizewinner has income, income the station awarding the prize is required to report to the IRS and possible state/municipal taxing agencies. To do meaningful reporting, the SSN is certainly required.

> Whatever its economic viability may be, free digital delivery
>of a third party's intellectual property into a device that
>permits repeated enjoyment on demand has only the most
>superficial similarity to the showcasing of music in a record

Using the same argument, radio broadcasting of music should be banned too, since many radio stations broadcast music which can be recorded, and then played back. Ever heard of a cassette recorder, an item which most folks have if they don't have an even better method of recording. It's the same argument that music publishing companies tried to use against other digital recording methods, and quite frankly, the folks who do record as you suggest, probably aren't going to buy the product anyway.

My point was that cutting off the ability to put music on the web by imposing fees doesn't do much for the publisher or the intellectual property owner, all it does is make it a lot less likely that the property gets additional exposure. Sure folks can archive the web broadcast, but most don't bother to. The concept of intellectual property is going to have to change in the near future, it's become all too easy to duplicate such things, and the existence of the technology implies that it will be used. Despite for example the likely ability to infringe on intellectual property rights with a photocopy machine, said machines are available all over the place, but books still exist and still get published.

> a line with someone who last won 31 days ago, but you would rather not see
> win. Not much you can do about that without "reverse cheating" if you will.

And you're also running a crooked and illegal contest if you do that.

A few years back, here in Boston, a guy managed to win a Jeep Cherokee in an annual contest run by a local TV station- he didn't break any rules, but did some unorthodox stuff to win . Without getting into details in here about what he did to win, the TV station announced that the rules were changing the next year to prevent this from happening again. However, the guy "won" the Jeep. They still had to give him the prize, because he played by the posted and published rules, and the TV station discussed that if you do not play out a contest by the rules you've announced, you could get into trouble.

Another question occurred when a large FM station had a contest to win a trip for two to Bermuda. A 14 year old kid won the trip and the station suddenly decided that it couldn't award the prize to a minor. However, the kid's folks threatened court action, because there was nothing in the rules that said that entrants had to be over 18 to enter and win. At that point in time they gave him the trip.

The most embarrassing contest had to be one that took place in New Hampshire this last summer. The not-so-well-loved Diana Ross put together a "Supremes Back to Love Tour". As you may recall, Ross and the two Supremes who were in the group when she left - Mary Wilson and Cindy Birdsong - could not agree on money. So, her "Supremes" were going to be two unknowns who had been part of the "Supremes" group long after Ross, Wilson, and Birdsong had moved on. The public was not pleased and this was reflected by the horrendous ticket sales. By the time the tour got to Boston it was cancelled. However, the New Hampshire station (the only one promoting the tour) had a contest and the "Grand Prize" was a limo trip to the show and accomodations at a fancy Boston hotel, the red carpet treatment, etc. The concert was cancelled . I believe the winners received another comparable prize, and the events were beyond the control of the station, but it still was embarrassing.

Not something you'd want your station hooked up with.

Merry Christmas for all SWR friends!

I just wanted to remind you about our Special transmission starting 24th December 22 UTC (Christmas Day 00 local time). We also have A SPECIAL TEST #3 for our transatlantic listeners in North America as well listeners in Far East in Asia. We will turn our half wave dipole antenna toward 320 degrees at 22 UTC on Christmas eve and we turn it 220 degrees at 6 UTC, when reception in Europe is starting to be possible (If weather is bad, our technician refuses to climb into tower and test will be cancelled. In that case antenna direction will be at 220 degrees.).

Our Frequency schedule for 25th December broadcast:
22-00 UTC (24th December) 11690 kHz, 00-05 11720 kHz, 05-12 11690 kHz, 12-16 11720 kHz, 16-20 UTC 1690 kHz, 20-22 11720 kHz

Not much details for the programmes itself are not available at advance. Many of us are visiting airwaves during that day, but exact times are not very well known (Family reasons, etc. It's Christmas, you know.)

At 20-21 UTC there is "Post Ludlum to Christmas - J�lkisoitto joululle."
Music programme with interviews presented by Toni Collin, Juha M�kinen, Tero Pasanen. This is the first part of series of radio shows presented by students of Polytechnic of Pirkanmaa's subsidiary in Virrat. Students will be hosting radio shows in SWR in January and February broadcasts.

Mr Jari Perki�m�ki have made very comprehensive reception forecast for us. Check your best reception time from our website.

As usual, all reception reposts are most welcome. You can send it via our website www.swradio.net, by e-mail raportit@swradio.net, or via traditional mail: SWR/Reports, P.O. Box 35, 40321 JYV�SKYL�, FINLAND. Please note: We CAN NOT verify reports without return postage of 2 USD or 2 IRC (correctly stamped.) This applies to also Finnish reports too! Reports via e-mail or our website can be verified in our website. (As you might already know).

You can also call us by phone, our number +358 400 995 559 is on use during transmission. Also SMS -messages is welcome.

Let's meet on 25 metres!

If you had read closely what I said, I said there are times you are stuck with awarding the prize to a prize pig. If the rules are made public in advance AND include the standards like: "One winner per household no more than every 30 days, etc..." Thus any software that screens for that and determines that the caller is NOT a legitimate winner is legal. And so is the contest! If you want to acknowledge the discrepancy on-air or not is another story. Most places would just continue the contest longer.
As you aptly point out, sometimes a prize has to be awarded to someone who is "not the preferred winner." It is also true that sometimes the winner is not a legitimate winner. What makes it an illegal contest by catching that?

I was working at a radio station that gave away a trip to see
Coverdale/Page in the US, but the US tour was cancelled and C/P
instead toured Japan. I don't know how it was resolved, but I'm pretty
sure the listeners weren't given round trip to Japan.

No need to get snippy, governor, yes I have heard of cassette recorders. They don't tend to be used typically to capture ambient music in record stores as a means of avoiding payment for a showcased album; and that was the only comparison I was challenging. And I didn't say anything should be banned.

Anyone disseminating intellectual property beyond the accepted standards of fair use should do so under rights and license granted by the copyright owner. Rights organizations, as representatives of the owners of copyright, should set prices that consider such factors as

breadth of dissemination...
fidelity and bitrate
ease and lossiness of possible end-user recording
compilation value (don't broadcast entire albums, don't announce in advance)
and absolutely whether an intended use is expected to enhance or hinder album sales.

But that's content owner's choice. Neither radio nor webstreamers nor record store should assume an entitlement to the free dissemination of another's work, no matter how effectively they believe it promotes.

I realize this thorough economic analysis of Taxi company operation is
fun. However, if a taxi driver can't afford gas he can't afford to
lease the taxi and the taxi owner makes no money. It's a sort of
"trickle up" effect.

"Another question occurred when a large FM station had a contest to win a trip for two to Bermuda. A 14 year old kid won the trip and the station suddenly decided that it couldn't award the prize to a minor. However, the kid's folks threatened court action, because there was nothing in the rules that said that entrants had to be over 18 to enter and win. At that point in time they gave him the trip."

Something similar happened on The Dating Game in the 1960s -- a young lady won a New Year's trip to London with the lucky bachelor she picked (Jerry Mathers of "Leave It To Beaver"), and the show's staff didn't find out that she was under age until shortly before the trip, long after the show had aired. Their solution was to send someone from the production staff as a chaperone.

Hi Doug,

there are several companies that provide streaming audio/video. The main
problem is
the bandwidth. the more listeners you have the more bandwidth and traffic
you need.
One of the greatest providers is www.real.com , but you can also look at
www.shoutcast.com .

You want stations to broadcast your content? Don't even bother thinking about video at this point. You probably can't afford the 2-3-5-10 megabits per stream that it requires for broadcast quality. For audio, think in terms of at least 150K per stream... In other words a big chunk of a T1 for each connection.

Figure a big pile of dead presidents for the Telephone company, a big pile for a really big router, and one honking big server to handle more than one stream.

>to be >a "dance" format. If you're into that, I guess you qualify!

Pierced noses, nipples, bellybuttons and wooden shoes aren't mutually
exclusive. Ever been to the East Village in New York?

I know several 40 somethings who, at one time or another, wear some or
all of the above and spend a lot of time in Internet Cafes. I'm simply
suggesting that you can be a member of the cybergeneration and still
like The Grateful Dead and tie-dyed shirts.

20 somethings seem to think they're the cybergeneration and I
disagree. 40 somethings can look as stupid and behave just as badly as
20 somethings. The cybergeneration isn't a chronological concept. It's
behavior and the willingness to consume huge amounts of processed
sugar.

Let's do another analogy. If exposure of a product is enhanced by theft of that product then General Motors should be happy when cars are stolen from dealers' lots and put on the road. There's much more opportunity to showcase a moving vehicle than one sitting dead in a lot. By your standard they should reward the thief instead of dumping him in the slammer.

Since you didn't like the Taxi analogy, maybe this one will work.

$INCLUDE 'std-disclaimer' ; may vary from state-to-state

Although many states use the SSN format for DL number, you are in no way
required to even -have- an SSN to get a license. If you don't have a number,
or refuse to give one, then they must make up a number for you.

The same is true for insurance companies that would like to use the SSN
as a personal ID number (which is IIRC prohibited by the SS admin). I
have a made-up number which will fail the SSN "checksum" test, that I
use for everything that isn't social security or tax related.

See http://www.cpsr.org/cpsr/privacy/ssn/ssn.faq.html for more info.

Yes - if you post the rules, announce them, and someone wins who is a prize pig, and you award the prize to him/her, you're OK.

> It is also true that sometimes the winner is
> not a legitimate winner. What makes it an illegal contest by catching that?
>

My comment on an illegal contest was based on quoting someone in here who said this:

>
> > > listeners of all rules. Then the key is to determine when you are
> selecting a line with someone who last won 31 days ago, but you would rather
> not
> see win. Not much you can do about that without "reverse cheating" if you

Eliminating someone who is within your rules, but you would rather not see win.

That would, as far as I know, be illegal.

I guess you could ask any broadcast communications lawyer this question, and you'd probably be told you're afoul of the law if you choose not to select someone "you would rather not see win".

$63M buys 5 Tucson Radio Stations
By Tiffany Kjos
ARIZONA DAILY STAR

The music stays the same with the sale of a radio empire led by KIIM-FM, but a man who has helped shape the industry in Tucson will step aside after 45 years.

"It's business as usual. I just won't be there," said Jim Slone, founder of Slone Broadcasting Inc. and Slone Radio LLC.

Slone sealed the sale of his five stations Thursday with a national radio giant that has local roots: Las Vegas-based Citadel Communications Corp., founded in Tucson in 1984 and now owner of 143 FM and 66 AM stations in 44 cities. Citadel bought Slone Radio, which employs about 60 full-time and 20 part-time workers, for $61 million in cash and $2 million in Citadel stock.

Along with country KIIM-FM, Tucson's top-rated adult station, Slone's stations are KHYT-FM, KOAZ-FM, KCUB-AM and KTUC-AM.

Slone said the first thing he plans to do now is go thank the woman, Leola Randolph, who gave him his first job in the business at a radio station in eastern New Mexico. She now lives in a nursing home in Lubbock, Texas.

Then, he said, "I'm going to loaf. I think I'll be real good at that. I want to be the loaf king."

Slone's children will continue to work for the organization. Jamie Slone is contracted to remain general manager for up to two years, Fred Slone will continue as national sales manager, and Mary Slone Wambach will maintain her position as half of the popular Max and Mary morning show on country station KIIM-FM.

"The way we operate is we run it very autonomously as a local business," said Citadel CEO Larry Wilson. "Jamie will be calling the shots."

James A. Boyle, a radio analyst with First Union Securities in New York City, said Citadel is a premier mid-market operator. Boyle said he would expect no major changes in a Citadel takeover.

"Since radio is so people-and- management intensive, you can't do that if you disrupt successful management operations," he said.

The sale follows a nationwide trend of large corporations buying independent and family owned stations. Slone held out for years, vowing not to sell unless his children agreed to it.

"I had always said I would never sell my stations as long as my children didn't want me to, and I was true to that," Slone said.

Citadel's Wilson, born in Coolidge and a 1972 graduate of the University of Arizona College of Law, started Citadel in Tucson in 1984. In 1988 he sold his two Tucson stations, then KAIR 1490-AM and KJOY 94.9-FM. He said he has wanted to return ever since.

Slone Radio is one of four major radio groups in Tucson. The others: Journal Broadcast, Big Broadcast, Clear Channel and Lotus Communications.

"I think if you're just in one market and you're up against markets all over America, they've got an idea bank that's a lot bigger than yours. They can buy things cheaper," Wilson said.

Julie Davey, a partner at the media buying firm Dark Horse Media, said the local broadcast industry has expected a Slone sale for some time.

"We've been saying in this office for years that this was going to happen. It was a matter of when. We knew the price was going to be extraordinary for them to sell, because they love the business," Davey said.

Slone came to Tucson in 1963 as a disc jockey at KHOS 940-AM. He started in radio 45 years ago as a freshman in college.

He grew up 35 miles from the nearest town, Portales, N.M., and recorded four records as the lead singer with a group called The Shy Guys.

He did not intend to get rich, Slone said, but is grateful for his career in what he calls an "exciting and joyous" industry.

"Al Gore stole my line when he made his concession speech, and I thought it was a wonderful line: 'It's time for me to go.' And I thought, 'Al, that's what I was going to say to the staff when I was leaving the station.' "

Message-ID: <t4aoc08p93r8ec@corp.supernews.com>
Source record: 16507

From the Friday, December 22, 2000 edition of the M Street Daily Fax: CBS Radio Networks will change the CBS news sounder (opening jingle) at 12 noon Eastern time on Tuesday, December 26. The tune will be the same, but the instrumentation will be different.

The story notes that the current sounder is "decades old." I remember it from about 1970 and it probably goes further back than that.

I wonder if the time tone, which airs just before the sounder, will be preserved.

Greetings All. Let me introduce myself! My name is Scott & I do a crazy little thing called The Nuclear Warrior Show. I'm =planning= a week long campaign of 15 seconds spots on a fab little Radio Station here in New York. I'm intending it to become the biggest event in the History of Radio, as I boldly pronounced ^above.^

The Nuclear Warrior Show features what I like to call "the World's Only Original Words & Music."

But believe it or not, currently there is turmoil on my "day job;" I'm the janitor at the local McDonald's don't you know ;-) & there might be some layoffs next week so I don't know exactly =when= this biggest event in the history of All Humanity will now exactly commence.

If anyone's interested in the main websites of this project please request.

Cheers & many thanks!

Scott :-)

5003. WTOP Now Broadcasting on WXTR 820 AM, Frederick, MD

Newsgroup: rec.radio.broadcasting
Date: 2000-12-25 05:52:20 UTC
From: Ken Reigner <cbsmedia@earthlink.net>
Message-ID: <t4do4k143ovadf@corp.supernews.com>
Source record: 16509

Fellow Radio Buffs:

I just discovered when listening to the radio yesterday that Bonneville's all-news CBS affiliate WTOP, Washington, D.C., has added a third broadcast station to form the WTOP Network. Now the station will be broadcasting on its original 50 kw frequency, 1500 AM, Washington; WTOP-FM 107.7, Warrenton, Va.; and WXTR 820 AM, Frederick, Md.

Yet, when I tuned to 820 AM, I found different programming. I was listening in Northern Prince George's County, a Maryland suburb. Could there have been another 820 AM station received in that area? Or has WTOP effected its simulcast operations yet?

Anyone have any further information on this link-up? Anyone know of a similar trimulcast operation elsewhere in the United States?

Enclosed is the announcement from the WTOP Web page <www.wtopnews.com>.

Sincerely,

Ken Reigner

WTOP Radio Adds Third Frequency to Radio Dial

Traffic, Weather and News Now on 820AM

Right now you can hear Washington's News, Traffic and Weather Station, WTOP, on three different radio signals: 1500AM, 107.7FM and 820AM in Frederick, Maryland.

"Our first two signals cover the entire Washington Metropolitan Area, except for a large portion of fast-growing Frederick County. Adding 820AM covers the entire county, and it improves our coverage in northern Montgomery County and eastern Loudon County," said Joel Oxley, Vice President and General Manager of WTOP.

"We've received scores of e-mails from commuters up in the Frederick area saying that they want to be able to hear WTOP traffic, weather and news reports first thing in the morning, not just when they drive closer to DC. Their wish is coming true."

Oxley added, "I don't know of another radio station in Washington broadcasting on three different radio stations. This moves WTOP from a simulcast to a trimulcast. Actually, if you consider that we stream the

audio of WTOP Radio on the web, that makes four ways for Washingtonians to listen to us."

Separately, WTOP also programs an Internet-only all-news station, WTOP2. WTOP2, also known as Federal News Radio, is a partnership between WTOP and the Associated Press, broadcasting news about the federal government.

Like WTOP AM and FM, WXTR 820AM in Frederick is owned by Bonneville International Corporation. It currently broadcasts country music and sports.

In article <t45oalm92e2s9b@corp.supernews.com>, Rich Wood
<richbwood@compuserve.com> writes:

>I realize this thorough economic analysis of Taxi company operation is
>fun. However, if a taxi driver can't afford gas he can't afford to
>lease the taxi and the taxi owner makes no money. It's a sort of
>"trickle up" effect.

But Rich, the equivalent of intellectual property for a cab is the medallion to operate the cab, which many owners then lease to cabdrivers, however also note that most such operations require on artificial limitations on the numbers of medallions in order for the intellectual property equivalent to make money for the equivalent of the intellectual property holder.

I thought it through, I didn't want to carry this on ad infinitum. You'll note I'm not advocating that those with intellectual property give up their rights, however I also note that making a recording and selling a recording implies that others can listen to said recording. I mentioned the old record store connundrum precisely because certain intellectual property agents tried the shortsighted approach I mentioned of suing the record store and won for a while. I don't know how property rights get enforced 100% in an age when almost anyone can duplicate the property without detection and said property can be sent from one locale to another easily. When printing presses were relatively rare, it made sense to limit the amount that could be copied without producing a need to negotiate with the chap who wrote it, or the organization the author had sold some of the right to distribute it to. When audio recording first became possible, it made sense in some ways to get paid for the usage with the caveat that radio probably would have been valuable to most recording artists and song writers even if BMI et al hadn't come into being. The point I was making, and it's one you're aware of is that any set of fees which is excessive doesn't make economic sense in the long run. The webcaster with 200 - 250 listeners just can't generate the type of royalty base that even a small market religious station has, and we know that such stations pay a lot less than the same format in the NYC market. You'll note I haven't once claimed that no respect for intellectual property should exist. Instead, I note that they seemed to be pricing themselves out of the US webcasting business, leaving of course all of the foreign servers which will exist because the holders can't reach them to demand payment easily.

Driving in the car today, I was startled to hear an ad urging listeners to tune into Airwaves-dot-com. Think it was a network spot, too.
Turns out there's a dash between "air" and "waves."
Don't bother: air-waves.com is a site touting mobile phone accessories. I wonder how many hits the radio site will get by accident. :-)

Holiday best to all

A guess, and only a guess, since I am not in the listening area and
have only heard WTOP via the Web: I know WXTR had some sports
programming, and perhaps their commitments to this programming means
they have to break away from the simulcast at times at least for the
next few weeks. Did you hear a football game or something?

Certainly, as webcasting grows (which it will), BMI et al will figure out a way to set up payments to maximize their return.

The market will find itself. It may take some time, but it will.

Keep in mind, however, that the copyright acts were designed - with the help of the US Constitution (copyrights are dealt with in the Constitution, believe it or not) to provide an incentive to keep producing intellectual works. They were NOT designed to "guarantee a piece of the action" at every place where the work is used.

This indeed might be a more honest arrangement for all
involved. Listener-supported pay radio will depend heavily for
its ecological niche on commercial AM and FM radio becoming
increasingly indistinguishable from an advertising flyer.

Record companies are only too willing to pay for play. The problem is that they want stations to take money to play the songs that they are having trouble making hits out of. They know that between radio, clubs, MTV and other platforms that the boy bands and superstars will always sell. The problem is breaking new acts or reviving failing ones.

Back in the times of the various payola investigations, it could be seen that the payments to jocks and PDs was to get play for songs that were stiffing, not for natural, out-of-the-box hits. Why pay for what you get for free?

They'd be promoting NBC's television brand at the expense of
their own, an act of certifiable insanity.

NBC itself will be returning, in a manner, to radio via CNBC on
Sirius. I wonder if this required any negotiation with Infinity.

ASCAP and BMI have already figured radio out. They go for a percentage of the ad revenues derived form the programming tha tuses full or incidentally the music in the repertoires. This seems to cover netcasting revenues, too.

The issue in the recent rulings has to do with the owner of the rights to the individual phonograms, not the words and music in their original form. ASCAP and BMI license author and composer rights, the RIAA controls phonograms (the artist-specific recordings) which currently do not pay royalties for broadcast as broadcasting is not digital (yet) and does not come under the digital transmission laws.

I listened to WCBS NewsRadio 880 today and I =didn't= hear any change in the Sounder.

I'm not saying it didn't change, I'm just saying I didn't hear any changes. perhaps it DID change I just missed it.

Sorry i can't help you further with this.

Scott :-)

They'd be promoting NBC's television brand at the expense of
their own, an act of certifiable insanity.

NBC itself will be returning, in a manner, to radio via CNBC on
Sirius. I wonder if this required any negotiation with Infinity.

Jerome
(yes, I changed the apparent typo in the subject line)

> concept!

Record companies are only too willing to pay for play. The problem is that they want stations to take money to play the songs that they are having trouble making hits out of. They know that between radio, clubs, MTV and other platforms that the boy bands and superstars will always sell. The problem is breaking new acts or reviving failing ones.

Back in the times of the various payola investigations, it could be seen that the payments to jocks and PDs was to get play for songs that were stiffing, not for natural, out-of-the-box hits. Why pay for what you get for free?

I do that crazy little thing called the Nuclear Warrior Show.

Last night the DJ said he needed "another fix" of my music, and who at all could blame him, why, I'm the biggest thing the entire Radio World has ever seen! :o

I WAS on the phone with this particular DJ last night; I don't want to tell you his name right now because I don't want to jinx myself; but I told him I can't hear HIM while my music is playing. So I don't know what I'm gonna do :o Any suggestions? I mean when he says "cut" I have to "cut," right?

Please help me anyone within a couple of hours or so please answer this post.

Many thanks!

Scott
The entire Music World's on his way OUT, thank you :o

A guess, and only a guess, since I am not in the listening area and
have only heard WTOP via the Web: I know WXTR had some sports
programming, and perhaps their commitments to this programming means
they have to break away from the simulcast at times at least for the
next few weeks. Did you hear a football game or something?

5028. Digital Audio Broadcasting - DAB

Newsgroup: rec.radio.broadcasting

Message-ID: <t4hhmm3lbdo45f@corp.supernews.com>
Source record: 16534

Having lived with our Arcam Alpha 10 DAB Tuner for almost a year, there is no way we should ever want to go back and listen to FM radio. Indeed, the comparison between DAB and FM is like that between AM and FM.

If anybody out there feels the same, please let us know. Perhaps we could start a DAB User Group?

However, there is a downside to DAB. While the majority of BBC radio is free from the compression that wrecked FM in the UK, most commercial stations are compressing their digital signals at source (the Arcam tuner allows the user to select from 5 levels of compression) with the result that instead of CD quality radio it's more of the same - overblown voices and music (DAB make no allowance for lousy programmes and poor studio engineering) that no one would want to listen to.

Yes, DAB tuners are expensive, but if want to know what DAB can be at its best, tune into BBC Radio 3. We like Late Junction (Mon - Thurs around 10.15pm) where we promise you won't be able to tell the difference between a broadcast and a CD!

PS: If Digital Audio Broadcasting is operational outside the UK we'd like to know.

Of course the problem here being that it will further concentrate the
action on the few big record labels that are able to afford the big
payments that would be demanded by the big city stations, leaving the
smaller labels and the performers they represent out in the cold.

>
> The story notes that the current sounder is "decades old." I
> remember it
> from about 1970 and it probably goes further back than that.

I remember first hearing the sounder in the summer of 1968 on newscasts. The first sounders were heard earlier in 1968, with one before feature shows (like "Dimension") and the sports sounder. Back then, the tease before the sounder was preceded with a sung "CBS Radio" jingle using that melody. The news sounder came along in the summer of 1968 and was followed by a commentary/analysis sounder (which may've been used for bulletins, as well) and a long-form show sounder ("Face the Nation," "Capitol Cloakroom," etc.).

> I wonder if the time tone, which airs just before the sounder, will be

Considering most CBS affils are news-talk, I would think so.

Source record: 16541

Well, I was listening every hour this morning (Tues 26 Dec 2000), beginning with the CBS World News Roundup at 7am (Central). While I *PREFER* the Sept.1968-May 1983 version of the news-jingle, I can "tolerate" the May 1983 thru 11am (EST) 26-Dec-2000 news jingle sounder. At least the 1983-2000 version had enuff of a melody that "resembled" the 1968-1983 version - it still had that "throwback" to the "1970's" version.

Then, at 11am (Central; 12-Noon Eastern), WSMB-1350 (Sportsradio, mostly carrying Disney/Cap-Cities/ABC's "ESPN Radio") gave their pre-recorded legal ID-jingle just before :00:00, and I then heard (AND WAS RELIEVED to hear) the "BONG" at :00:00 top-of-the-hour....

but then this AWFUL-sounding barely recognizeable (virtually no melody) NOISE! IT REALLY STINKS!!!! :(

Mr. William S. Paley must be turning over in his grave!! :(

So too must Douglas Edwards, Eric Severeid, Robert Trout, Harry Reasoner, Charles Kuralt, Dallas Townsend, etc...

and then what about those still living who were "let go" by the "corporate"
CBS-Westwood-Infinity-Unistar-Mutual-NBCRadio-Viacom-Paramount-whatever the heck they want to call themselves at any instant! :(

Such as David Jackson, Doug Poling, George Herman, and so forth...

(BTW, does anyone know if Richard C. Hottelet is still alive? What about Charles Collingwood?)

all of those 1960's and 70's era newsmen/newswomen, anchors, announcers, etc. who were with CBS News, or even just the radio side of the Columbia Broadcasting System... They MADE the CBS Radio and Television Networks (mostly in "news") a REAL CLASSY organization!

And I wish they would get rid of CBS-TV's "eye" logo for the CBS RAD)))|(((O Network.... the "eye" has NOTHING to do with RAD))|((O, but ONLY the CBS Television Network! The Radio side of CBS used that "wavelength" logo I'm using (as their letterheads did in the 1970's) inserted as the LETTER 'I' between capitalized 'D' and 'O' in the word RADIO.... They really need to go BACK to the REAL WAVELENGTH logo for the radio side....

and for their (mis)-"management" of NBC Radio...
(BRING BACK MONITOR! :)

WHAT THE HECK does a PEACOCK have to do with RADIO! It was ONLY intended (at least the 1950's-70's peacock) for COLOR Television of RCA/NBC. The "snake" logo, the "chimes" logo, even the 'N' logo should be the "generic" logo for BOTH NBC Radio and NBC Television, with the Peacock used as an alternate logo for (GE) NBC-TV, since TV is virtually all in Living Color now.....

Well, at least I have enuff TAPES of old-time-radio and old-TV shows, and there are websites with audio clips as well of older radio jingles etc.... I can live nostalgically with those radio/TV clips, without having to worry about what "today's" powers-that-be at corporate CBS-Viacom-Paramount-Westwood-Unistar-Infinity-CNNRadio-NBCRadio-Mutual (or what was once called Mutual) choose to do this moment or next! :(

| melody) NOISE! IT REALLY STINKS!!!! :(
|
To me it actually sounds like it has a bit MORE of a melody, less
of a synthesizer-kind of sound and more orchestral in nature.

I heard it for the first time at 10 am (PST) on KCBS. I personally
think the "An Infinity Station" tag that's been squeezed onto the
O&O legal IDs is much more offensive than the change in sounder.

| [Moderator's note: Come on, Mark, let us know how you *really* feel!]

I'm amazed that there's this kind of feeling about a radio-network
news sounder. Maybe there is hope for radio after all....

So they really did change the sounder after 1970? I thought I was hearing something different between the old sounders in various places on the Web(which I also have on tape from 1979) and the one used more recently, but couldn't put my finger on it. (Jeff Miller has some examples at http://www.geocities.com/Hollywood/Derby/6694/index.html -- which he just updated today to reflect the sounder switch.)

Some of you may know me as Scott Lifshine. I'm known for doing =The Nuclear Warrior Show= which just happens to feature the Greatest Musical Event in the History of All Humanity. btw my K ROCK Interview with "Crazy Cabbie" went terrifically last night, what with the Cabbie near the end of it saying, "This is the Greatest Piece of Music I've ever heard in my Whole Life!" Thanks, Cabbie! That's one of the warmest compliments I've ever received from ANYone regarding the Nuclear Warrior Theme Song! Did anyone hear this Historic Event last night right around this time? If so plesae resond to this thread, yeah that was ME!

Anyway the point I want to make here is if you want to talk about Radio I have aNOTHer startling Event in the History of All Radio with this OTHER Musical thing I do, called "California Jam." Apparently I'm the Only One on Earth who CAPTURED the California Jam Concert when it rolled into Town in early April 1974. Well, perhaps maybe =one= of the only people who captured the Long Lost & Forgotten GrandPappy of ALL Concerts the California Jam 1974. Either way I've YET to encounter ANYONE on the Internet who has this but me ;-) For a quick primer on the Groups who performed at this Lost City of Atlantis-like Concert here's a hyperlink to it: http://members.aol.com/dplist2/caljamad.jpg

Don Imus was the New York Delegate to the Event, now known as Cal.Jam and MY Tapes more recently have become known as the Stereo-WEREO. The field covered a SQUARE MILE OF PEOPLE for this One Day Show (can you fathom what a square mile of people looks like from the air? I don't think so unless you have the AMERICAN Wids which I recently acquired) And it was SO ridiculous that ABC-TV closed the ENTIRE Holiday Inn Motel at the Ontario Motor Speedway FOR A MONTH & A HALF to put on this made-for-TV Special which was also one of the first Simucasts ever. And this Event was SO absurd that they had to put additional speaker towers at THE THOUSAND FOOT MARK. I'd like you to read one of the only "official" articles written about this Helter Skelter Event right here: http://www.gambleboards.com/jamtext.htm

Notice as you read that there's nary a mention of the words "Computer" or "VideoScreen" ;-)

Well let me close for now because I already got one WAOL tonight & I don't want another!

Will continue on this thread, & many thanks for reading & commenting!

Scott :-)

5043. Re: The CBS Sounder

I programmed a station in Indianapolis back in the early 70's and although we had switched to a modified top 40 format, we still had to deal with a CBS contract.

Working around the newscasts wasn't too bad, but for almost a year, I was stuck with having to run Arthur Godfrey. We hated every minute of it and would drop in sound effects of frogs croaking, toilets flushing, etc, and break in with news for something as small as a leaf falling off a tree.

But what about all of those large public radio networks? Don't they count for something? In Washington state alone, we have Spokane Public Radio with several transmitters/translators in NE/Central Washington, statewide Northwest Public Radio... and a Christian station or two that broadcasts the same programming to every city in all of Eastern Washington. IMHO, when I sit to think about it, this isn't all that uncommon -- at least in the non-commercial sense...

Well Yes! Regarding the California Jam Concert--It was part of the ABC-TV series called "In Concert."

This thing was so absurd that ABC-TV made a Major Construction Project out of it! Sections of the Helter Skelter Stage were built atop Radilroad Tracks and Emerson Lake & Palmer had their own Helter Skelter Stage entirely. For an encore to the whole Helter Skelter Day of April 6, 1974, Keith Emerson started flying around the Stage with his entire Grand Piano, bench & All, upside down & all! Let alone THAT stunt, but when he started slowly rising up with the whole damn thing, the size of a truck btw, oh my GOD!

But the amazing thing is, y o y am I the Only One on Earth besides ABC-TV WITH the entire long lost Mother of ALL Concerts, the California Jam in the dazzling state of WEREO as it's suPOSed to be in? I'll never understand this :o And I REALLY don't know what the Big Secret about California Jam IS!

Cheers

Scott

Don't be. The interest is generational and limited to this group. Sounders are a link to the past. (I suspect Mark C. is more nostalgic for the 70s themselves than for 70s radio.) And they're actually loaded with meaning. BBC went from an arrangement of Lili Bolero...I believe a Scottish folk tune...that called to mind its Age of Empire...to a new theme with echoes of the old that calls to mind contemporary global authority, reach and conflict.

CBS's synth-hit sounder suggests what it is probably meant to...cheap dramatization, Foxification and speedup of their radio news.

> which he just updated today to reflect the sounder switch.)

There was a pre-Sept-1968 sounder (Jeff has it in the "Kennedy" stuff),

then the Sept-1968 thru May-1983 sounder... which *I* remember all thru
the 1970's, listening regularly to CBS RAD))|((O Mystery Theater, etc.
all those years (and Face-the-Nation, Capitol Cloakroom, etc... those
long-form features used their own 1970's-era sounders but with the same
melody)...

In mid-May 1983, the three sounders (all with basically the same melody,
but slightly different instrumentation styles) were ELECTRONICIZED, on
a synthesizor or whatever... all still basically with the same melody
as previously... The News jingle was PURE tone, single-frequency-pitches
(do-DO-DOOO-do-doooo).

About two weeks later, late-May 1983, the news jingle/sounder was changed
to what was heard all the way thru (and including) 11am Eastern...
the electronic/synthesized one, "pling-Pling-PLING-pling-pling), but it
had enuff "harmonics" in it to still resemble the 1968-83 version.

Jeff Miller has had this one at his site for several months as well, as
well as several examples of the 1968-83 version...
the "shorter" URL for his geocities pagew is:
http://www.geocities.com/jeff560khz

He has done many updates to his site over the past few days for Christmas
time.... many of the .ra's are now .mp3's... there are MORE (new) files
added, and existing clips which are now as mp3s are frequently enhanced
with longer clips! :-})>>>>

But now with the latest sounder/jingle (12-Noon EST Wednesday 27 Dec 2000)
it JUST does *NOT* sound like "CBS Radio" as I rmember it! :(:(

BTW, speaking of pages with sound-files, etc. of (network) radio
nostalgia:

There is the http://www.monitorbeacon.com tribute site to
(RCA) NBC Radio Monitor! FILLED with text articles and .ra files! :-)

WYRS calls were in Connecticut as a Jazz station. I could pick them up in New Jersey until Oakhurst came on in back of the Seaview Square Mall. BTW, they called themselves "Your Radio Station" "Y.R.S." get it? Probably the dumbest slogan ever! (since it's "yours", now pay the bills:-))

> 29. =93WEAT 850 Wonderful Country=94 from south Florida

850 WEAT has made many changes in the past several years. One of which was to change calls.
Sister WEAT- FM broadcasts on 104.3 as "Sunny 104.3". Years ago, they seemed as though they were the WPAT of South Florida radio with the similar Beutiful/Eazy format.

I really do enjoy a couple of the shows, like GutBucket Matinee & The Computer Show, & even Labbrish, but Habte seemingly refuses to have intellectual conversations with me on his show nowadays, perhaps because I have a serious agenda.

This is very humiliating. He carries on long winded conversations with people with far less important/intellectual topics than My Topic, The Nuclear Warrior Show.

So now we're never gonna hear the end of it that a couple of the high ranking people got fired from the station, I suppose. I TOLD them a long long time ago that the only way for them to survive is to have debates with ME! :o

Scott

>But what about all of those large public radio networks? Don't they count for something?

I don't think a three-station all-news *commercial* simulcast is all
that common.

Here in Northern California, Fresno-based newser KMPH-FM (licensed to
Visalia) simulcasts on Modesto's KTRB-AM and calls itself "The
Valley's Only All-News Radio". Though as of late, they've been more
of a news/talker, moving in nighttime and weekend talk programming
from now-defunct sister station KFRE-AM 940 after its flip to a Radio
Unica affiliate.

I would hazard a guess that WTOP is the only Top 10 market all-newser
doing this or even simulcasting with TWO stations. All-news formats
are scarce as it is in major markets, let alone on three frequencies.
It's my understanding that most Washington, DC AMs aren't worth beans
signal-wise, and that the multi-station cast is definitely needed in
that market.

Does anyone know if this program is still rerun anywhere? I remember listening to it when I was growing up in the 70's, with E.G. Marshall hosting. Are copies of any of the episodes available?

Paul.

I do know that one of the public radio stations in the Cincinnati area
(Xavier's???) runs it now. It has been stripped of the CBS ID, is
just called Mystery Theatre, but there is no mistaking Hyman Brown....

john cline ii who goes to Cinci quite frequently, largely due to the
presence of Paramount's Kings Island...

The World Radio TV Handbook is a very good resource for looking up radio stations, not only in the United States, but all over the world. It does not list ALL radio stations (i.e., low-power AM stations), but the higher power stations are listed.

The columns include station ID, Location (city/state), daytime and nighttime power,
day/night antenna patterns, hours/days of service, and license type.

It is a very good resource. I purchase one every year when it comes out. The 2001 edition should be, or is, out.

Another good resource is the National Radio Club.

Paul.

NPR was distributing it, and a few stations, including my local NPR affiliate WRVO-FM still run it. I can't find anything on NPR's web site, but see http://www.wrvo.fm/Radiomt.html for WRVO's page with links to a realaudio feed. (And note that cool domain, wrvo.fm.) Looking at their schedule, it appears they're starting over with show 0001 on Monday the 1st and running them in order weeknights at about 9:05 PM EST. If you listen regularly, please send them a contribution.

Looking with Google, I see a bunch of more or less legal fan sites some of which appear to have downloadable shows.

By the way, it wasn't E. G. Marshall, it was Himan Brown.

I didn't listen, but my guess was the eclipse was too partial to really
make any difference...

I recall a total eclipse back in 1979, up in the Pacific
Northwest....some DX'ers tried
to hear long distance signals during the totality, but weren't too
sucessful. (It was
written up in QST back then too).

On the other hand, during the European eclipse in 1999, some MW-DX'ers
seemed to have *much* better luck: read
http://nrcdxas.org/idxd/idxd6630.html
(scroll way down to where it says "Eclipse DX")

5074. Y2K Version 2.001

Newsgroup: rec.radio.broadcasting
Date: 2000-12-31 02:37:37 UTC
From: "MonsterFM.com" <engineering@MonsterFM.com>
Message-ID: <t4t6vhcmgplbe8@corp.supernews.com>
Source record: 16487

This update is being written three days before the New Year. But, I must now admit, the doomsday prophets of "Y2K" were absolutely correct even if they were a bit off in their timing of the cataclysmic events which we are even now experiencing.

We are now, and have been (for nearly 10 days), running fully on our on site generator. All ISDN's are down (well, our internal ISDN equipment, as such, is functional but, the telephone company service is nowhere to be found). Not that it would make any real difference! We're using dialup connections and, on average, we're able to connect at 14.4kbs and, at best, we're getting 22kbs connections! (Remember the days when that was fast?)

Running water is a thing of the past and, the last time we tried to buy some food, we were politely declined because "The power is off and the cash register won't work without it. What? A credit card? No, I'm sorry, the telephones are out and I can't get authorization..." It almost seem that people, in the event of an extended power failure, are expected to just "hole-up" somewhere and make absolutely no financial transactions until after the emergency situation has been cleared up!

No, it's not really a "Y2K" issue. It's the "Great Ice Storm" of 2000 which has had northeast Texas (along with several other "mid-American" states) in it's grips for the past 10 days or so. We've taken a few late night trips out into this bizarre situation and have found, to our horror, that we can drive up to 10 miles or more in any direction before encountering even one electrical light. Oh, we can see candlelight from some windows but, not a single electrically powered incandescent light bulb!

The local radio station (the only one with which I'm familiar, anyway) has no idea what a standby generator is. Not a problem, though. They also have no idea what "local origination" is, either. For the past several days, we've had the profound pleasure of tuning it in and hoping to catch just a bit of weather information so that we could decide to either call the emergency "over" or to stock up on more supplies for the next phase of whatever mother nature decides to throw at us.

Thus far, we have heard some people who tell us that they are located in north Mississippi telling us all about how wonderful and glorious this day is and that we should be "rejoicing in the Lord" for the wonderful and glorious days ahead. This is all "wonderful and glorious" but, what I want to know is "Will the ice let up, tomorrow, so we can get some food? Will the power company be getting around to repairing the feeders to our area this week or next week so that I can determine how much fuel to restock for the generators?

Ok, no satisfaction from the local station. Let's try a "mid-size market" station... How about that great "Jammin' Oldies" station that

claims to have it's "finger on the pulse of the community"? Nothing there but many, many disclaimers about how "This contest is a cooperative effort of this station and over 900 other stations in over 500 other markets and over 90% of the planetary population is not qualified to participate because the winner must be a being who does not breathe an oxygen/nitrogen mixture!" Hmmm. I wonder where their finger really is spending most of it's time..
Same generic, computer generated crap on 17 different stations who all claim this area as their "service area". (I wonder how they define "service area"...) This is all going on while, according to reports we're receiving from our own scanning equipment, more than 100,000 homes are without power - probably for DAYS - with sub-freezing temperatures! But, at least they are not without those "Goodtime Oldies that Really Rock"!!!
Is there a lesson to be learned from this? Maybe. But, if you haven't already figured out what that lesson is, I'm sure you'll feel that this entire page was a rambling waste of effort...

Which BBC? The only regular BBC news sounder I'm familiar with is Radio 2's hourly open, which is part of the Groove Addicts custom jingle package they did for the net and is a quite appropriate full-orchestra (no synths anywhere in hearing, as far as I can tell) fanfare version of the Radio 2 logo. Some of the long-form World Service news shows have synthy themes, including "NewsHour," but it seems to me that short-form World Service and Radio 4 'casts have no sounders. (I haven't heard Radio 1, 3, 5 Live! or the local stations' 'casts).

Which leads me to the infamous BBC time pips, which start around 5 seconds to the hour and end with a long beep at the top of the hour. They're on World Service and Radio 4 every hour and occasionally on Radio 2 (I heard Mo Dutta bring them up before a newscast a few months ago). Which other BBC nets run the pips (and I don't mean Gladys Knight's back-up group)?

Oh, come on gang! Let's concentrate on content. You old radio die hards just cannot accept the fact that Paley is dead and Viacom owns the network. I'd like to be back in '68 too. But this is almost 2001. I"ve been in television for almost 40 years. Do I wish for the good old days of live local television with its kiddie shows, women's programming, boring Sunday morning talk shows with the president of the city council, superintendent of schools, etc.? Hell yes, well sort of. But it ain't like that anymore. We old timers have to accept change. The media caters to the 12 to 24 crowd. That's what sells time. So, join me with some oatmeal and let's kick back and listen to the Music Of Your Life. Hey, they kept the "bong", right? Actually, that always annoyed me.

Why would sounders on radio be less important than some "droid" at General Motors thinking up cup holder placements? Sometimes these are the easiest ways to create a distinctive sound without changing the guts of the format. Think of it as "fit and finish."

We've taken a few late night trips out into this bizarre situation and have found, to our horror, that we can drive up to 10 miles or more in any direction before encountering even one electrical light. Oh, we can see candlelight from some windows but, not a single electrically powered incandescent light bulb!

The local radio station (the only one with which I'm familiar, anyway) has no idea what a standby generator is. Not a problem, though. They also have no idea what "local origination" is, either. For the past several days, we've had the profound pleasure of tuning it in and hoping to catch just a bit of weather information so that we could decide to either call the emergency "over" or to stock up on more supplies for the next phase of whatever mother nature decides to throw at us.

Thus far, we have heard some people who tell us that they are located in north Mississippi telling us all about how wonderful and glorious this day is and that we should be "rejoicing in the Lord" for the wonderful and glorious days ahead. This is all "wonderful and glorious" but, what I want to know is "Will the ice let up, tomorrow, so we can get some food? Will the power company be getting around to repairing the feeders to our area this week or next week so that I can determine how much fuel to restock for the generators?

Ok, no satisfaction from the local station. Let's try a "mid-size market" station... How about that great "Jammin' Oldies" station that

claims to have it's "finger on the pulse of the community"? Nothing there but many, many disclaimers about how "This contest is a cooperative effort of this station and over 900 other stations in over 500 other markets and over 90% of the planetary population is not qualified to participate because the winner must be a being who does not breathe an oxygen/nitrogen mixture!" Hmmm. I wonder where their finger really is spending most of it's time..
Same generic, computer generated crap on 17 different stations who all claim this area as their "service area". (I wonder how they define "service area"...) This is all going on while, according to reports we're receiving from our own scanning equipment, more than 100,000 homes are without power - probably for DAYS - with sub-freezing temperatures! But, at least they are not without those "Goodtime Oldies that Really Rock"!!!
Is there a lesson to be learned from this? Maybe. But, if you haven't already figured out what that lesson is, I'm sure you'll feel that this entire page was a rambling waste of effort...

Dave's Radio Waves at San Diego Radio Info/News at
http://www.davesfunstuff.com/indexrad.htm
has these items of interest:

Polls: Best and Worst of San Diego Radio Ballot...vote online!

My views on: radiodigest.com folding, radio bits and bytes,
The Top 27 Radio/TV Stories of the Year, HDTV in San Diego, and
more in the back issues pages as well.

Excerpts from Top 27 Radio/TV Stories of the year:

A New Kind of Oldies Programming Debuts in San Diego

All 80's decade music was introduced in mid November by not one, but two radio
stations in San Diego. KBZT 94.9 and
KMSX 95.7 dropped their 60's oldies and Modern AC formats respectively in
order to bring the listeners the wide variety of
rock and modern pop music that many adults, now in their early 30's through
mid 40's, grew up enjoying.

These stations are following a hot national trend of programming all music
based on a decade two decades ago (KDEO's 50's in
1970's, KBZT's 60's in 1980's, The Beach's 70's in 1990's). While the 80's
were a rich decade as far as musical creativity was
concerned, the all 70's format bombed due to lack of listenable varitey, while
the 80's had all the great MTV-inspired rock hits
that supplanted the likes of Neil, Streisand, and the Little River Band from
the Top 40 charts by 1983.

KSDS Boosts Power

Speaking of traditional jazz, KSDS 88.3, run by the San Diego Community
College District, boosted their power from a measly
831 watts to 3,000 watts, allowing its signal to be picked up throughout most
of the county

Local Contests That Really Were National

It has been reported for the past year here and elsewhere that Clear Channel
has acted like a "cheap channel" by doctoring up
their nationwide contests such as giving away hourly $10,000 prize Thursdays
and backstage passes to the Backstreet Boys to
sound like they're local? Channel 933 is among the guilty culprits that give
out a nationwide toll-free number, and 15 minutes later,
play a tape forwarded by a Clear Channel contest headquarters somewhere in the
nation of someone screaming in excitement that

they won while a local deejay pretends to "congratulate" the winner on tape
for winning. Notice that they don't tell you where the
winner originated? Who are you fooling? Don't you hate it when they don't make
their contests perfectly "Clear" on their radio
"Channels?"

It's not really "terrible" so to speak, and I don't think there's a chance in Hell they'll bring back the old one any time soon :o

Though sometimes if they realize there's a public outcry they'll incorporate a whole new one, I suppose.

Cheers!

Scott :-)

5089. CBS news sounder

Newsgroup: rec.radio.broadcasting

I finally heard this thing - and I must say I am not impressed.
The new instrumentation has taken away the distinctive sound of CBS news.
They've mellowed it out.. it's not the simple, but sharp, notes that it used to be.
Now it sounds fuzzy and diffuse. The thing I find really bizarre about it is that it makes it hard for the anchor to know when to start reading. On more than one occasion since it's started, I've heard anchors jump the gun before the tune is over. It could have been "updated" without sounding so strange.

The Nuclear Warrior? Far more than cosmic. Positively Galactic. Possibly
even Trans-stellar.

Beam me up.

I looked at their web site. The ameristar hasn't been launched yet. Can
you still get programing in the US? Is it really portable or do you have
to be in one specific place to get the signal. I was thinking about
getting the JVC or the Panasonic. The panasonic sounds like it is a big
boom box similar to the radio ca set with detachable speakers I used in
college in my dorm room.

Like everyone else who wants to start their own netstation <g>

Can anyone tell me the URL of the site which offers that "poor man's version" of a royalty fee payment method for netcasting music? I seem to recall stumbling across such a site a long time ago, with info about a licensing agreement which said something to the effect that for a modest fee, you could netcast copyrighted music so long as you didn't repeat an artist too frequently (i.e. no more than three songs by the same artist in a 3 hour time period).

DId I just dream this site up or does it still exist?

Thanks!

Mark Jeffries <MJeffries@KRW.com> wrote:

"Which BBC?"

Lilibolero was played on the World Service just before the pips at the top of each hour.

"Which leads me to the infamous BBC time pips, which start around 5 seconds to the hour and end with a long beep at the top of the hour. They're on World Service and Radio 4 every hour and occasionally on Radio 2 (I heard Mo Dutta bring them up before a newscast a few months ago). Which other BBC nets run the pips (and I don't mean Gladys Knight's back-up group)?"

Radio 1 used the pips for a while, complete with a special top-of-the-hour jingle that included a music bed over which the pips were heard. (FWIW, the BBC pips go all the way back to 1924! They used to use a sixth pip of the same length as the others, but changed when "leap seconds" started to be used in the 1970s.)

"Santa" brought me a Sanyo DSB-WS1000, (also £99.99) and tonight I have finally set it up via a Hi-Fi separates system amplifier and stereo speakers.

Wow!!

Perfect in sound quality from reception.

Programming on WRN1 alone has Radio Vlaanderen Intl and Radio Budapest in the past hour with near CD quality reception.

Elsewhere, CNN and Rock/Pop stations trawled for sound checks.

The only drawback!??

I live in a groundfloor flat of terraced house with the terrace running in a North-South direction :. no south by south-east facing window.

I've had to position the antenna outside, in the garden on a box, in order to find a line of sight to the satellite. Hmmm.

Otherwise, bearing in mind to having an access for placing the antenna at 155 degrees azimuth to obtain a reception, this is a great receiver.

Hi, need your help on a song i'm searching. Released around 1980, song called "the fury", but who is the artist??????

lyrics go like " do you remember a long time ago, used to take you to the picture show, holding hands on a sat night, making love, while time was right......stricken by the fury..."

song was really catchy beat, male singer, any help appreciated

oh ya please email to kissrush@hotmail.com thanks

Well, it's no more outrageous an idea than programmers or consultants dreaming up (or borrowing from another market) positioning statements, or any other programming or production elements.

They have to come from *somewhere*.

I was in a meeting once where the host of a network radio talk show had me play two different themes over and over for maybe 60 minutes so he could figure out which one he wanted. After about 10 minutes, everyone else found excuses to bolt out of the room (except the host and the poor producer. I needn't tell you who the producer was).

> I also wonder if some goofball exec thinks this will impact ratings.

You'd be amazed what some people think will impact ratings.
